CDP Corporate Questionnaire 2026

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction.....	9
(1.1) In which language are you submitting your response?	9
(1.2) Select the currency used for all financial information disclosed throughout your response.	9
(1.3) Provide an overview and introduction to your organization.	9
(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years....	10
(1.4.1) What is your organization's annual revenue for the reporting period?	11
(1.5) Provide details on your reporting boundary.	11
(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?	11
(1.7) Select the countries/areas in which you operate.	14
(1.8) Are you able to provide geolocation data for your facilities?	14
(1.8.1) Please provide all available geolocation data for your facilities.	15
(1.19) In which part of the oil and gas value chain does your organization operate?	16
(1.24) Has your organization mapped its value chain?	17
C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities	19
(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?	19
(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?	20
(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?	21
(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.....	21
(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?	31
(2.3) Have you identified priority locations across your value chain?	32
(2.4) How does your organization define substantive effects on your organization?	33
(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?	35
(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.	36

C3. Disclosure of risks and opportunities 38

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	38
(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	39
(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.	46
(3.2) Within each river basin, how many facilities are exposed to substantive effects of water-related risks, and what percentage of your total number of facilities does this represent?	48
(3.3) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?	51
(3.3.1) Provide the total number and financial value of all water-related fines.	51
(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?	52
(3.5.1) Select the carbon pricing regulation(s) which impact your operations.	52
(3.5.2) Provide details of each Emissions Trading Scheme (ETS) your organization is regulated by.	52
(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?	55
(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	55
(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	56
(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.	64

C4. Governance 67

(4.1) Does your organization have a board of directors or an equivalent governing body?	67
(4.1.1) Is there board-level oversight of environmental issues within your organization?	68
(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.	68
(4.2) Does your organization's board have competency on environmental issues?	72
(4.3) Is there management-level responsibility for environmental issues within your organization?	74
(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals).	74
(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?	84
(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).	85
(4.6) Does your organization have an environmental policy that addresses environmental issues?	89

(4.6.1) Provide details of your environmental policies.	89
(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?	93
(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?	94
(4.11.1) On what policies, laws, or regulations that may (positively or negatively) impact the environment has your organization been engaging directly with policy makers in the reporting year?	96
(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.	113
(4.12) Have you published information about your organization's response to environmental issues for this reporting year in places other than your CDP response?	155
(4.12.1) Provide details on the information published about your organization's response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.	155

C5. Business strategy..... 159

(5.1) Does your organization use scenario analysis to identify environmental outcomes?	159
(5.1.1) Provide details of the scenarios used in your organization's scenario analysis.	159
(5.1.2) Provide details of the outcomes of your organization's scenario analysis.	171
(5.2) Does your organization's strategy include a climate transition plan?	173
(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?.....	175
(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.....	175
(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.	178
(5.4) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's climate transition?	180
(5.4.1) Quantify the amount and percentage share of your spending/revenue that is aligned with your organization's climate transition.	181
(5.4.2) Quantify the percentage share of your spending/revenue that was associated with eligible and aligned activities under the sustainable finance taxonomy in the reporting year.....	185
(5.4.3) Provide any additional contextual and/or verification/assurance information relevant to your organization's taxonomy alignment.	264
(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?	265
(5.5.7) Provide details of your organization's investments in low-carbon R&D for your sector activities over the last three years.	265
(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?.....	271
(5.10) Does your organization use an internal price on environmental externalities?	272
(5.10.1) Provide details of your organization's internal price on carbon.	272

(5.11) Do you engage with your value chain on environmental issues?	275
(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?	276
(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?	277
(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?	277
(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization's purchasing process, and the compliance measures in place.	278
(5.11.7) Provide further details of your organization's supplier engagement on environmental issues.	286
(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.	288
(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?	290
(5.13.1) Specify the CDP Supply Chain members that have prompted your implementation of mutually beneficial environmental initiatives and provide information on the initiatives.....	290

C6. Environmental performance - Consolidation approach 292

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.....	292
--	-----

C7. Environmental performance - Climate change 294

(7.1) Is this your first year of reporting emissions data to CDP?	294
(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?.....	294
(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?	294
(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?....	295
(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.	296
(7.3) Describe your organization's approach to reporting Scope 2 emissions.	296
(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are excluded from your disclosure of climate-related data?	297
(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions which are not included in your disclosure.	297
(7.5) Provide your base year and base year emissions.	298
(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO ₂ e?	307
(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO ₂ e?	307
(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.	308
(7.8.1) Disclose or restate your Scope 3 emissions data for previous years.	318

(7.9) Indicate the verification/assurance status that applies to your reported emissions.	319
(7.9.1) Provide further details of the verification/assurance undertaken for your Scope 1 emissions, and attach the relevant statements.	320
(7.9.2) Provide further details of the verification/assurance undertaken for your Scope 2 emissions and attach the relevant statements.	321
(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements.	324
(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?	325
(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.	325
(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?	332
(7.12) Does your organization have significant land sector activities in its operations or value chain?	332
(7.13) Does your organization choose to account for and report technological CO2 removals or captured CO2 with geologic storage, or have you done so in previous years?	332
(7.15) Does your organization break down its Scope 1 and/or Scope 2 emissions by greenhouse gas type?	333
(7.15.1) Break down your total gross global Scope 1 and Scope 2 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).	333
(7.15.4) Break down your total gross global Scope 1 emissions from oil and gas value chain production activities by greenhouse gas type.	335
(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area.	342
(7.17) Indicate which gross global Scope 1 emissions breakdowns you are able to provide.	350
(7.17.1) Break down your total gross global Scope 1 emissions by business division.	350
(7.19) Break down your organization's total gross global Scope 1 emissions by sector production activity in metric tons CO2e.	351
(7.20) Indicate which gross global Scope 2 emissions breakdowns you are able to provide.	351
(7.20.1) Break down your total gross global Scope 2 emissions by business division.	351
(7.21) Break down your organization's total gross global Scope 2 emissions by sector production activity in metric tons CO2e.	352
(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.	352
(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?	354
(7.23.1) Break down your gross Scope 1 and Scope 2 emissions by subsidiary.	354
(7.24) Report your methane emissions as percentages of natural gas and hydrocarbon production or throughput.	357
(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.	358
(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?	358
(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?	358

(7.29) What percentage of your total operational spend in the reporting year was on energy?	359
(7.30) Select which energy-related activities your organization has undertaken.	359
(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.	360
(7.30.6) Select the applications of your organization's consumption of fuel.	363
(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.	363
(7.30.9) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.	370
(7.30.14) Provide a breakdown by country/area of your electricity/heat/steam/cooling consumption in the reporting year.	372
(7.30.15) Provide details on the electricity purchases that were accounted for at a zero or near-zero emission factor in the reporting year.	386
(7.30.17) Provide details of your organization's low-carbon heat, steam, and cooling purchases in the reporting year by country/area.	415
(7.38) Disclose your net liquid and gas hydrocarbon production (total of subsidiaries and equity-accounted entities).	418
(7.38.1) Explain which listing requirements or other methodologies you use to report reserves data. If your organization cannot provide data due to legal restrictions on reporting reserves figures in certain countries/areas, please explain this.	419
(7.38.2) Disclose your estimated total net reserves and resource base (million boe), including the total associated with subsidiaries and equity-accounted entities.	419
(7.38.3) Provide an indicative percentage split for 2P, 3P reserves, and total resource base by hydrocarbon categories.	420
(7.38.4) Provide an indicative percentage split for production, 1P, 2P, 3P reserves, and total resource base by development types.	421
(7.43) Disclose your total refinery throughput capacity in the reporting year in thousand barrels per day.	423
(7.43.1) Disclose feedstocks processed in the reporting year in million barrels per year.	423
(7.43.2) Are you able to break down your refinery products and net production?	424
(7.43.3) Disclose your refinery products and net production in the reporting year in million barrels per year.	424
(7.43.4) Please disclose your petrochemicals production in the reporting year in thousand metric tons.	427
(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.	427
(7.48) Provide the intensity figures for Scope 1 emissions (metric tons CO2e) per unit of hydrocarbon category.	429
(7.52) Provide any additional climate-related metrics relevant to your business.	430
(7.53) Did you have an emissions target that was active in the reporting year?	432
(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.	432
(7.53.2) Provide details of your emissions intensity targets and progress made against those targets.	441
(7.54) Did you have any other climate-related targets that were active in the reporting year?	447
(7.54.1) Provide details of your targets to increase or maintain low-carbon energy consumption or production.	447

(7.54.2) Provide details of any other climate-related targets, including methane reduction targets.....	450
(7.54.3) Provide details of your net-zero target(s).....	463
(7.54.4) Indicate which targets reported in 7.53.1/2 incorporate methane emissions, or if you do not have a methane-specific emissions reduction target for your fossil fuel activities, please explain why not and forecast how your methane emissions will change over the next five years.	466
(7.55) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.	467
(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.	467
(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.	468
(7.55.3) What methods do you use to drive investment in emissions reduction activities?	469
(7.57) Describe your organization's efforts to reduce methane emissions from your activities.	470
(7.61) Does your organization conduct leak detection and repair (LDAR) or use other methods to find and fix fugitive methane emissions from oil and gas production activities?.....	471
(7.61.1) Describe the protocol through which methane leak detection and repair or other leak detection methods, are conducted for oil and gas production activities, including predominant frequency of inspections, estimates of assets covered, and methodologies employed.	471
(7.62) If flaring is relevant to your oil and gas production and processing activities, describe your organization's efforts to reduce flaring, including any flaring reduction targets.....	471
(7.73) Are you providing product level data for your organization's goods or services?.....	472
(7.74) Do you classify any of your existing goods and/or services as low-carbon products?	472
(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.	472
(7.79) Has your organization retired any project-based carbon credits within the reporting year?.....	476
(7.79.1) Provide details of the project-based carbon credits retired by your organization in the reporting year.....	477

C9. Environmental performance - Water security..... 498

(9.1) Are there any exclusions from your disclosure of water-related data?.....	498
(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?	498
(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?	506
(9.2.3) In your oil & gas sector operations, what are the total volumes of water withdrawn, discharged, and consumed (by business division), how do they compare to the previous reporting year, and how are they forecasted to change?	509
(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.	518
(9.2.7) Provide total water withdrawal data by source.	519

(9.2.8) Provide total water discharge data by destination.	524
(9.2.9) Indicate the highest level to which your wastewater is treated (either by your organization or a third party) before being discharged to the environment.	527
(9.2.10) Provide details of your organization’s emissions of nitrates, phosphates, pesticides, and other priority substances to water in the reporting year.	532
(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?	533
(9.4) Could any of your facilities reported in 9.3.1 have an impact on a requesting CDP supply chain member?	534
(9.5) Provide a figure for your organization’s total water withdrawal efficiency.	534
(9.11) Do you calculate water intensity for your activities associated with the oil & gas sector?	534
(9.11.1) Provide water intensity information associated with your activities in the oil & gas sector.	534
(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?	537
(9.13.1) What percentage of your company’s revenue is associated with products containing substances classified as hazardous by a regulatory authority?	537
(9.14) Do you classify any of your current products and/or services as low water impact?	538
(9.15) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.	539
(9.15.1) Provide details of your water-related targets and the progress made.	540

C13. Further information & sign off 543

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?	543
(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?	543
(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.	545
(13.3) Provide the following information for the person that has signed off (approved) your CDP response.	546
(13.4) Please indicate your consent for CDP to share contact details with the Pacific Institute to support content for its Water Action Hub to facilitate collective action in priority basins.	546

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

☒ English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

☒ EUR

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

☒ Partially privately owned and partially state owned organization

(1.3.3) Description of organization

OMV produces and markets oil and gas as well as chemical products and solutions in a responsible way and continues to develop innovative solutions with a strong focus on the circular economy. In 2025, Group sales amounted to EUR 24,3 bn. With a year-end market capitalization of around EUR 16 bn, OMV remains one of Austria's largest listed industrial companies. The majority of its roughly 22,000 employees work at its integrated European sites. OMV's purpose, "Re-inventing essentials for sustainable living," continues to guide the Company's strategic transformation toward becoming a leading provider of sustainable fuels, chemicals, and materials. It serves as a North Star for OMV's ambition to become a net-zero emissions company. To ensure this purpose is fully embedded across the organization, OMV has strengthened its values and behaviors. The OMV Group values "We care We're curious We progress" support OMV's path toward a more sustainable future. In Chemicals segment, OMV is one of the world's leading providers of advanced and circular polyolefin solutions, with total polyolefin sales of 6,5 mn t in 2025 (2024: 6.3 mn t). OMV is also a European market leader in base chemicals and plastics recycling. The Company supplies products and services worldwide through OMV and Borealis, as well as its two joint ventures: Borouge (with ADNOC, based in the UAE and Singapore) and Baystar (with TotalEnergies, based in the US). In Fuels and Feedstock, OMV operates three refineries in Europe: Schwechat (Austria) and Burghausen (Germany), both featuring integrated petrochemical production, and the Petrobrazi refinery (Romania). OMV also holds a 15% share in ADNOC Refining and in ADNOC Global Trading in the UAE. OMV's total global processing capacity amounts to around 500 kbbbl/d. Fuels and other sales volumes in Europe were 16,4 mn t in 2025 (2024: 16.2 mn t). At year-end 2025, OMV's retail network consisted of 1,708 filling stations (2024: 1,702) across eight European countries. In Energy, OMV explores, develops, and produces crude oil and natural gas in its

core regions: Central and Eastern Europe, the Middle East and Africa, and the North Sea. The divestment of its Asia-Pacific assets continued in 2025. OMV's Energy activities also include the low carbon business and the entire gas value chain. Daily hydrocarbon production was 305 kboe/d in 2025 (2024: 340 kboe/d), with a nearly equal share of liquids and natural gas. InGas Marketing Power, OMV markets and trades natural gas and power in several European countries and continues to expand its LNG business. OMV holds a 65% stake in the Central European Gas Hub (CEGH) and operates natural gas storage facilities with a capacity of around 30 TWh in Austria and Germany, as well as a gas-fired power plant in Romania. Water: OMV uses significant amounts of water for its Upstream and Downstream operations. Freshwater is used for drilling, steam generation, cooling, and other industrial processes. Smaller amounts of water are also used for non-industrial purposes. Produced water (water associated with oil and gas) is treated and reinjected to maintain reservoir pressure, while desalinated water is used in certain offshore operations. Refineries and other facilities also use brackish and/or recycled water. Some of OMV's operating facilities are located in water-stressed areas. OMV's water management aims to reduce water consumption, to utilize water resources efficiently, and to treat wastewater appropriately. Water management is a key component of our social license to operate. We engage and cooperate with local communities, and act as responsible partners. OMV's water management activities pursue socially equitable water use, and OMV regularly carries out supplier audits to ensure compliance with our human rights requirements.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

12/31/2025

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

☒ Yes

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

☒ Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

☒ Not providing past emissions data for Scope 1

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

☒ Not providing past emissions data for Scope 2

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

☒ 1 year

[Fixed row]

(1.4.1) What is your organization’s annual revenue for the reporting period?

24308000000

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: ☒ Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

XS3225966939

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

AT0000743059

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

670875509

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

OMV

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

B0Z52N6

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

549300V62YJ9HTLRI486

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

Other unique identifier

(1.19) In which part of the oil and gas value chain does your organization operate?

Oil and gas value chain

☒ Chemicals

- ☒ Downstream
- ☒ Midstream
- ☒ Upstream

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

- ☒ Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

- ☒ Upstream value chain
- ☒ Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

- ☒ Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

- ☒ Tier 2 suppliers

(1.24.7) Description of mapping process and coverage

OMV's value chain is structured according to the main products that are supplied on the one hand and the steps along the value chain on the other hand. For each impact, risk and opportunity these two dimensions were considered in the assessment. For the Upstream section of the Value Chain total spend was analysed by suppliers, their geographical distribution and purchase categories. The analysis of Own Operations primarily covers the geographical footprint and the targeted strategic development, which are assumed to be important for the assessment of impacts, risks and opportunities. For the Downstream section of the value chain the analysis focuses on the geographical concentration and the key industries of OMV's customers.

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

1

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The short-term risks are analyzed in the context of the annual forecast plan and the financial implications of such risks, if materialized, on the company financial plan. This approach applies in a similar manner for all the risk categories identified across the organization. Short-term refers to up to one year and includes immediate operational efficiencies, positive environmental effects, and short-term economic contributions to local communities.

Medium-term

(2.1.1) From (years)

1

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The mid-term risks are analyzed in the context of the midterm plan and the financial implications of such risks, if materialized, on the company financial plan. This approach applies in a similar manner for all the risk categories identified across the organization. Medium-term impacts, spanning up to five years, involve more significant shifts such as reductions in carbon emissions, improvements in working conditions, and advancements in renewable energy investments. The effects of strategic shifts toward sustainability and circular economy practices will become more evident in this period.

Long-term

(2.1.1) From (years)

5

(2.1.2) Is your long-term time horizon open ended?

Select from:

☒ No

(2.1.3) To (years)

25

(2.1.4) How this time horizon is linked to strategic and/or financial planning

The long long-term risks are analyzed in the context of the strategic objectives, with a wider range of uncertainty identified for a time horizon that expands at least till 2030 (in line with our Strategy) therefore evaluated using a semi-quantitative concept. This also considers our ambition to become a net zero company by 2050. Long-term impacts, with a time horizon longer than five years, focus on achieving net zero emissions by 2050, substantial environmental restoration, and lasting socio-economic benefits through sustainable development practices and technologies. These time frames reflect OMV's strategic planning and regulatory compliance efforts).

(2.2.2.17) Has this process changed since the previous reporting year?

Select from:

- ☒ No

(2.2.2.18) Further details of process

The assessment of physical climate risks follows the Enterprise-Wide Risk Management process. Group Sustainability and Corporate Risk Management collaboratively coordinate a comprehensive analysis of these risks, focusing on several key aspects. They begin by selecting a list of climate change hazards specific to the geographical locations of OMV's own business operations, based on Commission Delegated Regulation (EU) 2021/2139. Additionally, they evaluate the lifespan of the assets and businesses at risk. The approach to risk management is then developed while bearing in mind that the potential impacts of climate change risks may change over the duration of the business or asset's life. With the support of an external consultant who has extensive knowledge and experience, OMV models the physical climate risks, focusing on surface water and riverine flooding, coastal inundation, soil movement, extreme wind, wildfire, freeze-thaw, and extreme heat. The climate change model projects how selected climate-related perils could evolve over time and quantifies the physical damage that could be expected for the asset portfolio. The peril severity is mapped with the percentage of property damage for each asset included in the analysis to understand the potential estimated financial loss, considering the standardized archetypes used to represent OMV asset specifications. The main climate-related risks and opportunities (transition and physical) are considered by OMV in its strategic planning or risk management process to determine potential financial implications. The frequency and severity of natural hazards were determined according to the following IPCC climate change pathways: RCP 8.5, a very high baseline emission scenario referred to as "business as usual," and RCP 4.5, an intermediate emission scenario where global emissions peak around 2040 and decline, stabilizing greenhouse gas concentration by 2100. The transition risks and opportunities are assessed over short-, medium-, and long term time horizons in the context of the OMV strategy and business model. The following types of transition risks and opportunities are assessed: - Regulatory, related to policies that promote adaptation to climate change or limit the actions that contribute to the adverse effects of climate change (challenges related to value chain adaptation to the regulatory changes). - Technological, capturing the downside and upside potentials emerging from technological improvements or innovations that support the transition to a lower-carbon future or energy efficiency. - Market uncertainties, with a focus on positive or negative market shifts for certain commodities, products, or services (e.g., carbon pricing, oil and gas product demand). - Reputation, driven by changes in consumer behavior, perceptions of OMV's contribution to the transition to a sustainable economy, or detracting from the transition to a lower-carbon economy. For the supply chain, an indication of exposure to physical climate-related risks is obtained using a set of climate change risk indicators mapped to the suppliers and their allocated countries, in conjunction with the type of services and products supplied. The value chain assessment helps OMV understand its geographical concentration and identify key vulnerabilities along the supply chain, leading to the identification of adaptation measures that increase resilience to short-term challenges and megatrends.

(2.2.2.17) Has this process changed since the previous reporting year?

Select from:

☒ No

(2.2.2.18) Further details of process

The impacts, risks, and opportunities are assessed based on a robust environmental governance framework, with business division-level information considered for the top-down qualitative assessment. The assessment process to scientifically delimit areas at water risk is ongoing, with further details to be analyzed based on the LEAP (Locate, Evaluate, Assess, Prepare) approach and other tools such as the WWF Water Risk Filter and the Aqueduct Water Risk Atlas tool from the World Resources Institute (WRI). OMV realized that water impacts and risks are caused not only by the company's own water use and discharge, but also by the catchment/ basin context in which the company operates. For a systematic water assessment and management, OMV applies TNFD approach developed to address all nature-related issues, known as the LEAP approach (Locate, Evaluate, Assess and Prepare). The locate phase is the basin risk assessment of the latest/ 2024 version of the WWF WRF and covers physical, regulatory and reputational water related Impacts and risks that affect the locations. WWF Water Risk Filter contains a total of 42 basin indicators which are based predominantly on freely available external, peer reviewed dataset. The Evaluate phase is the operational assessment of the latest/ 2024 version of the WWF WRF it covers physical, regulatory, and reputational water related Dependencies and Impact. A site's operational related risk and impact is based on its proprietary characteristics as a water user. Operational water risk is assessed by filling in the WWF Water Risk Filter Operational Risk Questionnaire, answered and completed at site level. The value chain analysis in the evaluation. To identify operations along the value chain with nature sensitivities, such as activities in areas at risk of water scarcity or water stress, Verisk Maplecroft's Water Stress Index was considered, the aim being to screen the state of nature including water resources. For an objective and consistent analysis, the service or products' country of origin is combined with about water national risk indices, to provide a robust value chain assessment. The suppliers and customers are prioritized using the following criteria: - Level of risk indices proposed by Maplecroft, - The segmentation of partners per each topic based on the type of service or product provided, - The total spending for respective year linked with the risk score, - The criticality/ importance of the partner for OMV business. The outcome of the evaluation step provides valuable insights for an informed decision-making related to OMV Group suppliers' portfolio, ensuring that risk management strategies are aligned with the OMV's objectives and related tolerance levels. The portfolio analysis is done once a year, with the criteria above being reviewed to reflect an updated business context and the external tools available. In case of a significant change in OMV business affecting the suppliers or customers portfolio, an ad-hoc analysis will be performed.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

☒ Yes

(2.2.7.2) Description of how interconnections are assessed

OMV systematically assesses interconnections between environmental dependencies, impacts, risks and opportunities across climate, water and biodiversity & ecosystem services embedded in our EWRM and IRO management processes. • **Climate:** Physical climate risks are assessed following our enterprise risk management process. We develop a comprehensive list of climate risks based on EU Commission Delegated Regulation (EU) 2021/2139 climate related hazards and analyse vulnerability of OMV's business under different emission scenarios and time horizons using external, reliable data and tools. • **Water:** Responsible water stewardship is managed using the TNFD LEAP approach with the WWF Water Risk Filter (WRF). We conducted a comprehensive TNFD LEAP (Locate, Evaluate, Assess, Prepare) assessments for water for all operated sites, considering water basin risk and operational risks. • **Biodiversity & Ecosystem Services:** Similar to the approach applied to water-related topics, dependencies, impacts, risks, and opportunities related to biodiversity and ecosystem services beyond water use are assessed across all operated sites using the TNFD LEAP framework. Priority sites are identified based on biodiversity sensitivity and potential pressures on nature. These sites are then subject to more detailed assessments. The most significant impacts and dependencies identified form the basis for the assessment of nature-related risks and opportunities. Within EWRM and the IRO register, dependencies, impacts, risks and opportunities are explicitly linked: • Each risk/opportunity is mapped to one or more underlying impacts/consequences. • The register reflects causal pathways, not parallel lists. • Governance ensures impact to risk pathways are identified and that responses address root causes, not symptoms.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

☒ Yes, we have identified priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

☒ Direct operations

(2.3.3) Types of priority locations identified

Sensitive locations

☒ Areas important for biodiversity

- ☒ Areas of high ecosystem integrity
- ☒ Areas of limited water availability, flooding, and/or poor quality of water

Locations with substantive dependencies, impacts, risks, and/or opportunities

- ☒ Locations with substantive dependencies, impacts, risks, and/or opportunities relating to water
- ☒ Locations with substantive dependencies, impacts, risks, and/or opportunities relating to biodiversity

(2.3.4) Description of process to identify priority locations

We have mapped OMV sites against biodiversity-sensitive areas and areas under water stress and conducted LEAP assessments for biodiversity & ecosystems services and water. Baseline state of nature for all OMV sites was assessed via geospatial and risk analysis using advanced tools, such as IBAT, WDPA and WKBA as well as Aqueduct Baseline water stress and WWF Water risk filter. To identify priority sites we consider both, proximity to sensitive areas (biodiversity & water), as well as OMV operational data (emissions, water use, etc.)

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

- ☒ Yes, we will be disclosing the list/geospatial map of priority locations

(2.3.6) Provide a list and/or spatial map of priority locations

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

☒ Yes, we identify and classify our potential water pollutants

(2.5.2) Details of policies and processes in place to identify and classify potential water pollutants

OMV's EM Standard requires all OMV businesses and activities to minimize the impact of effluent on the environment and on local communities, and outlines specific requirements for wastewater discharge onshore and offshore. Every location in OMV must develop, implement, and maintain a Water Management Plan, which should include at least the following elements: the scope and objectives, including a site description; applicable legislation, other requirements, and permits; identification of water sources, discharges, including water quality parameters, and monitoring plans; a water map, inventory, and balance, including discharges; water transport, storage, and treatment systems; significant water-related risks and mitigation measures; and water conservation and water efficiency measures, including an action plan. Each plan must specify discharge parameters such as Total Nitrogen (TN), arsenic, Cu, Ni, chlorides, Zn. A new version of water management plan template will be available to ensure more compliance with ISO 46001.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

☒ Oil

(2.5.1.2) Description of water pollutant and potential impacts

Water management-related risks are closely linked with the topic of spill prevention, onshore and offshore. Offshore operations may lead to oil spills that have a significant impact on marine water resources and ecosystems.

(2.5.1.3) Value chain stage

Select all that apply

☒ Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

☒ Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience

- ☒ Industrial and chemical accidents prevention, preparedness, and response

(2.5.1.5) Indicators for measuring and evaluating the success of the procedure

Select all that apply

- ☒ Compliance with discharge permits / regulatory limits

(2.5.1.6) Please explain

We aim to prevent and reduce oil spills and leakage in our operations at sea as well as on land. Appropriate spill prevention and control plans that account for specific business conditions have been put in place and are summarized in the Spill Preparedness and Response Planning annex of our Environmental Standard. These include soil and water monitoring plans and proactive management plans comprising risk assessments, preventive measures, and inspections, as well as reactive management plans comprising control, response, and clean-up procedures. The majority of our oil spills involve OMV Petrom's Exploration Production division, where we concentrate our efforts on safeguarding and maintaining our infrastructure and improving the reliability of our facilities. As a result of pipeline integrity management program the total spill volume released in 2025 was reduced by 72% compared to 2024.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

☒ Yes, only in our upstream/downstream value chain

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

While transition risks related to climate change may have a substantive effect on our operations, the source of these risks lies in our value chain (see response to 3.1.1). Material climate change risks which directly occur in OMV's operations include physical climate risks. Their assessment is an integral and continuous part of the Enterprise-Wide Risk Management process. OMV modeled the potential exposure of our assets to climate-related hazards focusing on surface water and riverine flooding, coastal inundation, soil movement, extreme wind, wildfire, freeze-thaw, and extreme heat. For 2025, the result of the physical risk assessment indicates that the assets analyzed will be largely unaffected by any of the natural hazards until the middle of the century. Up to 2030, the OMV assets analyzed won't need to adapt to unavoidable impacts of climate change, which confirms that OMV's portfolio is climate-resilient on short-, medium-, and long-term time horizons.

Water

(3.1.1) Environmental risks identified

Select from:

☒ Yes, only within our direct operations

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Environmental risks exist, but none with the potential to have a substantive effect on our organization

(3.1.3) Please explain

Insufficient water availability and consequently poor water quality, could cause a temporary business interruption. Also, freshwater withdrawals for products and services, especially in water-stressed regions, can have significant impact on the availability of water for ecosystems and local communities. Such impact relates were analyzed, under the RCP 4.6 and 8.5 scenario (IPCC) with a long-term implication. Declining water supply as a result of others usage of the watershed or ground, could have implications on the OMV business. This is also a long-term risk beyond 2030. Lack or slow adaptation of the environmental regulations along the OMV supply chain affects OMV ability to implement its principles and commitments to SDG15. Pollution impacts from incidents arises from routine or non-routine activities could lead to pollution which may result in severe environmental and social consequences. Pollution from plastic pellet spills and improper handling of plastic waste can negatively impact people and the environment.

(3.1.1.9) Organization-specific description of risk

This climate change related transition risk refers to risk related to market uncertainty driven by the potential systemic changes to our business model beyond 2030 mainly from the substitution of OMV's products following changes in consumer behavior. The "net zero emissions by 2050" scenario used in this analysis does not include any changes to input factors other than prices and volumes.

(3.1.1.11) Primary financial effect of the risk

Select from:

- ☒ Decreased asset value or asset useful life leading to write-offs, asset impairment or early retirement of existing assets

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ Long-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- ☒ More likely than not

(3.1.1.14) Magnitude

Select from:

- ☒ High

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

3.1 Billion Euro

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

100000000

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

3300000000

(3.1.1.25) Explanation of financial effect figure

The “net zero emissions by 2050” sensitivities for oil and gas assets were calculated using a simplified method and are based on a discounted cash flow model in line with the impairment testing calculations. The cash flows are based on adjusted mid-term planning for the next five years and life of field planning for the remaining years until abandonment. The “net zero emissions by 2050” case does not include any changes to input factors other than prices and volumes. The calculation considers an earlier economic cut-off date for oil and gas fields if the revenues impacted by lower prices are not sufficient to cover the costs. But it especially does not take into account any restructurings, cost reduction measures, divestments, or other changes in the business plans that are not included in the base case. The amounts presented therefore should not be seen as a best estimate of an expected impairment impact following such a scenario. The CO2 costs considered for oil and gas assets are based on the CO2 prices in the IEA NZE by 2050 scenario. CO2 costs are included for 100% of OMV’s share of direct emissions, except for emissions from E&P Austria and Romania where CO2 costs are only considered to the extent that the activities are within the scope of the European Emissions Trading Scheme (ETS) in the years until 2030 and for 100% of OMV’s share of direct emissions after 2030. The sensitivities calculated based on the “net zero emissions by 2050” case indicate that there is a risk of impairments of oil and gas assets. The carrying amounts of the oil and gas assets with proved reserves (incl. E&P at equity investments) would decrease by EUR 3.3 bn and goodwill would decrease by EUR 0.1 bn. In addition, all oil and gas assets with unproved reserves would be abandoned with a pre-tax loss of EUR 0.2 bn. The total post-tax impact on profit or loss would be EUR 2.6 bn.

(3.1.1.26) Primary response to risk

Diversification

☒ Develop new products, services and/or markets

(3.1.1.27) Cost of response to risk

2600000000

(3.1.1.28) Explanation of cost calculation

Calculated as CAPEX from 2026-2028 contributing to OMV's decarbonisation levers. Based on key actions requiring CAPEX of EUR ≥5 mn for their implementation (see OMV Annual Report 2025 p. 164 and 165 for further details).

(3.1.1.29) Description of response

The CAPEX is used to (1) increase zero-carbon sales, especially renewables in support of OMV Petrom's ambition to become a leading power market player in Southeast Europe and geothermal projects and (2) improve operational efficiency, including energy efficiency programmes, electricity generation from renewables and other Scope 1&2 reductions. Further, OMV plans to transform its European refineries so that they will stay competitive as the decarbonization of the fuels and chemicals sector progresses (see OMV Annual Report 2025 pages 69, 165 and 388 for further details).

Select all that apply

- ☒ Unknown

(3.1.1.9) Organization-specific description of risk

OMV uses significant amounts of water for its operations in its upstream and downstream activities. Freshwater is used for processes such as drilling, steam generation, and cooling, among others. Smaller amounts of water are also used for non-industrial purposes. Desalinated water is used in some offshore operations. Refineries and various other operating facilities also use brackish and/or recycled water for various operational purposes. Some of OMV's operating facilities are located in water stress areas. OMV is operating in countries that could be affected by climate change, mainly due to changes in precipitation, more frequent drought periods and increased water stress. Intensified water scarcity could be a risk to OMV activities, e.g., in countries of the Middle East which are already experiencing certain water stress. Operations may be impacted by reduction in physical availability of water, water regulatory frameworks, stakeholder conflicts concerning water resources, higher water costs or limitations in license to operate.

(3.1.1.11) Primary financial effect of the risk

Select from:

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

25000000

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

25000000

(3.1.1.25) Explanation of financial effect figure

The time horizon of significant physical climate change impacts exceeds the lifetime of most of our current operations in the region, and there is a big uncertainty about how the OMV portfolio will look like beyond 2030. There is also much uncertainty about the magnitude of impact, e.g., access to water needed for production due to local availability of water, future technical requirements and possibilities, local legal framework and possibility to obtain water licenses from authorities. For the estimation of financial implication, a production level and related financial figures equal to the reporting year have been assumed. The basis for this estimation is the potential business interruption in case OMV doesn't have access to the water resources for normal operations in low/ no precipitation periods might result in the

necessity to stop temporary our facilities. potential additional costs of approx 2EUR per cubic meter of water transported from other sources than the conventional ones (e.g. other underground water wells).

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

☑ Implementation of environmental best practices in direct operations

(3.1.1.27) Cost of response to risk

169330000

(3.1.1.28) Explanation of cost calculation

The basis for this estimation is the potential business interruption in case OMV doesn't have access to the water resources for normal operations in low/ no precipitation periods might result in the necessity to stop temporary our facilities. The costs of response to the risk is 169,33 mn EUR based on 2025 spending for water-related costs in Middle East-Africa, AT & RO: Environment Investments: 47,15mn EUR • Waste water 18,78mn EUR• Soil and groundwater 28,37mn EUR; Operating costs: 122,18 mn EUR • Waste water 16,15mn EUR • Soil and groundwater 106,03mn EUR The basis for this estimation is the potential business interruption in case OMV doesn't have access to the water resources for normal operations in low/ no precipitation periods might result in the necessity to stop temporary our facilities.

(3.1.1.29) Description of response

A bottom-up approach in water-related risk assessments is taken in accordance with OMV's Group-wide Environmental Risk Assessment. Overall, OMV is committed to utilize current and future water supplies efficiently and sustainably. Case study: (STAR) •S: Intensified water scarcity could be a risk to OMV Upstream activities •T: Identify priority sites in terms of water stress & manage water stress risk •A: High-level water stress assessments conducted on annual basis. OMV uses international tools & indexes, e.g. Verisk Maplecroft's "Water Stress Index" complemented by WRI Aqueduct "Baseline Water Stress" index, and own assessments to identify operations in areas affected by water stress & scarcity. Operating facilities located in affected areas/likely to be affected by water scarcity issues, and operations utilizing significant water resources (Tunisia, Yemen) are prioritized when developing and implementing water management plans (WaMP). These plans allow sustainable long-term production with minimal effects on the environment. •R: As part of the WaMP, detailed water inventory was done, and freshwater saving and discharge quality improvement projects were identified e.g., reduce water consumption, utilize water resources efficiently, and treat wastewater appropriately minimizing the impact on the environment and local communities. We are currently developing new processes for water assessment of impacts, dependencies, risk & opportunities. Water withdrawn from all areas with water stress was 3153 megalitres in 2024 to 3490 megalitres in 2025.

(3.5.2.11) Comment

System name: New Zealand Emissions Trade Scheme (NZ ETS). The stated verified emissions represent the OMV share of the ETS emissions from Maari, Maui and Pohokura. The allowances refer to New Zealand Emission Units (NZUs)

[Fixed row]

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

OMV maintains a low-risk CO2 trading strategy. This trading strategy was elaborated in a cross-functional team with representatives from affected business units, subject matter experts and the trading department. It is an integral part of OMV's hedging of financial risks. It foresees, e.g., rollover ("banking") of existing certificates for the future gap and hedging the future certificate gap. In addition, OMV ETS sites identify and implement CO2 emission reduction measures and perform energy saving programs/projects. OMV uses an internal carbon price, which is further described in the response to question 5.10.1.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.6.1) Environmental opportunities identified

Select from:

☒ Yes, we have identified opportunities, and some/all are being realized

Water

(3.6.1) Environmental opportunities identified

Select from:

☒ No

(3.6.2) Primary reason why your organization does not consider itself to have environmental opportunities

Select from:

☒ Opportunities exist, but none anticipated to have a substantive effect on organization

(3.6.3) Please explain

Opportunities that have the potential to provide a substantive benefit are considered and addressed across the company within the framework of OMV's bi-annual group-wide Enterprise Wide Risk Management (EWRM) process. The risk matrix used for assessing risks is mirrored for opportunities, ranking and displaying opportunities by their impact and likelihood from very low to very high. OMV is utilizing water in its processes. OMV committed to an efficient use of water and to reduce its water withdrawal Over the last years a number of projects have been implemented already to increase the water efficiency especially in our operations in Romania. OMV's refineries in Austria and Germany are utilizing water with a high efficiency. Thus, the major potential for opportunities to increase the water efficiency and subsequently reducing costs is already exhausted and implemented. Additional effort will be by enhancing the requirement to ensure efficient water management in all sites by implementing the ISO 46001 requirement under OMV sites water management plans

[Fixed row]

2640000

(3.6.1.23) Explanation of financial effect figures

The financial impact refers to the optimized air preheating process at steam boiler 5 in power plant Schwechat refinery.

(3.6.1.24) Cost to realize opportunity

10600000

(3.6.1.25) Explanation of cost calculation

Cost to realize the opportunity: 10,6 Mn EUR. Detailed cost breakdown is unavailable to disclose.

(3.6.1.26) Strategy to realize opportunity

Case Study Energy efficiency measures in OMV operations are closely linked with technical improvements directed at reducing energy use while achieving the same operational output. Process optimization and increasing energy efficiency to reduce costs and CO2 emissions are also a priority at our refineries. In 2025, for example, at the Schwechat refinery, this includes optimization of Boiler 5 in HKW1, which resulted in an increase in the efficiency.

(3.6.1.8) Organization specific description

OMV and Wien Energie are joining forces to deliver the heating transition: In a joint venture called “deeep” (Wien Energie: 51%, OMV 49%), the two companies are working closely together to make deep geothermal energy a reality in the greater Vienna area. They want to develop deep geothermal plants with output of up to 200 MW, thereby generating climate-neutral district heating for the equivalent of up to 200,000 Viennese households. The first deep geothermal plant in the area of Seestadt Aspern is the first major project to be realized together by the partners in the joint venture. Drilling and well testing is completed. Production will start in 2029. The plant will generate up to 20 MW of climate-neutral district heating – in combination with heat pumps from Wien Energie. The aim is to supply up to 20,000 Viennese households with district heating from this plant. New phase of the project – Donaustadt with the target capacity of 60MW will start drilling in 2027.

(3.6.1.9) Primary financial effect of the opportunity

(3.6.1.21) Anticipated financial effect figure in the long-term - minimum (currency)

6000000

(3.6.1.22) Anticipated financial effect figure in the long-term – maximum (currency)

8000000

(3.6.1.23) Explanation of financial effect figures

DEEEP geothermal project is expected to generate long-term financial benefits through the replacement of fossil fuel-based energy with renewable geothermal energy. Anticipated positive financial effects include reduced energy procurement costs, lower exposure to carbon pricing and energy price volatility, improved operational efficiency, and reduced greenhouse gas emissions. The minimum and maximum financial effect figures reflect the range of potential outcomes based on different assumptions regarding energy prices, carbon costs, project performance, and implementation timelines. The financial impact is expected to materialize over the long term as the project reaches full operational capacity.

(3.6.1.24) Cost to realize opportunity

28000000

(3.6.1.25) Explanation of cost calculation

The OMV share (49%) for the CAPEX of project "Hydros Seestadt" is 28 mn EUR. The cost comprises drilling, completion of the wells, pumps, and connection to the district heating grids

(3.6.1.26) Strategy to realize opportunity

Wells successfully drilled and tested. Surface facility to be finalized by end 2028. Production start Q1 2029.

C4. Governance

(4.1) Does your organization have a board of directors or an equivalent governing body?

(4.1.1) Board of directors or equivalent governing body

Select from:

☒ Yes

(4.1.2) Frequency with which the board or equivalent meets

Select from:

☒ More frequently than quarterly

(4.1.3) Types of directors your board or equivalent is comprised of

Select all that apply

☒ Executive directors or equivalent

☒ Non-executive directors or equivalent

☒ Independent non-executive directors or equivalent

(4.1.4) Board diversity and inclusion policy

Select from:

☒ Yes, and it is publicly available

(4.1.5) Briefly describe what the policy covers

The main considerations in selecting the members of the Supervisory Board are relevant knowledge, personal integrity, and experience in executive positions. Furthermore, aspects of the diversity of the Supervisory Board with respect to the internationality of the members, the representation of both genders, and the age structure are taken into account. The Supervisory Board includes five women and six non-Austrian nationals (as per December 31, 2025). The members of the Supervisory Board are aged between 40 and 68. The Executive Board and Supervisory Board consider the described measures and programs for fostering the diversity of the workforce as a key factor in strengthening the diversity of the internal pool of Executive Board succession candidates. The Presidential and

Nomination Committee concerns itself regularly with the identification and development of high-potential employees. In addition to internal succession planning, the Supervisory Board also makes use of external recruitment in order to best fill open Executive Board positions. When selecting Executive Board members - be it internally or externally - special attention is paid to the balance of gender, age, and international experience, in addition to professional skills.

(4.1.6) Attach the policy (optional)

(4.1.2.7) Please explain

OMV operates under a two-tier governance structure consisting of the Executive Board (EB) and the Supervisory Board (SB). The EB is responsible for setting & implementing the company's strategy, incl. climate related targets, and holds accountability for achieving OMV's strategic and sustainability objectives. The SB, elected by the Annual General Meeting, is OMV's highest governing body and oversees, advises, and evaluates the EB, including on climate related performance. Climate governance is fully integrated into OMV's overall corporate governance framework. Climate and broader ESG criteria form part of the Capital Allocation Framework, and ESG due diligence is embedded into mergers and acquisitions. Oversight of climate related impacts, risks, and opportunities is ensured through several dedicated committees, regular reporting cycles, and structured decision making processes. The Supervisory Board's Sustainability & Transformation Committee (STC) plays a central role in climate oversight. Meeting quarterly, the STC reviews OMV's climate strategy, climate related targets, transition pathways, risk exposure, and performance. It also monitors progress on OMV's climate, water and other ESG targets. The STC Chair provides quarterly updates to the full SB. The SB Audit Committee monitors the effectiveness of OMV's internal control, internal audit, and risk management systems, including climate related risks. It reports its findings to the SB. The Executive Board meets at least every two weeks and oversees OMV's risk management processes, ensuring a strong risk culture across the company. Corporate functions responsible for climate and other material sustainability matters report regularly to the EB on the implementation of OMV's Sustainability Framework and progress toward climate targets. The SB Remuneration Committee evaluates EB performance, incl. climate related criteria. OMV's Remuneration Policy (effective 2024) integrates GHG reduction targets and ESG metrics into both the annual bonus and the Long Term Incentive Plan (LTIP), ensuring alignment between executive incentives and climate ambition. Under the EB, the Risk Committee (RC) and the Sustainability Coordination Forum (SCF)—both chaired by the CFO—support climate governance at operational and strategic levels. •The RC ensures that OMV's risk management process effectively identifies, assesses, and manages material climate related risks, and reports risk profiles to the EB and the Audit Committee. •The SCF coordinates OMV's sustainability and transformation agenda, monitors progress on climate targets, proposes corrective measures when deviations occur, and prepares climate related matters for EB and SB discussions. The SCF meets at least every two months. Through this governance structure, OMV ensures that climate related impacts, risks, & opportunities are systematically identified, assessed & integrated into strategic decision making, performance management, and executive oversight.

(4.1.2.7) Please explain

OMV manages water related issues within its established two-tier governance structure, consisting of the Executive Board (EB) and the Supervisory Board (SB). The SB, elected by the Annual General Meeting and complemented by employee representatives, is OMV's highest governing body. It appoints the EB, oversees and advises on strategic decisions, and evaluates EB performance, including sustainability related criteria. Oversight of water related impacts, risks, and opportunities (IROs) is embedded into OMV's broader sustainability governance. The Supervisory Board's Sustainability & Transformation Committee (STC) plays a central role in this process. Meeting quarterly, the STC has a fixed agenda item for climate related topics and reviews water related topics at least annually. It monitors OMV's sustainability strategy, ESG standards, and progress toward climate, water and other ESG targets. The STC Chair provides quarterly updates to the full SB. The SB Audit Committee oversees the effectiveness of OMV's internal control, internal audit, and risk management systems, incl. ESG related risks that may involve water availability, regulatory developments, or operational water efficiency. The EB is responsible for implementing OMV's strategy, incl. water related commitments. It meets at least every two weeks and receives regular and ad hoc reports from corporate functions responsible for material sustainability matters. These functions

report on the implementation of OMV's Sustainability Framework, incl. water related targets, operational water efficiency measures, and progress on water withdrawal reduction. Under the EB, two committees chaired by the CFO support water governance: •The Risk Committee (RC) ensures that OMV's risk management process identifies, assesses, and manages material water related risks, such as water scarcity, regulatory changes, or operational disruptions. The RC is updated twice a year on key impacts, risks, and opportunities, reviews mitigation effectiveness, and reports risk profiles to the EB and the Audit Committee. •The Sustainability Coordination Forum (SCF) coordinates OMV's sustainability and transformation agenda across the Group. It consists of senior managers responsible for material sustainability matters and business representatives. The SCF monitors progress on water related targets, proposes corrective measures in case of deviations, and prepares water related topics for EB and SB discussions. It meets at least every two months. Water related considerations are also integrated into OMV's Capital Allocation Framework and ESG due diligence processes, ensuring that water IROs are systematically incorporated into investment decisions&strategic planning. Through this governance structure, OMV ensures that water related IROs are consistently overseen at the highest levels, embedded into strategic decision making, and monitored through regular reporting cycles and dedicated committees.

OMV's CEO is the Chairman of the Executive Board (EB) and is responsible for the management and coordination of OMV Group. Within OMV's Sustainability Framework, five strategic focus areas have been established: Net-Zero Transformation, Natural Resources Management, Health and Safety, People and their Human Rights, and Ethical Business Practices. Ultimate responsibility for Carbon Emissions Reduction lies with OMV's EB. The CEO is responsible for overall management and coordination and is therefore responsible for overseeing climate-related issues, which also includes integrating climate-related issues into the strategy, developing a climate transition plan (along with the other members of the EB), setting climate-related corporate targets etc. OMV's EB members meet at least quarterly to discuss current and upcoming environmental, climate, and energy-related policies and regulations, related developments in the fuels and gas market, the financial implications of carbon emissions trading obligations, the status of innovation project implementation, and progress on achieving sustainability related targets.

The EB's remuneration is tied to achievement of the GHG emission reduction targets. At Group level, responsibility for ESG governance lies with the Group Sustainability team. The team works in close collaboration with the Group functions responsible for implementing OMV's Sustainability Framework. Group functions develop and steer the processes relevant to the implementation of activities relating to social and environmental performance and propose an action plan to functional experts in related business units on the ground. Each Group function reports directly to the Board on social and environmental issues. They include reporting on progress in the implementation of the Sustainability Framework and related targets, presenting important events regarding the material topics, and submitting for approval implementation plans for sustainability initiative.

CFO - member of the EB responsible for oversight over all financial issues of OMV Group & chairs the Risk Committee (quarterly meetings) & SCF (bi-monthly meetings). Being a member of the EB, responsible for risk oversight, ensuring that management has put in place a rigorous process for identifying, prioritizing, managing, & monitoring the critical risks affecting the Company. CFO is responsible for coordinating the development of the sustain. agenda across OMV, monitoring the progress on climate, water & other ESG target achievement, proposing measures in the event of deviations, & preparing sustainability matters to be discussed by the EB & SB. EB members regularly (at least quarterly) discuss current & upcoming environmental, climate, & energy-related policies & regulations, rel. developments in the fuels, chemicals, & natural gas markets, financial implications of carbon emissions trading obligations, status of innovation project implementation, & progress on achieving sustainability-related targets. OMV focuses on assessing the potential vulnerabilities of the Company to climate change (e.g., water deficiency, droughts, floods, landslides), impact of the Company on the environment, & mitigation actions that will ensure a successful transition to a low-carbon environment (e.g., carbon emission reductions, compliance with new regulatory requirements). The short- & mid-term physical vulnerabilities rel. to climate change are identified & reported in the Enterprise-wide Risk Management process; they do not exceed OMV's reporting threshold. OMV has performed a robust climate & vulnerability assessment for most of its main assets to identify its resilience to physical risks rel. to climate change using IPCC scenarios corresponding to the time horizon suggested by the EU tax. Each Group function reports directly to EB on rel. social & environmental issues. They incl. reporting on progress, presenting updates on material topics and submitting for approval implement. plans

At Group level, responsibility for environment topics: management, reporting, etc. lies with the Group HSSE team, an area overseen by the CEO. The HSSE team ensures the safety of people, the security of operations, and the protection of the environment. Among other responsibilities, this team is tasked with implementing OMV's commitment to respect water as a precious and limited resource, focusing on its sustainable and efficient use, and minimizing the impact of water use by reducing freshwater withdrawals, especially in water-scarce areas. These commitments are included in the HSSE Strategy 2030 and are clearly outlined in our Code of Conduct and Environmental Management Standards. To ensure consistency across the Group, there are also dedicated teams in OMV Petrom and Borealis. OMV's water management is based on international standards and best practice. This ensures a consistent approach across the Group. The main tasks of the team are: • to define, implement, and manage OMV's environmental strategy process, • to conduct water-related risk screening and Group target setting, and • to define OMV's water reporting protocols and management tools. The team coordinates activities throughout the business, providing guidance to stakeholder groups such as subsidiaries, business units, and assets on environment and water related topics.

- ☒ Implementation of employee awareness campaign or training program on environmental issues

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- ☒ Both Short-Term and Long-Term Incentive Plan, or equivalent

(4.5.1.5) Further details of incentives

The Supervisory Board appoints among its members qualified expert committees that support the decision-making of the Supervisory Board. The Remuneration Committee is authorized to determine the Executive Board's (EB) remuneration, incl. the structure of the remuneration system & the actual target achievement. EB remuneration consists of fixed and variable remuneration elements. Selected employees at senior management level are also eligible to participate in the Long-Term Incentive Plan (LTIP). The variable remuneration - the Long-Term Incentive Plan (LTIP) & the annual bonus, incl. performance criteria rel. to the Company's sustainability & GHG performance. Long-term shareholder & other stakeholder interests are reflected in the performance-related remuneration, which incl. both long-

term and short-term elements. The Remuneration Policy for the EB was approved at the Annual General Meeting in June 2022. It sets out GHG and ESG targets as forming part of the annual bonus and LTIP. The proportion of variable remuneration linked to sustainability-related targets comprises 15% of the annual bonus based on achieving the defined reduction in net absolute Scope 1 & 2 GHG emissions, & 30% of the LTIP based on achieving ESG targets. These ESG targets aim to reduce the net absolute GHG Scope 1 & 2 emissions (weighted with 20%) & improve diversity at the OMV Group (weighted with 10%). The GHG targets in the annual bonus (i.e., reducing Scope 1 & 2 emissions) & the LTIP (i.e., reducing the net absolute GHG Scope 1 & 2 emissions) are clearly linked to & directly derived from the OMV GHG emissions reduction targets for 2030 & the required reduction pathways up to 2030 compared to the base year 2019. The Remuneration Committee defines & approves ESG targets for each LTIP tranche based on an OMV-specific set of criteria derived from the Sustainability Strategy 2030. GHG emissions reduction is a mandatory component of the LTIP. The selected ESG & GHG targets, together with their weighting, are disclosed annually in the Remuneration Report. A health & safety malus mechanism applies to both the annual bonus & LTIP, taking into account performance against predefined criteria such as fatalities, TRIR, & process safety indicators. Depending on performance & the severity of incidents, payouts may be reduced, & in case of severe incidents, reduced to zero. Achievement of targets is subject to external assurance, with results reviewed by the Remuneration Committee and SB

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

Note: The Executive Board comprises of the CEO, CFO and three additional board members that are the Executive Vice Presidents for the Energy, Fuels Feedstock and Chemicals divisions. Short-term Incentive • Annual Bonus: Provides variable remuneration based on annual financial and non-financial performance criteria relevant to OMV's strategy as well as the Oil and Gas and chemical industry. Performance is measured against financial and operational targets as well as ESG criteria, e.g., greenhouse gas (GHG) emissions reduction. Long-Term Incentive • LTIP: Promotes medium- and long-term value creation at OMV. Performance is measured against key criteria linked to OMV's strategy and shareholder returns. The plan also seeks to prevent inappropriate risk-taking and to encourage long-term retention of and ownership by Executive Board members.

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

☒ Corporate executive team

(4.5.1.2) Incentives

Select all that apply

☒ Bonus - % of salary

☒ Shares

(4.5.1.3) Performance metrics

Strategy and financial planning

- ☒ Increased investment in environmental R&D and innovation
- ☒ Increased proportion of revenue from low environmental impact products or services

Emission reduction

- ☒ Implementation of an emissions reduction initiative
- ☒ Reduction in emissions intensity
- ☒ Reduction in absolute emissions

Resource use and efficiency

- ☒ Energy efficiency improvement

Engagement

- ☒ Implementation of employee awareness campaign or training program on environmental issues

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- ☒ Both Short-Term and Long-Term Incentive Plan, or equivalent

(4.5.1.5) Further details of incentives

A Team Goal of "Reduction of Net absolute GHG Scope 1 and 2 emissions" was implemented in the Annual Bonus for all Executives. Furthermore, they can have additional individual target agreements regarding e.g., implementation of projects for GHG or energy intensity reduction, new technologies or products to reduce carbon emission and energy intensity, or the implementation of adequate management systems. The Long-Term Incentive Plan for the Senior Management includes GHG related KPI (Key Performance Indicator) as well. • LTIP with 25% weight: Reduction of OMV Group carbon intensity of energy supply target The focus is on sustainable development as outlined in OMV's Strategy 2030 and reflects implementation of shareholder feedback.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

Short-term Incentive • Annual Bonus: Provides variable remuneration based on annual financial and non-financial performance criteria relevant to OMV's strategy as well as the Oil and Gas and chemical industry. Performance is measured against financial and operational targets as well as ESG criteria, e.g., greenhouse gas (GHG) emissions reduction. Long-Term Incentive • LTIP: Promotes medium- and long-term value creation at OMV. Performance is measured against key criteria linked to OMV's strategy and shareholder returns.

(4.6) Does your organization have an environmental policy that addresses environmental issues?

	Does your organization have any environmental policies?
	Select from: ☒ Yes

[Fixed row]

(4.6.1) Provide details of your environmental policies.

Row 1

(4.6.1.1) Environmental issues covered

Select all that apply

☒ Climate change

(4.6.1.2) Level of coverage

Select from:

☒ Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain

(4.6.1.4) Explain the coverage

The OMV Group recognizes that climate change is one of the most important global challenges today and fully supports the goals set forth by the Paris Agreement. By 2050, OMV aims to transform into a net-zero business. OMV has set out a roadmap with concrete interim short-, medium-, and long-term targets. Additionally, we have a strong internal policy framework that complements OMV Code of Conduct. This framework includes clear roles and responsibilities across the organization, with defined objectives, with which impacts, risks, and opportunities the policies related to, as well as processes for monitoring. In summary, our internal regulations framework for climate change consists of the following components: HSSE, and Human rights policies, GHG management framework, Environmental Management standard, Corporate procurement Directive, Controlling of investments Directive, Enterprise-wide risk management standard. This framework covers own operations and the upstream value chain.

(4.6.1.5) Environmental policy content

Environmental commitments

- ☒ Commitment to a circular economy strategy
- ☒ Commitment to comply with regulations and mandatory standards
- ☒ Commitment to take environmental action beyond regulatory compliance
- ☒ Commitment to stakeholder engagement and capacity building on environmental issues

Climate-specific commitments

- ☒ Commitment to net-zero emissions
- ☒ Commitment to not invest in fossil-fuel expansion
- ☒ Commitment to zero flaring

Social commitments

- ☒ Adoption of the UN International Labour Organization principles
- ☒ Commitment to promote gender equality and women's empowerment
- ☒ Commitment to respect and protect the customary rights to land, resources, and territory of Indigenous Peoples and Local Communities
- ☒ Commitment to respect internationally recognized human rights
- ☒ Commitment to secure Free, Prior, and Informed Consent (FPIC) of indigenous people and local communities

Additional references/Descriptions

☒ Description of environmental requirements for procurement

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

Select all that apply

☒ Yes, in line with the Paris Agreement

☒ Water

(4.6.1.2) Level of coverage

Select from:

☒ Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

☒ Direct operations

(4.6.1.4) Explain the coverage

For the Water topic, the OMV Code of Conduct is supported by specific internal regulations such as HSSE policies, Human Rights policies, Environmental standards, including the Hazardous Substances Management, and the Enterprise-wide Risk Management standard. These regulations outline clear roles and responsibilities across the organization, define objectives, and address the impacts, risks, and opportunities, along with processes for monitoring.

(4.6.1.5) Environmental policy content

Environmental commitments

- ☒ Commitment to avoidance of negative impacts on threatened and protected species
- ☒ Commitment to comply with regulations and mandatory standards
- ☒ Commitment to take environmental action beyond regulatory compliance

Water-specific commitments

- ☒ Commitment to reduce or phase out hazardous substances
- ☒ Commitment to control/reduce/eliminate water pollution
- ☒ Commitment to reduce water consumption volumes
- ☒ Commitment to reduce water withdrawal volumes

Social commitments

- ☒ Commitment to respect internationally recognized human rights
- ☒ Commitment to secure Free, Prior, and Informed Consent (FPIC) of indigenous people and local communities
- ☒ Other social commitment, please specify :• Adoption of the UN International Labour Organization principles • Commitment to promote gender equality and women's empowerment • Commitment to respect internationally recognized human rights

Additional references/Descriptions

- ☒ Acknowledgement of the human right to water and sanitation

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

☒ Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

☒ UN Global Compact

☒ Climate Action 100+

☒ Zero Routine Flaring by 2030 (ZRF)

☒ Oil and Gas Methane Partnership (OGMP)

Together for Sustainability (TfS)

☒ Oil and Gas Decarbonization Charter (OGDC)

☒ Global Reporting Initiative (GRI) Community Member

☒ International Sustainability & Carbon Certification (ISCC)

☒ Task Force on Climate-related Financial Disclosures (TCFD)

☒ Other, please specify :**Ellen MacArthur Foundation Global Commitment,**

(4.10.3) Describe your organization's role within each framework or initiative

TCFD: OMV became a supporter of the TCFD in August 2019. By publicly declaring support for the TCFD and its recommendations, companies demonstrate that they are taking action to build a more resilient financial system through climate-related disclosure

UN Global Compact: OMV has been a participant in the UN Global Compact since January 2003. We incorporate the Ten Principles of the UN Global Compact into strategies, policies and procedures. OMV annually submits a Communication on Progress that details our work to embed the Ten Principles into OMV's strategies and operations. Our annual Sustainability Report acts as our Communication on Progress.

Climate Action 100: Since 2020, OMV have engaged with Climate Action 100 through filling out their assessment tool on evaluating

corporate progress on climate disclosures and the transition to net zero emissions by 2050 or sooner. *Ellen MacArthur Foundation Engagement*: Since 2018, through its endorsement of the Global Commitment, OMV subsidiary Borealis has committed to significantly increase the use of post-consumer recycled content in its production by 2025. *International Sustainability Carbon Certification (ISCC)*: Providing more products that are certified by ISCC PLUS is crucial for the transition to a more circular economy. OMV's cracker in Burghausen was one of the first 20 worldwide to be ISCC PLUS certified for the production of renewable benzene, butadiene, and isobutylene. Additionally, the production of ethylene and propylene at OMV's Burghausen and Schwechat refineries is also ISCC PLUS certified. *Oil and Gas Decarbonization Charter (OGDC)*: OMV is a OGDC signatory since its launch at COP28 and contributes to the global industry effort to speed up climate action and achieving high-scale impact across the oil and gas sector. *Oil and Gas Methane Partnership (OGMP)*: OMV joined in April 2024 and submitted its first annual OGMP report and achieved Gold Standard Pathway status for the 2025 reporting year, showcasing OMV's strong commitment to methane management. *Zero Routine Flaring by 2030 initiative*: OMV has endorsed the Initiative in January 2017. With this OMV committed to: 1. phase out existing routine flaring as soon as possible, but no later than 2030; 2. develop new oil fields only based on development plans that incorporate sustainable utilization or conservation of the field's associated gas and to the following annual reporting to World Bank; 3. report the upstream annual routine / non-routine flaring amounts to the World Bank; 4. report, if all new oil fields have development plans that incorporate sustainable utilization or conservation of the field's associated gas without routine flaring. Together for Sustainability (TfS)fS: Since 2021, OMV has been a member of TfS). As a joint initiative and global network of 40 companies, TfS sets the de facto global standard for the environmental, social, and governance performance of chemical supply chains. The TfS program is based on the principles of the UN Global Compact and Responsible Care. Being a TfS member helps OMV further embed sustainability into its day-to-day business operations and further cascade sustainability requirements within our supply chain.

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Yes

☒ Yes, we engaged directly with policy makers

☒ Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

☒ Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

- ☒ Paris Agreement
- ☒ Sustainable Development Goal 6 on Clean Water and Sanitation

(4.11.4) Attach commitment or position statement

Review-of-OMVs-Public-Policy-Industry-Association-Memberships-Update-2026.pdf

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

- ☒ Yes, my organization is registered

(4.11.6) Types of transparency register your organization is registered on

Select all that apply

- ☒ Mandatory government register

(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization

*Both entities of OMV Group are registered in the EU Transparency Register: OMV Aktiengesellschaft: ID - 94274031992-65 OMV Petrom SA: ID - 716614047943-23
Also: Deutscher Bundestag OMV Deutschland GmbH: ID: R003382 Also: Österreichisches Lobbying- und Interessenvertretungsregister OMV Aktiengesellschaft: ID: LIVR-00056*

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

OMV's public policy engagement is fully committed to the OMV Strategy 2030, which is based on the Paris Agreement and aims to reach a net-zero target in all three scopes by 2050 at the latest. This alignment ensures that OMV's public policy engagement is fully consistent with the targets of the Paris Agreement. OMV's transition strategy includes a strong focus on natural gas as transition fuel and is therefore also part of OMV's climate policy engagement. We recognize that the regulatory framework can help achieve progress on issues such as resource efficiency, climate change, safety improvements, and fair trade. Interactions with governments and regulators take place at international, European, national, and local levels. Regulators, political stakeholders, and non-governmental organizations (NGOs) can all

shape the regulatory framework that affects OMV's business. Therefore, OMV needs to understand the policy, regulatory and NGO environment and ensure that it can contribute its knowledge and insight to discussions regarding the future of the regulatory framework. OMV is a member of industry associations that support the understanding of issues, share knowledge, help develop standards, and provide input to regulatory authorities on behalf of the sector. OMV's activities in its associations make an important contribution to the broader debate on a sustainable, affordable, and secure energy future, as well as sustainable chemicals. Both the energy transition and the transformation from a linear to a circular economy can only succeed if all stakeholders, including legislators, businesses, and society, engage in productive debates. As a voice from the world of business, associations participate in precisely these important debates and contribute their proven expertise on various aspects of policy. More details can be found in our "Review of OMV's Public Policy Engagement & Industry Associations: Alignment with the Paris Agreement" [Review-of-OMVs-Public-Policy-Industry-Association-Memberships-Update-2026.pdf](#)

☒ Yes, we have evaluated, and it is aligned

(4.11.1.12) Global environmental treaties or policy goals aligned with your organization's engagement on this policy, law or regulation

Select all that apply

☒ Paris Agreement

Row 9

(4.11.1.1) Specify the policy, law, or regulation on which your organization is engaging with policy makers

EU Water Framework Directive

(4.11.1.2) Environmental issues the policy, law, or regulation relates to

Select all that apply

☒ Water

(4.11.1.3) Focus area of policy, law, or regulation that may impact the environment

Transparency and due diligence

☒ Transparency requirements

☒ Due diligence requirements

(4.11.1.4) Geographic coverage of policy, law, or regulation

Select from:

☒ Regional

(4.11.1.5) Country/area/region the policy, law, or regulation applies to

Select all that apply

☒ Europe

(4.11.1.6) Your organization's position on the policy, law, or regulation

Select from:

☒ Support with no exceptions

(4.11.1.8) Type of direct engagement with policy makers on this policy, law, or regulation

Select all that apply

☒ Other, please specify :Engagement through participation in industry associations, public consultations and stakeholder events.

(4.11.1.9) Funding figure your organization provided to policy makers in the reporting year relevant to this policy, law, or regulation (currency)

0

(4.11.1.10) Explain the relevance of this policy, law, or regulation to the achievement of your environmental commitments and/or transition plan, how this has informed your engagement, and how you measure the success of your engagement

These legislative packages are highly relevant to the OMV Group and support the implementation of its corporate strategy through the activities of its Expert Groups.

(4.11.1.11) Indicate if you have evaluated whether your organization's engagement on this policy, law, or regulation is aligned with global environmental treaties or policy goals

Select from:

☒ Yes, we have evaluated, and it is aligned

(4.11.1.12) Global environmental treaties or policy goals aligned with your organization's engagement on this policy, law or regulation

Select all that apply

☒ Kunming-Montreal Global Biodiversity Framework

☒ Sustainable Development Goal 6 on Clean Water and Sanitation

[Add row]

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via a trade association

(4.11.2.4) Trade association

Europe

☒ Other trade association in Europe, please specify :Vereinigung der Österreichischen Industrie (IV) / Federation of Austrian Industries

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Details of IV's position on the Paris Agreement: The Federation of Austrian Industries (IV) supports the commitment made by the EU within the framework of the Paris Agreement to achieve an overall emission reduction of minus 55 percent by the year 2030 compared to 1990. Find more information on IV's position here: https://www.iv.at/fileadmin/user_upload/www-iv-at/files/Dokumente/Internationale-Beziehungen/IV-Positionspapier-Fairer-Wettbewerb.pdf Details of IV's position on topics related to OMV's key transition levers: When it comes to the future of Austria's energy and location policy, IV demands an appropriate regulatory framework in order to unlock the country's energy potential through hydropower, geothermal energy, natural gas, climate-neutral hydrogen and carbon capture and storage. Find more information on IV's position here: <https://www.iv.at/news/detail/iv-news-industrie-fordert-energiepolitik-muss-standortpolitik-werden/>

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

0

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Select from:

- ☒ Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- ☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Details of FIC's position on EU climate targets: The Foreign Investors Council (FIC) is a Romania-based association. It considers it necessary for the authorities to fully support the decarbonization of the economy by all means, including co-financing. Effective and transparent planning as well as an enabling legislative framework are recommended by FIC in this regard, including on how to achieve the various mandatory EU objectives, on how to prepare and adapt the country to the new implementation technologies (CCUS, Biomethane, batteries/flexibility assets, hydrogen etc.) that would foster innovation and knowledge sharing and enable the most cost-effective solutions to be found in all economic sectors, but also in the public sector. Find more information on FIC's position here: <https://fic.ro/documents/a-long-term-vision-for-a-prosperous-country> Details of FIC's position on topics related to OMV's key transition levers: FIC also underlines that Romania's energy transition is closely tied to EU regulations, which necessitates a focus on sustainable energy production and efficiency. Find more information on FIC's position here: <https://fic.ro/documents/romania-energy-sector-analysis-with-a-focus-on-gas-and-power>

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Details of BusinessEurope's position on the Paris Agreement: BusinessEurope applauds the landmark Paris Agreement, as it provides the single most important signal that global efforts are the only option to limit average temperature increases. The association stands behind the EU ambition of net-zero greenhouse gas emissions (climate neutrality) to reach the objectives of the Paris Agreement. Find more information on BusinessEurope's position here: https://www.businesseurope.eu/wp-content/uploads/2025/02/final_brochure_energy_and_climate_strategy_april_2019_v4-282-1.pdf Details of BusinessEurope's position on topics related to OMV's key transition levers: The topic of Circular Economy is highly important to BusinessEurope, as can be seen in BusinessEurope's priorities for 2024-2029 on EU Circular Economy Policy. According to the association, improved resource efficiency at an EU level is critical for preventing biodiversity loss and water stress, along with achieving climate neutrality and a toxic free environment by 2050. BusinessEurope emphasizes that the EU's circular economy and net-zero ambitions should go hand in hand. Find more information about BusinessEurope's position here: https://www.businesseurope.eu/wp-content/uploads/2025/02/2024-07-10_businesseurope_2024-2029_priorities_for_eu_circular_economy-1c8-1.pdf

Details of BVEG's position on the EU climate targets: The BVEG supports the targets of the European Green Deal aiming at achieving climate neutrality by 2050. It holds the view that a combination of several technologies in the field of carbon management is necessary in order to reach the EU's climate targets. Find more information about BVEG's position here (<https://www.bveg.de/die-branche/beitrag-zum-klimaschutz/gemeinsame-pressemitteilung-zum-global-methane-pledge/>) and here (<https://www.bveg.de/der-verband/positionen-stellungnahmen/eu-veroeffentlicht-industrial-carbon-management-strategy/>). Details of BVEG's position on topics related to OMV's key transition levers: The BVEG supports – in cooperation with other associations active in this field – the use of deep geothermal energy. The association stresses that geothermal energy is not only considered an inexhaustible source of energy, but it also has the decisive advantage of providing environmentally friendly, weather-independent energy. The energetic use of geothermal energy in Germany can make a valuable contribution to climate protection. Find more information about BVEG's position here (<https://www.bveg.de/der-verband/organisation/der-bveg/>) and here (<https://www.bveg.de/die-branche/tiefe-geothermie-in-deutschland/tiefe-geothermie/>).

Details of CMA's position on the EU climate targets: The Carbon Management Alliance (<https://www.cm-allianz.de/allianz/>) (CMA) was founded in November 2024 by companies from the cement, lime and energy industries as well as the transport and waste sectors. The alliance aims to establish carbon management technologies across industries in Germany and to actively help shape the necessary framework conditions for this. The CMA stresses that carbon management technologies (<https://www.cm-allianz.de/carbon-management/#c61>) offer, in the medium term, a compromise between meeting climate targets and securing industrial production and competitiveness, especially in sectors that are difficult to decarbonize. The CMA stresses that existing efforts to reduce emissions would not be sufficient to achieve the German and European climate targets and that carbon management is an indispensable key technology in this regard. Find more information about CMA's position here: <https://www.cm-allianz.de/> Details of CMA's position on topics related to OMV's key transition levers: The CMA considers that CO₂ storage is a safe and effective measure in the fight against climate change. In its press release (https://www.cm-allianz.de/fileadmin/Download/Pressemitteilung/PM_CMA-Gruendung.pdf) on the occasion of its founding, it highlighted the importance of CO₂ storage for the achievement of climate neutrality. Find more information about CMA's position here: <https://www.cm-allianz.de/carbon-management/#c61>

Details of Cefic's position on the Paris Agreement: Cefic is the forum of large, medium and small chemical companies across Europe. members support the Paris Climate Agreement and a strong action on climate change in line with the scientific advice provided by the Intergovernmental Panel on Climate Change (IPCC). Cefic also supports the European Green Deal and Europe's ambition to become climate neutral by 2050. Find more information about Cefic's position here: <https://cefic.org/about-us/> Details of Cefic's position on topics related to OMV's key transition levers: The European ambition to transition from a linear economy towards a sustainable circular economy calls for an array of complementary innovative recycling solutions and business models. Chemical recycling enables the production of chemicals including plastics from End-of-Life plastic waste streams currently being incinerated, landfilled or exported. Cefic calls for the acceptance of

chemical recycling as an integral solution in the definitions and functioning of a circular economy for plastics. Moreover, it stresses the need for the development of an enabling policy framework which supports and duly integrates chemical recycling. Finally, Cefic advocates for the enabling of investments into the scale-up and further advancement of chemical recycling. Find more information about Cefic’s position here: <https://cefic.org/app/uploads/2024/05/Cefic-position-paper-on-Chemical-Recycling.pdf>

Details of VCI's position with regards to EU climate targets: According to Wolfgang Große Entrup, Managing Director of the German Chemicals Industry Associations, the association wants climate-neutral Europe with a strong industry. This would only be possible with a lot of competitive green electricity, smart incentives, and a legally secure framework. In 2019, the German Chemicals Industry Association (VCI) published a study (<https://www.vci.de/vci/downloads-vci/publikation/2019-10-09-studie-roadmap-chemie-2050-treibhausgasneutralitaet.pdf>) showing how the German chemical industry can technologically achieve greenhouse gas neutrality by 2050. Find more information about VCI's position here: <https://www.vci.de/presse/pressemitteilungen/klimaziele-erreichbar-machen.jsp> Details of VCI's position on topics related to OMV's key transition levers: VCI acknowledges the importance of chemical recycling and the need for a solid regulatory framework in order to stimulate further investment. Find more information about VCI's position here: <https://www.vci.de/ergaenzende-downloads/vci-ped-position-chemisches-recycling-als-baustein-einer-zirkulaeren-wirtschaft.pdf>

Details of FuelsEurope's position on the Paris Agreement: FuelsEurope represents the industry manufacturing and supplying liquid fuels and other products. FuelsEurope stands behind the Paris Agreement and embraces the net-zero GHG objective. The association believes that significant policy improvements are needed to unlock investments and technologies to meet the 2050 target and is ready to cooperate with the EU to impact-assess the relevant regulations. Find more

information about FuelsEurope's position here:

https://www.fuelseurope.eu/uploads/files/modules/campaigns/brochure/1728918368_DEF_FE_2024_ManifestoDigital.pdf Details of FuelsEurope's position on topics related to OMV's key transition levers: Concawe, which is the scientific branch of FuelsEurope, published a study on technologies and fuels to support climate ambitions towards 2050 which includes a detailed bottom-up analysis of sustainable aviation fuel production pathway capacities. Find the study here: https://www.concawe.eu/wp-content/uploads/Rpt_23-5.pdf

☒ No, we did not attempt to influence their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Details of Plastics Europe's position on the Paris Agreement: Plastics Europe supports the EU's ambition to become climate-neutral by 2050, contributing to the global climate objectives of the Paris Agreement. Within its responsibilities and competencies, the association will work towards this common ambition, which it argues will require new technologies and an enabling policy framework. Plastics Europe's members will collaborate with all relevant stakeholders to find and implement adequate solutions aimed at helping the EU reach this objective. Find more information about Plastics Europe's position here: <https://plasticseurope.org/sustainability/climate/> Details of Plastics Europe's position on topics related to OMV's key transition levers: Plastics Europe's vision is to create a sustainable plastics system that continues to meet consumer and societal demands, supports the transitions of many downstream industries, and remains a strategic asset for the European economy. Plastics Europe argues that in order to realize this vision, the European plastics system needs to shift from a linear fossil-fuel based feedstock model to one based on circularity (<https://plasticseurope.org/knowledge-hub/the-circular-economy-for-plastics-a-european-analysis-2024/>): the circular plastics economy. Chemical recycling complements other plastic recycling options like mechanical, dissolution and organic recycling. Since it can deal with complex plastic waste streams, like films or laminates, chemical recycling can be used for plastic waste which would otherwise result in incineration or landfill. Find more on Plastic Europe's position on chemical recycling here: <https://plasticseurope.org/sustainability/circularity/recycling/chemical-recycling/>

Details of IOGP's position on the Paris Agreement: The International Association of Oil & Gas Producers (IOGP) aims to enhance understanding of the critical role the oil and gas industry plays in the energy transition to a low carbon energy future. IOGP Europe represents the interest of its members by engaging with European policymakers setting the necessary conditions to enable oil & gas industry to play an optimal role in contributing to the achievement of the EU energy transition (<https://iogpeurope.org/about-iogp-europe/vision-mission/>). The International Association of Oil & Gas Producers supports the EU's objective to reach climate neutrality by 2050. The European oil and gas industry is committed to reducing its own emissions to play its part in the transition towards a climate neutral EU. Find more information about IOGP's position here: <https://iogpeurope.org/key-topics/climate-neutrality/> Details of IOGP's position on topics related to OMV's key transition levers: In 2024, IOGP released its recommendations on the acceleration of the deployment of geothermal energy in Europe, together with the European Geothermal Energy Council (EGEC). In its recommendations, IOGP calls upon the EU to consider a variety of measures in order to accelerate the deployment of geothermal energy projects. Find more information about IOGP's position here: <https://iogpeurope.org/resource/joint-egec-iogp-europe-recommendations-accelerating-the-deployment-of-geothermal-in-europe/>

Details of ARPEE’s position on the Paris Agreement: As a result of its collaboration and discussions with OMV Petrom, ARPEE reinforced its position in 2024 by explicitly committing to the Paris Agreement. One of the targets of the Romanian Association for the Promotion of Energy Efficiency (ARPEE) is to promote the best measures and technologies that are energy efficient and aligned with the objectives related to climate change, such as those stipulated in the Paris Agreement. Find more information about ARPEE’s position here: <https://arpee.org.ro/en/asociatia-arpee/> Details of ARPEE’s position on topics related to OMV’s key transition levers: Although ARPEE has not explicitly mentioned topics related to OMV’s lighthouse projects in its publicly available statements, the association did support an event on the topic of circular economy in the past. Find more information about the event here: <https://arpee.org.ro/en/categorie/evenimente/>

Details of Hydrogen Europe's position on the EU climate targets: Hydrogen Europe considers it to be imperative to set targets for clean hydrogen to ensure essential investments are channeled towards hydrogen applications in time to meet 2030 climate targets. The association also argues that, with the Green Deal, the European Union has produced tools that can shape a climate-friendly future. Moreover, it states in its Hydrogen Europe Manifesto (https://hydrogeneurope.eu/wp-content/uploads/2024/02/HydrogenEurope_Manifesto_EUelections.pdf) that electricity and hydrogen are both urgent and vital prerequisites for the achievement of climate goals, for the retention of Europe's industrial base and competitiveness, and for European energy security. Find more information about Hydrogen Europe's position here: <https://hydrogeneurope.eu/policy-priorities/> Details of Hydrogen Europe's position on topics related to OMV's key transition levers: According to the association, sustainable aviation fuels are considered to have the most potential to offer emissions reductions in the short term – while alternative propulsion technologies and zero emission aircrafts (like hydrogen propulsion) are not yet matured enough for commercial operations. Find more information about Hydrogen Europe's position here:

https://hydrogeneurope.eu/events/?he_event=XLOQVeRkIKPkN9o#:~:text=Renewable%20hydrogen%20as%20synthetic%20aviation,55%20Package%20in%20July%202021.

Details of FPE's position on the Paris agreement or EU climate targets: The Employers' Federation for Energy (<https://www.fppg.ro/about-fppg/?lang=en>) (FPE) is the framework for the development, dialogue and efficient management of resources in the energy, oil, gas and energy mining sectors in Romania. There is no public statement with regards to its commitment to the Paris Agreement. However, the association has launched an initiative called "Viitorul Energiei" focusing on several pillars which include decarbonization technologies, such as biofuels, CCS or geothermal energy that are crucial for the achievement of climate targets. In its statement on biofuels, the association emphasizes that they are an emerging technology that is important for achieving Romania's and global climate goals by decarbonizing the transport sector. Find more information about FPE's position here: <https://www.fppg.ro/about-fppg/?lang=en> Details of FPE's position on topics related to OMV's key transition levers: It's initiative "Viitorul Energiei" FPPG aims at contributing to Romania's climate neutrality goals through a just transition with sufficient, affordable and clean energy. One of the initiative's pillars is geothermal energy (<https://viitorulenergiei.ro/en/energia-geotermala/>). The initiative stresses that the exploitation of the Earth's core temperature can make a significant contribution to meeting climate neutrality targets and to supplying domestic and industrial beneficiaries with competitively priced energy. Find more information about FPE's position here: <https://viitorulenergiei.ro/en/energia-geotermala/>

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Details of Energy Traders Europe's position on the Paris Agreement: Energy Traders Europe does not directly comment on the Paris Agreement as they are more focused on the functioning of the market. Energy Traders Europe holds the view that competitive, continent-wide energy markets help Europe's energy customers for the following reasons: They create more choice and greater competition; they improve security of supply; and they make it easier and cheaper to decarbonize. Energy Traders Europe's mission is to make Europe's energy markets work even more effectively. The association stresses that it does so by, among other things, applying its experience from the liberalization of gas and power and carbon markets to the development of new markets – particularly for green gases, hydrogen and attribute certificates. Find more information about Energy Trader Europe's position here: <https://www.energytraderseurope.org/who-we-are> Details of Energy Trader Europe's position on topics related to OMV's key transition levers: Energy Traders Europe's focus areas do not include OMV's lighthouse projects given the thematic nature of the association.

Details of PRE's position on EU climate targets: According to the Manifesto of Plastics Recyclers Europe (PRE), the introduction of further legislation to scale up plastics recycling capacities and the development of a strong market for secondary raw materials are paramount for the achievement of the EU's ambitious circular and climate targets. Find more information about PRE's position here: https://www.plasticsrecyclers.eu/wp-content/uploads/2023/12/PRE-Policy-Manifesto_final.pdf
Details of PRE's position on topics related to OMV's key transition levers: Safeguarding the EU plastics recycling industry would be integral to the success of the EU's green and digital transitions. Policies shall therefore focus on safeguarding EU circular economy and climate targets by ensuring that the same legislative requirements to which the EU industry is subject to also apply for imported products into the EU single market. In its manifesto, PRE emphasized that accelerating the

transition from a linear to a circular economy in the EU has never been a more pressing issue. Find more information about PRE's position here:
https://www.plasticsrecyclers.eu/wp-content/uploads/2023/12/PRE-Policy-Manifesto_final.pdf

Details of CEFLEX's position on the Paris Agreement or EU climate targets: A circular economy for flexible packaging (CEFLEX) is a project bringing together the entire value chain (<https://ceflex.eu/who-we-are/>) to tackle the complex technical and business barriers to a circular economy. Project stakeholders represent the full flexible packaging value chain. CEFLEX does not directly refer to the Paris Agreement or EU climate targets in its publicly available statements. However, it emphasizes that by making an even stronger contribution to realizing more sustainable production and consumption, it will also help reduce the impacts of climate change and eliminate plastic leakage into the environment. Find more information about CEFLEX's position here: <https://ceflex.eu/putting-recycled-plastics-to-better-use-in-more-products-key-to-unlocking-major-circular-gains/> Details of CEFLEX's position on topics related to OMV's key transition levers: CEFLEX drives collaboration, innovation and implementation of a Circular Economy for Flexible Packaging – equipping its stakeholders, decision-makers and targeted wider industry with the analysis and information required to accelerate progress. A 5-step roadmap to build a circular economy for flexible packaging has been endorsed by CEFLEX

stakeholders, together with a set of actions needed by each part of the value chain to make it happen. Find more information here (<https://ceflex.eu/what-we-do/>) and here (<https://ceflex.eu/>).

RCI's position on the Paris Agreement: According to the Renewable Carbon Initiative (RCI), using fossil resources is the main reason for global warming. This means that a drastic shift away from fossil carbon is a core element of any strategy seriously aiming to reduce climate change to a minimum and stay within the 1.5° goal of the Paris agreement (https://renewable-carbon-initiative.com/wp-content/uploads/2023/07/23-07-05_RCI_Policy-Messages.pdf). The EU has set itself an ambitious net-zero goal by 2050. RCI believes that to achieve true net-zero, material-related emissions need to be urgently addressed. A shift to renewable carbon sources from biomass, direct CO2 utilisation or recycling is the corresponding strategy. Find more information about RCI's position here: https://renewable-carbon-initiative.com/wp-content/uploads/2023/07/23-07-05_RCI_Policy-Messages.pdf RCI's position on topics related to OMV's key transition levers: Renewable carbon circulates between biosphere, atmosphere or technosphere, creating a carbon circular economy ([https://renewable-carbon-initiative.com/#:~:text=THE%20RENEWABLE%20CARBON%20INITIATIVE%20\(RCI\)&text=Renewable%20carbon%20can%20come%20from,creating%20a%20carb on%20circular%20economy.](https://renewable-carbon-initiative.com/#:~:text=THE%20RENEWABLE%20CARBON%20INITIATIVE%20(RCI)&text=Renewable%20carbon%20can%20come%20from,creating%20a%20carb on%20circular%20economy.)), according to the RCI. RCI holds the view that chemical and physical recycling are essential for the realization of the Green Deal and the circular economy. They are core technologies for the green transition. Different chemical and physical recycling processes are needed to keep the carbon embedded in plastics, other materials, and chemicals in the cycle to achieve the required volumes of the circular economy. Find more on RCI's position here: <https://renewable-carbon.eu/publications/product/rci-position-paper-on-chemical-and-physical-recycling/>

EGEC's position on the Paris Agreement: For an ambitious and coherent 2030 framework for climate and energy policies, binding targets are needed for energy savings, renewable energy and GHG emission reduction. This is the successful triangle for an 80%-95% GHG emission reduced Europe by 2050 and to be in line with the Paris Climate Agreement, according to EGEC. Find more information about EGEC's position here: <https://www.egec.org/egec-calls-binding-target-energy-efficiency/> EGEC's position on topics related to OMV's key transition levers: The association's objective is to facilitate awareness and expansion of geothermal applications across Europe by shaping policy, improving investment conditions and steering research. EGEC stresses that it is impossible to meet the 2040 climate targets without mass deployment of geothermal which would be unique renewable energy. Find more information about EGEC's position here: <https://www.egec.org/media-publications/egec-calls-for-the-inclusion-of-a-geothermal-strategy-in-the-european-commissions-climate-target-for-2040/>

(4.12.1.9) Comment

OMV's 2025 Sustainability Statement was prepared in accordance with the European Sustainability Reporting Standards (ESRS) in readiness for the reporting obligation under the CSRD (Corporate Sustainability Reporting Directive). Sustainability Statement includes disclosures required by the European Union (EU) Taxonomy Regulation EU 2020/852.. Sustainability Statement 2025 was prepared in line with the requirements of the Austrian Nachhaltigkeits- und Diversitätsverbesserungsgesetz (Sustainability and Diversity Improvement Act; NaDiVeG). The Statement is also guided by the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD), the "Sustainability reporting guidance for the oil and gas industry" developed by Ipieca, API, and IOGP, and the Global Reporting Initiative (GRI) Standards. Reporting on OMV's alignment with the UN Sustainable Development Goals (SDGs) has been informed by the Business Reporting on the SDGs published by the GRI and the UN Global Compact (UNGC). The document also serves as our Communication on Progress for the UNGC.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The IEA NZE scenario (based on WEO 2024) is a normative scenario based on an emissions trajectory consistent with limiting the global temperature rise to 1.5 °C (50% probability), with limited temperature overshoot: Temperature rise peaks below 1.6 °C around 2040, before falling back to below 1.5 °C by 2100. It meets the key energy-related UN Sustainable Development Goals (SDGs): universal access to reliable modern energy services is reached by 2030, and major improvements in air quality are secured. Energy sector CO₂ emissions fall by 15% per year between 2030 and 2050, three-times faster than the drop recorded in 2020 after the onset of the Covid-19 pandemic. In all IEA scenarios, the global economy is assumed to grow by 2.7% per year on average over the period to 2050, and the population will grow from 8 to 9.7 billion in 2050. In IEA NZE, with a decreasing demand comes a sharp decline in the oil price from 82 USD/barrel to 42 USD/barrel in 2030, before reaching USD 25/barrel in 2050. Gas prices decrease from 2.7 USD/MBtu in 2023 to around 2 USD/MBtu in the US during the period from 2030 to 2050. In the EU, prices decrease from 12.1 USD/MBtu to 4.4 USD/MBtu in 2030 and 4.0 USD/MBtu in 2050. Future technology costs are linked to the level of deployment, with especially PV and offshore wind facing a rapid decline to 2030, reaching less than half of the current costs in 2050 at a lever lower than in the APS scenario. Carbon prices are introduced in all regions and cover most sectors: they rise to USD 250/tonne CO₂ in 2050 in advanced economies and USD 200/tonne CO₂ in major economies, with lower price levels.

(5.1.1.11) Rationale for choice of scenario

Being consistent with limiting global temperature rise to 1.5 °C, IEA NZE is highly ambitious and fundamentally challenges how energy is consumed and supplied globally. It is therefore used to inform the market assumptions of one of OMV's key business scenarios, the 'net-zero emissions by 2050' case. The commodity prices of the 'net-zero emissions by 2050' case, which is used for stress testing investments and for analysing the resilience of OMV's existing and future assets. This serves to assess the uncertainty in the energy transition pace and better understand the financial risk to OMV's existing assets.

(5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

☒ Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The WWF Water Risk Filter (WRF) is a screening and prioritization tool for companies and investors to assess and respond to water risks at both the corporate and portfolio level, now and in the future. The WRF includes 32 basin risk indicators, primarily based on freely available external, peer-reviewed datasets. These risk indicators can be grouped into three categories: Physical, regulatory, and reputational risks. The WRF scenarios dataset builds on the current basin risk assessment, incorporating a combination of climate and socio-economic scenarios derived from previous IPCC CMIP5 models. Therefore, it is not aligned with the latest models used in the IPCC's Sixth Assessment Report (AR6). Risk scores for the baseline year 2020 are adjusted with projected changes based on ensemble climate impact projections, which account for climate variables (e.g., temperature, precipitation, wind) and socio-economic variables (e.g., population, GDP, technological developments) and represent the consequences and effects of climate and socio-economic changes on water resources. The WRF scenarios allow users to select from several pathway options: an optimistic scenario (SSP1; RCP2.6/RCP4.5), a current trend scenario (SSP2; RCP4.5/RCP6.0), or a pessimistic scenario (SSP3; RCP6.0/RCP8.5). The optimistic scenario was chosen for OMV's assessment.

(5.1.1.11) Rationale for choice of scenario

The WWF WRF is a free online tool that enables OMV to assess and prioritise locations exposed to water risks, providing the company with a clearer view of where to focus its mitigation efforts. OMV's base case scenario for mid- and long-term planning is informed by the IEA STEPS scenario, which is associated with a temperature increase of 2.4°C by 2100 (based on WEO 2024). Therefore, the most suitable scenario for the water assessment is the "optimistic scenario" that resonates with OMV views till 2030.

☒ Climate change (one of five drivers of nature change)

Regulators, legal and policy regimes

☒ Global regulation

☒ Global targets

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The IEA APS scenario (based on WEO 2024) assumes that governments will meet, in full and on time, all national energy and climate targets, including longer term net zero emissions targets and pledges in Nationally Determined Contributions (NDCs). Since most governments are still very far from having policies announced or in place to deliver in full on their commitments and pledges, this scenario could be regarded as giving them the benefit of the doubt and very considerable progress would have to be made for it to be achieved. Energy sector CO2 emissions peak before 2030, falling by 4% per year in the period from 2030 – 2050. The scenario is associated with a temperature rise of 1.7 C in 2100 (with a 50% probability). In all IEA scenarios, the global economy is assumed to grow by 2.7% per year on average over the period to 2050, and the population will grow from 8 to 9.7 billion in 2050. Stringent policy measures lead to a stronger decline in demand and the oil price falls from 82 USD/barrel in 2023 to 58 USD /barrel in 2050. Gas prices increase from 2.7 USD/MBtu in 2023 to around 3 USD/MBtu in the US during the period from 2030 to 2050. In the EU, prices decrease from 12.1 USD/MBtu to 6.0 USD/MBtu in 2030 and 5.2 USD/MBtu between 2040 - 2050. Net zero emissions pledges lead to higher CO2 prices across all regions, with prices rising by 2050 to USD 200/tonne CO2 on average in advanced economies, and to USD 160/tonne CO2 in China, India and Indonesia. Future technology costs are linked to the level of deployment, with especially PV and offshore wind facing a rapid decline to 2030, reaching less than half of the current costs in 2050.

(5.1.1.11) Rationale for choice of scenario

Being consistent with the goal of the Paris Agreement, the APS scenario entails fundamental changes to the current energy market. In addition to the NZE case, it is therefore used to inform the market assumptions of the OMV APS case, which serves to analyse the resilience of OMV's strategy and business model.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

OMV applies an IPCC RCP 8.5 pathway for a physical climate change vulnerability risk assessment. RCP 8.5 refers to a carbon concentration resulting at 8.5 watts per square meter on average across the planet. It is associated with a temperature increase of about 4.3°C by 2100, considered as very unlikely, but not impossible. It is thus used as a worst-case climate change scenario. It is based on the assumptions that no significant new climate policies are implemented and that fossil fuels continue to dominate the global energy mix. It is a scenario characterised by severe physical climate impacts, such as extreme weather events which become more frequent and severe.

(5.1.1.11) Rationale for choice of scenario

This scenario was chosen as a worst-case climate scenario for OMV's physical climate change vulnerability risk assessment, focused on OMV's midterm to long term operations. Based on their material impact on OMV's business performance, specifically factors like, amongst others, sea level rise, heat stress or increase in drought length are considered as part of that assessment.

- ☒ Global regulation
- ☒ Global targets

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The One Earth Climate Model (OECM) was commissioned by the UN-convened Net-Zero Asset Owner Alliance and the European Climate Foundation. The model was established in 2017 through a research project involving the University of Technology Sydney (UTS), the German Aerospace Centre and the University of Melbourne in 2017. The task was to “develop science-based sectoral decarbonization pathways and targets, broken down into scopes 1, 2, and 3, for industry sectors classified under the Global Industry Categorisation Standard (GICS)”. The UTS OECM is an integrated energy assessment model which provides net-zero pathways,

based on science, for all major industries. The 1.5 °C emissions pathways developed by UTS were published in 2022, together with datasets. They are no- or low-overshoot scenarios (Shared Socioeconomic Pathway 1, SSP1), as defined by the Intergovernmental Panel on Climate Change (IPCC). The OECM remains within an energy-related carbon budget of 400 GtCO₂. In 2021, the IPCC identified the global carbon budget required to achieve 1.5 °C between 2020 and 2050 with 67% likelihood as 400 GtCO₂, or with 50% likelihood as 500 GtCO₂. This scenario assumes that new fossil fuel projects will not go ahead and that fossil fuel use will reduce significantly. Negative emissions are taken into account, but only natural carbon sinks. BECCS and CCUS are both excluded. Electricity will account for around 65% of total energy consumption by 2050 and 100% of electricity and total energy supply will be from renewables by 2050.

(5.1.1.11) Rationale for choice of scenario

OMV is an oil, gas and chemicals company. While the OMV is an oil, gas and chemicals company. While the IEA published guidance for oil and gas for alignment with their NZE scenario, OMV's Chemicals segment is not covered by this guidance. The sectoral pathways developed based on OECM cover the three sectors OMV is active in and provide pathways across all emission scopes. This scenario was thus used to check the alignment of the GHG targets for our operation to 2030 and beyond.

- ☒ Global regulation
- ☒ Global targets

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The IEA STEPS scenario (based on WEO 2024) provides a sense of the prevailing direction of travel for the energy sector based on a detailed reading of the latest policy settings in countries around the world. It accounts for energy, climate and related industrial policies that are in place or that have been announced. The aims of these policies are not automatically assumed to be met; they are incorporated in the scenario only to the extent that they are underpinned by adequate provisions for their implementation. Energy sector CO₂ emissions peak before 2030, falling by 1% per year in the period from 2030 – 2050. The scenario is associated with a

temperature rise of 2.4 C in 2100 (with a 50% probability). In all IEA scenarios, the global economy is assumed to grow by 2.7% per year on average over the period to 2050, and the population will grow from 8 to 9.7 billion in 2050. Oil prices remain stable, but below 2023 levels all the way through to 2050. Gas prices increase from 2.7 USD/MBtu in 2023 to around 4 USD/MBtu in the US during the period from 2030 to 2050. In the EU, prices decrease from 12.1 USD/MBtu to 6.5 USD/MBtu in 2030 and 7.7 USD/MBtu in 2050. STEPS incorporates existing and scheduled carbon pricing initiatives, with market-based initiatives rising continuously and carbon taxes and other non-market mechanisms remaining constant unless scheduled to increase. It sees the EU ETS CO2 price for power generation rise to just under USD 160/tonne CO2 in 2050. Future technology costs are linked to the level of deployment, with especially PV and offshore wind facing a rapid decline to 2030, reaching around half of the current costs in 2050.

(5.1.1.11) Rationale for choice of scenario

This IEA scenario informs the market assumptions used for OMV's base case scenario. The base case is used for mid- and long-term planning and estimates that are used in the measurement of various items in the Group financial statements, including impairment testing of non-financial assets and measuring provisions. For investment decisions, business cases are calculated based on the same price and demand assumptions as those used for the mid-term planning and impairment tests.

- ☒ Organization-wide

(5.1.2.3) Summarize the influence of the scenario analysis on the selected business processes

(1) Target Setting: OMV's strategic decision to become a net zero company across Scope 1 – 3 emissions by 2050, supported by GHG targets for 2030 and 2040, was informed by the IEA's SDS scenario, adjusted to our business environment. OMV's transition planning is based on OMV's business scenarios outlined further below. (2) Risk and opportunities: Scenario analysis offers insights into potential future business opportunities and risks. These relate to, e.g., physical risks for OMV's assets; risks and opportunities for business development arising from a slower or a faster energy transition; and risks and opportunities on current and future businesses arising from policies and regulations. (3) Strategy and financial planning: OMV's strategy development is informed by an underlying market base case, aligned with the IEA STEPS scenario. This base case is used to evaluate strategic options, define our mid-term strategy and planning, as well as for estimates relating to the measurement of various items in the Group financial statements. Business cases of new investments are based on this base case scenario. Additionally, all new investments and once year existing assets undergo a stress test based on a "net zero emissions by 2050" scenario building on the IEA NZE scenario. This stress test serves to assess the risk of stranded assets (refer to Notes 3 of the Annual Report for quantitative results). (4) Resilience: Stress testing existing assets and future investments supports capital allocation decisions and ensures OMV's cash-flow resilience. Additionally, OMV performs a resilience analysis of OMV's business model and strategy considering also future assets based on the "net zero emissions by 2050" scenario and the IEA Announced Pledges Scenario (APS) to evaluate potential impacts of a faster energy transition. (5) Capacity building: To communicate the role of scenarios internally, as well as to create buy-in and collect input for OMV's business scenarios, internal climate change trainings, workshops and discussion forums are organised. Its target audience includes representatives across OMV's business segments as well as Executive Board members.

☒ Risk and opportunities identification, assessment and management

(5.1.2.2) Coverage of analysis

Select from:

☒ Organization-wide

(5.1.2.3) Summarize the influence of the scenario analysis on the selected business processes

Scenario analysis helps clarify future business opportunities and risks, giving the company a clearer view of where to focus its efforts. Using the WWF Water Risk Filter, we identified priority water risk sites locations where strengthened water management and improved water use efficiency will be most critical for long term resilience.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

☒ Yes, we have a climate transition plan which aligns with a 1.5°C world

(5.2.3) Publicly available climate transition plan

Select from:

☒ Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

☒ No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

We do not plan to add an explicit commitment within the next two years in line with our strategic priority to grow gas selectively.

(5.2.10) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

☒ We have a different feedback mechanism in place

(5.2.11) Description of feedback mechanism

OMV presented an update on its Strategy 2030 to the public on 6 October 2025, reiterating OMV's ambition to become a net zero emissions company by 2050. This also included an outline of how the company plans to transition to a sustainable energy, fuels, and chemicals company in line with its climate targets. Related feedback is received by the OMV Investor Relations team through regular interactions and meetings with analysts and institutional investors, which are conducted

largely during roadshows and conferences, often at the Executive Board level. In addition, governance roadshows are organized together with the Chairman of the OMV Supervisory Board focusing on governance and ESG topics. For example, feedback received from institutional investors resulted in the establishment of a Sustainability and Transformation Committee (STC) at the Supervisory Board level in November 2021. The STC meets quarterly and oversees the strategy in terms of sustainability, ESG standards, performance, and processes, including HSSE and climate action. The OMV Supervisory Board generally consists of ten shareholder delegates who are elected by the shareholders in a general meeting, and five employee delegates. In each meeting of the full Supervisory Board, the STC gives a report to the entire plenary. Jointly, the STC and the entire Supervisory Board review and approve OMV's Sustainability Statement every year, which also includes the transition plan.

(5.2.12) Frequency of feedback collection

Select from:

☒ More frequently than annually

(5.2.13) Description of key assumptions and dependencies on which the transition plan relies

OMV's transition plan relies largely on market trends in line with the IEA's STEPS scenario. Achieving this plan relies on portfolio changes, increasing zero-carbon energy sales, adjustments to petro-chemicals and fuels production, improving operational efficiency, increasing renewable energy purchases, and CCS beyond 2030. Overall, OMV intends to allocate 30% of its organic CAPEX in the period 2026-2030 to sustainable projects to achieve its decarbonization targets.

(5.2.14) Description of progress against transition plan disclosed in current or previous reporting period

Progress on the transition plan is being reported in more detail as part of the Combined Annual Report. For example, in 2025 Scope 1 and 2 emissions were reduced by 26% vs. 2019, while absolute Scope 3 emissions were reduced by 19% vs. 2019.

(5.2.15) Attach any relevant documents which detail your climate transition plan (optional)

OMV 2025_ Combined Report.pdf

(5.2.16) Other environmental issues that your climate transition plan considers

Select all that apply

☒ No other environmental issue considered

(5.2.18) Adaptation-specific objectives included within your climate transition plan

Select from:

☒ No

[Fixed row]

(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?

(5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning

Select from:

- ☒ Yes, both strategy and financial planning

(5.3.2) Business areas where environmental risks and/or opportunities have affected your strategy

Select all that apply

- ☒ Transition risks
☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Environmental risks and opportunities are central to OMV's strategy, as they directly inform strategic decision-making, including portfolio shifts, investment priorities, and the development of sustainable solutions. Key elements of the strategy include advancing renewables selectively, capturing opportunities in sustainable mobility, and driving circular innovation. In line with this, one of OMV's key priorities is to offer low-carbon products to the markets, such as sustainable (recycled and renewable) fuels and chemicals feedstock, green gas sales, photovoltaic electricity and geothermal energy, as well as by developing high-performance charging points. Additionally, OMV's investments in Carbon Capture and Storage (CCS) will contribute to decarbonization efforts after 2030. These initiatives are at the core of OMV's commitment to supporting and accelerating the energy transition and becoming a net-zero business by 2050. To achieve this ambition, OMV has set mid- and long-term targets to reduce our absolute Scope 3 emissions by at least 20% by 2030 and by at least 50% by 2040, both compared to the baseline year 2019. In addition, OMV intends to reduce the carbon intensity of its energy supply by at least 10% by 2030 and by at least 25% by 2040.

Upstream/downstream value chain

(5.3.1.1) Effect type

Select all that apply

- ☒ Transition risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Climate-related risks – such as political or regulatory uncertainty and disruptions to extraction and transport due to extreme weather events in countries of feedstock origin – may threaten the availability of refinery feedstock supply. A key business opportunity as part of our strategy which also helps mitigate the risk of supply restrictions lies in OMV's initiatives to support a circular economy and move from value chain to value cycle. One example of such an initiative relates to the development and operation of facilities for chemical recycling, such as ReOil. Furthermore, OMV is continuously increasing the share of renewables in its energy purchases.

Investment in R&D

(5.3.1.1) Effect type

Select all that apply

- ☒ Transition risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

The scale-up of zero-carbon product sales is central to reducing the carbon footprint of our energy supply, with research and development supporting this by focusing on new energy solutions. For example, OMV's Fuels business has a dedicated team of interdisciplinary experts who develop climate-friendly solutions through various projects, with particular emphasis on markets and customer segments in hard-to-abate sectors, such as heavy road transport and aviation. The successful implementation of these projects will reduce emissions, deliver innovative green products and services for society, and provide a key differentiator for OMV. Additionally, OMV's Innovation and Technology department coordinates cross-divisional innovation projects across the Energy, Fuels and Chemicals business segments to maximize OMV's innovation portfolio in line with its Strategy 2030. This approach supports the development of technologies that directly contribute to OMV's sustainability targets, as well as the research of breakthrough and high-impact technologies that support OMV's strategy implementation. OMV pursues such innovation both in-house and through collaborations with a variety of partners from academia, research institutes and industry.

Operations

(5.3.1.1) Effect type

Select all that apply

- ☒ Transition risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

OMV is committed to reducing the GHG emissions of its operations (Scopes 1 and 2) through initiatives such as improving energy efficiency, using renewable electricity, modernizing our equipment and processes, and reducing the venting and flaring of gas. These efforts help mitigate business risks related to carbon pricing and capturing opportunities associated with cleaner, more efficient operation. They are central to achieving OMV's climate targets to reduce Scope 1 and 2 emissions by 30% by 2030 and 60% by 2040, as well as to our ambition to be carbon neutral in our operations by 2050.

[Add row]

(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

Row 1

(5.3.2.1) Financial planning elements that have been affected

(5.3.2.2) Effect type

Select all that apply

- ☒ Transition risks
- ☒ Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- ☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

The consideration of climate-related risks and opportunities is integral to the development of OMV's business objectives and is systematically considered in financial planning processes, including mid-term planning and long-term strategic assessments. OMV addresses these factors through financial assumptions in line with business scenarios, including the applied carbon costs, and investment appraisal criteria. The most substantive climate-related changes in the oil and gas industry are expected to occur over a longer time scale, particularly regarding revenues. Accordingly, OMV's management pays close attention to long-term climate-related risks and opportunities. This is also reflected in OMV's Strategy 2030: Key cornerstones include the selective advancement of renewables, capturing opportunities in sustainable mobility and driving circular innovation. In line with this, OMV invests in, for example: 1) expanding sustainable fuels production (e.g., co-processing, SAF, e-fuels, electrolyzers); 2) increasing sustainable chemicals output (through building or acquiring facilities for chemical recycling, such as ReOil; 3) developing a sizable low-carbon business (investing in PV, geothermal, and CCS); or 4) adhering to climate regulations, e.g., emerging zero flaring regulations that may increase capital expenditure for new facilities related to zero flaring implementation projects. In support of these types of investments, 30% of the average organic CAPEX of approximately EUR 2.8 bn between 2026 and 2030 will be allocated to sustainable projects.

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

The goal of OMV's Capital Allocation Framework is to promote and facilitate investments in projects aligned with our climate targets, including our long-term net-zero ambition, rather than traditional fossil fuel-related investments. OMV has introduced a "sustainability CAPEX", which covers investments that meet at least one of two criteria: (1) alignment with the EU taxonomy or (2) support to the implementation of OMV's 2030 Sustainability Framework. The latter includes investments in methane leakage detection and repair, energy efficiency programs, chemical recycling, and community investments, among others. For sustainability projects to pass the final investment decision, different financial hurdles apply compared to other projects in the portfolio. These projects are assessed using distinct weighted average cost of capital (WACC) rates that reflect the specific risks associated with sustainability projects, and they are allowed a payback period of less than 15 years, which is longer than for other projects. In general, all new projects are evaluated regarding their impact on OMV's climate target. To inform investment decisions, a stress test based on a net-zero scenario is performed in addition to a base case assessment. Moreover, inorganic growth projects should comply with OMV's overall pathway to net zero by 2050 and should support low-carbon growth. The potential impact of mergers and acquisitions on OMV's climate targets is also reviewed as part of the due diligence process.

(5.4.2.24) Calculation methodology and supporting information

Details on the calculation methodology can be found in OMV's Sustainability Statement 2025 https://reports.omv.com/en/annual-report/2025/_assets/downloads/entire-omv-ar25.pdf

(5.4.2.25) Substantial contribution criteria met

Select from:

☒ Yes

(5.4.2.26) Details of substantial contribution criteria analysis

With the activity electric charging points are established, which is an infrastructure dedicated to the operation of vehicles with zero tailpipe CO2 emissions. The infrastructure is not dedicated to the transport or storage of fossil fuels.

(5.4.2.27) Do no significant harm requirements met

Select from:

☒ Yes

(5.4.2.28) Details of do no significant harm analysis

OMV Group comply with all relevant DNSH requirements for this activity. All evidence for the DNSH analysis have been verified by the Group's auditors, and includes EIAs, a detailed physical risk and vulnerability assessment for each activity and any additional evidence needed.

(5.4.2.29) Minimum safeguards compliance requirements met

Select from:

☒ Yes

(5.4.2.30) Attach any supporting evidence

(5.4.2.26) Details of substantial contribution criteria analysis

1. The activity researches, develops or provides innovation for technologies, products or other solutions that are dedicated to one or more economic activities for which the technical screening criteria have been set out in this Annex. 2. The results of the research, development and innovation enable one or more of those economic activities to meet the respective criteria for substantial contribution to climate change mitigation, while respecting the relevant criteria for doing no significant harm to other environmental objectives. 3. The economic activity aims at bringing to market a solution that is not yet in the market and is expected to have a better performance in terms of life-cycle GHG emissions than best commercially available technologies based on public or market information. The implementation of the technologies, products or other solutions being researched results in overall net GHG emissions reductions over their life cycle. 8. Where the researched, developed or innovated technology, product or other solution is at TRL 8 or higher, life-cycle GHG emissions are calculated using Recommendation 2013/179/EU or, alternatively, using ISO 14067:2018 or ISO 14064-1:2018 and are verified by an independent third party.

OMV 2025_ Combined Report.pdf

[Fixed row]

(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?

(5.5.1) Investment in low-carbon R&D

Select from:

☒ Yes

(5.5.2) Comment

The definition of low-carbon products or services as well as R&D have been taken from the EU Taxonomy guidelines. Only EU-Taxonomy relevant R&D activities are reported here.

[Fixed row]

(5.5.7) Provide details of your organization's investments in low-carbon R&D for your sector activities over the last three years.

Row 1

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Chemical Recycling: ReOil (Conversion of Plastic Waste to oil)

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Pilot demonstration

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

ReOil® is OMV's proprietary chemical recycling technology - a solvent-based, refinery-integrated, non-catalytic, thermal pyrolysis - which uses post-consumer mixed plastics waste as feedstock and turns those into a pyrolysis oil, a circular feedstock, that can be further processed to polymers of a virgin quality. The ReOil 100 is a pilot plant with a capacity of 100 kg/h that is located at the Refinery Schwechat. The plant is ISCC Plus certified, which ensures that the circular content is verifiably tracked and traced throughout the supply chain. The plant has been operational since 2018. In March 2025 OMV announced the successful start-up of its ReOil plant with a capacity of up to 16,000 metric tons p.a. This plant is also located and fully integrated in the Schwechat refinery – the plant is also ISCC Plus certified, guaranteeing not only that recycled materials can be traced throughout the supply chain but also meet high environmental and social standards. The next step is to develop ReOil into a commercially viable industrial-scale recycling plant.

Row 2

(5.5.7.1) Technology area

Select from:

☒ Hydrogen

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Full/commercial-scale demonstration

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

UpHy (10MW electrolyzer facility) The new 10 MW electrolyzer facility has a production capacity of up to 1,500 tons of green hydrogen annually. It was successfully completed in partnership with Kommunalkredit at the end of 2024. As one of the first green hydrogen production plants in Europe, it has been certified as Renewable Fuels of Non-Biological Origin (RFNBO) under the EU Renewable Energy Directive (RED) legislation.

Row 3

(5.5.7.1) Technology area

Select from:

☒ Hydrogen

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Large scale commercial deployment

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

OMV has taken the Final Investment Decision (FID) for its flagship green hydrogen project in Bruck an der Leitha, Lower Austria. The 140 MW electrolysis plant has secured funding through the European and Austrian Hydrogen Bank auctions and is currently under construction. Once completed, it will be one of the largest green hydrogen production facilities in Europe. With an annual production capacity of up to 23,000 tons of green hydrogen, the new plant will be one of the largest of its kind in Europe. OMV expects to reduce CO₂ emissions by approximately 150,000 tons per year. By using green hydrogen in the future, we are making the processes and production of fuels and chemical products more sustainable and are future-proofing our industry. Our planned 140 MW electrolysis plant in Bruck an der Leitha will meet a significant share of the hydrogen demand at the OMV Schwechat refinery, reinforcing our role as a pioneer in industrial transformation. With an expected start-up at the end of 2027, the new facility will produce green hydrogen using renewable energy from wind, solar, and hydro power.

Row 4

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Recycling

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Basic academic/theoretical research

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

Cooperation with Christian Doppler Labor (TU Wien, MU Leoben) which creates research- based knowledge for the effective utilization of difficult-to-recycle secondary raw materials from various waste streams, development of algorithms to determine the mass contribution of chemical recycling feedstock using sensor fusion, determination of kinetics of plastic pyrolysis components and coke forming mechanisms; kinetic modeling and simulation.

Row 5

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Oil and Gas / alternative liquid fuels

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Basic academic/theoretical research

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

The PhD thesis deals with the influence of feed quality and the resulting products and their quality. Individual polymers are examined with regard to the compounds formed during pyrolysis, their quantification, structural analysis, and subsequently how these can be removed from the Syncrude.

Row 6

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Oil and Gas / alternative liquid fuels

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Applied research and development

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

OMV is partner of the Refolution consortium. Refolution is a Horizon Europe project aiming at the development of next generation biofuels production technologies in aviation and marine sectors, and their implementation in existing refineries. The REFOLUTION consortium is composed of 14 partners from 8 countries, with a preminent expertise in the key EU sectors related to energy and transportation. Driven by a strong industrial-academic leadership, it includes important market players along the entire value chain, research centres universities and a consultancy. More information: <https://www.refolution.eu/>

Row 7

(5.5.7.1) Technology area

Select from:

☒ Hydrogen

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Applied research and development

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

COMET builds bridges between science and business for a sustainable future. It is the Austrian flagship programme of business and science for the promotion of cutting-edge research. It promotes the establishment of competence centres for excellent technologies - the COMET centres. HyCentA "Hydrogen Research Centre Austria" is a COMET centre of the 6th call for COMET centres (K1) and runs in the current period from 2023 - 2026. A total of around 40 leading national and international scientific partners and companies are researching hydrogen technologies together with HyCentA in the COMET programme. More information: <https://www.hycenta.at/en/comet-centre>

Row 8

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Oil and Gas /alternative liquid fuels

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Applied research and development

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

ACIB is a COMET K2 competence center that connects industry and academia to develop sustainable industrial biotechnology solutions. With more than 30 years of experience and a global network of over 180 partners, ACIB supports the development and optimization of biobased production processes. OMV and ACIB collaborate on alternative pathways for chemical production from renewable resources using synthetic biology. The partnership focuses on translating scientific innovation into scalable industrial processes and improving the efficiency, robustness, and economic viability of sustainable chemical manufacturing.

Row 9

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Oil and Gas / alternative liquid fuels

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Applied research and development

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

Wood K Plus (Kompetenzzentrum Holz GmbH) is Austria's leading competence center for wood chemistry, renewable resources, and biobased materials. It operates as a COMET (Competence Centers for Excellent Technologies) Center, a research funding program of the Austrian government that promotes long-term collaboration between industry and science while reducing the risk of multi-year innovation projects through public co-funding. OMV joined the Wood K Plus COMET program as an industrial partner in 2024 and collaborates closely with Wood K Plus within several projects. The partnership focuses on the pretreatment, fractionation, and enzymatic conversion of lignocellulosic biomass and agricultural residues to produce fermentable sugars and platform chemicals, combining OMV's biorefinery ambitions with Wood K Plus' expertise in biomass processing and renewable resources.

Row 10

(5.5.7.1) Technology area

Select from:

☒ Other, please specify :Oil and Gas / Carbon capture, utilization, and storage (CCUS)

(5.5.7.2) Stage of development in the reporting year

Select from:

☒ Applied research and development

(5.5.7.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

Today, classical chemical solvent-based carbon capture concepts are known to include energy-intensive solvent regeneration processes, which are often powered by fossil-based energy sources. To achieve a significant step towards energy and emission reduction, OMV rethinks these approaches and works towards the development of a completely new technology: CoolSwingCC®. CoolSwingCC® is not about inventing carbon capture from scratch - it focuses on making the most energy intensive part of the solvent based capture process more efficient, sustainable, and compatible. The intention is to replace the high temperature regeneration process by implementing a novel electrified (low temperature) technology suitable for being powered by renewable energies. As a modular solution, CoolSwingCC® is not only designed to set new standards for future carbon capture applications but also enables the retrofit of existing carbon capture systems.

[Add row]

(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

-4

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

-5

(5.9.3) Water-related OPEX (+/- % change)

-31

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

0

(5.9.5) Please explain

Water-related CAPEX and OPEX change is negative, especially CAPEX reduced in 2025 compared to 2024 due to projects with higher CAPEX in the previous reporting period.

[Fixed row]

(5.10) Does your organization use an internal price on environmental externalities?

	Use of internal pricing for this environmental externality	Primary reason for not pricing this environmental externality	Explain why your organization does not price this environmental externality
Carbon	Select from: ☒ Yes		
Water	Select from: ☒ No, and we do not plan to in the next two years	Select from: ☒ Not an immediate strategic priority	Not an immediate strategic priority
Other	Select from: ☒ No, and we do not plan to in the next two years		

[Fixed row]

(5.10.1) Provide details of your organization's internal price on carbon.

Row 1

(5.10.1.1) Type of pricing scheme

272

Internal

Select from:

- ☒ Shadow price

(5.10.1.2) Objectives for implementing internal price

Select all that apply

- ☒ Drive low-carbon investment
- ☒ Incentivize consideration of climate-related issues in risk assessment
- ☒ Navigate regulations
- ☒ Stress test investments

(5.10.1.3) Factors considered when determining the price

Select all that apply

- ☒ Alignment with the price of allowances under an Emissions Trading Scheme
- ☒ Scenario analysis

(5.10.1.4) Calculation methodology and assumptions made in determining the price

The prices are chosen in line with the IEA NZE assumptions of the preceding World Energy Outlook (2024).

(5.10.1.5) Scopes covered

Select all that apply

- ☒ Scope 1

(5.10.1.6) Pricing approach used – spatial variance

Select from:

- ☒ Differentiated

(5.10.1.7) Indicate how and why the price is differentiated

To reflect different climate change ambitions, regulations and economic developments, the price is differentiated based on four country groups: (1) EUA/Advanced economies with net zero pledges, (2) Emerging and developing economies with net zero pledges, (3) Selected emerging and developing economies, and (4) other emerging and developing economies.

(5.10.1.8) Pricing approach used – temporal variance

Select from:

☒ Evolutionary

(5.10.1.9) Indicate how you expect the price to change over time

For comparison with our shadow price, in our base case calculations an EUA price of 74 EUR/EUA is assumed for emissions covered by the EU ETS in 2026, increasing to 143 EUR/EUA by 2050. In our 'net zero emissions by 2050' stress case, prices rise from 78 EUR/t in 2026 to 227 EUR/t in 2050 for emissions covered by the EU ETS as well as emissions in advanced economies with net zero pledges. Emerging and developing economies with net zero pledges face a price increase from 31 to 182 EUR/t, selected emerging and developing economies from 7 to 163 EUR/t and other emerging and developing countries from 4 to 50 EUR/t from 2026 to 2050. All prices are real prices in EUR 2025.

(5.10.1.10) Minimum actual price used (currency per metric ton CO2e)

4

(5.10.1.11) Maximum actual price used (currency per metric ton CO2e)

227

(5.10.1.12) Business decision-making processes the internal price is applied to

Select all that apply

☒ Capital expenditure

☒ Risk management

(5.10.1.13) Internal price is mandatory within business decision-making processes

Select from:

☒ Yes, for some decision-making processes, please specify :CO2prices in line with our 'net zero emissions by 2050' stress case are mandatory for all investment decisions in order to calculate sensitivities to assess the uncertainty in the energy transition pace and better understand the financial risk to OMV

(5.10.1.14) % total emissions in the reporting year in selected scopes this internal price covers

85

(5.10.1.15) Pricing approach is monitored and evaluated to achieve objectives

Select from:

☒ Yes

(5.10.1.16) Details of how the pricing approach is monitored and evaluated to achieve your objectives

The main purpose of our internal carbon price is to stress test investments in line with our 'net zero emissions by 2050' case, which itself is aligned with IEA's NZE scenario. The price assumptions are reviewed and adjusted annually in line with the calculation methodology described in the fourth column of this table.

[Add row]

(5.11) Do you engage with your value chain on environmental issues?

	Engaging with this stakeholder on environmental issues	Environmental issues covered
Suppliers	Select from: ☒ Yes	Select all that apply ☒ Climate change
Customers	Select from: ☒ Yes	Select all that apply ☒ Climate change
Investors and shareholders	Select from: ☒ Yes	Select all that apply ☒ Climate change
Other value chain stakeholders	Select from: ☒ Yes	Select all that apply ☒ Climate change

[Fixed row]

(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?

Climate change

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

☒ Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

☒ Contribution to supplier-related Scope 3 emissions

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

☒ 1-25%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

Suppliers with more than 25.000 t CO₂eq

(5.11.1.5) % Tier 1 suppliers meeting the threshold for substantive dependencies and/or impacts on the environment

Select from:

☒ Less than 1%

(5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

[Fixed row]

(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?

Climate change

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

☒ Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

☒ In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to climate change

☒ Procurement spend

(5.11.2.4) Please explain

For this area, we engage with suppliers that cover 80% of our annual Procurement spend. We focus on spend as this is where we see highest potential to reach higher savings in terms of CO2 emissions. In general, the suppliers that cover 80% of Procurement spend are medium and big size companies which have the maturity to calculate the emissions allocated to the goods and services delivered to OMV.

[Fixed row]

(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?

Climate change

(5.11.5.1) Suppliers have to meet specific environmental requirements related to this environmental issue as part of the purchasing process

Select from:

☒ Yes, environmental requirements related to this environmental issue are included in our supplier contracts

(5.11.5.2) Policy in place for addressing supplier non-compliance

Select from:

- ☒ Yes, we have a policy in place for addressing non-compliance

(5.11.5.3) Comment

Details can be found in our Sustainability Statement 2025 here: OMV Combined Annual Report 2025.pdf https://reports.omv.com/en/annual-report/2025/_assets/downloads/entire-omv-ar25.pdf

[Fixed row]

(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization's purchasing process, and the compliance measures in place.

Climate change

(5.11.6.1) Environmental requirement

Select from:

- ☒ Adoption of the UN International Labour Organization Principles

(5.11.6.2) Mechanisms for monitoring compliance with this environmental requirement

Select all that apply

- ☒ Grievance mechanism/ Whistleblowing hotline
☒ Off-site third-party audit
☒ Supplier scorecard or rating
☒ Supplier self-assessment

(5.11.6.3) % tier 1 suppliers by procurement spend required to comply with this environmental requirement

Select from:

- ☒ 100%

(5.11.6.4) % tier 1 suppliers by procurement spend in compliance with this environmental requirement

Select from:

☒ 76-99%

(5.11.6.7) % tier 1 supplier-related scope 3 emissions attributable to the suppliers required to comply with this environmental requirement

Select from:

☒ 100%

(5.11.6.8) % tier 1 supplier-related scope 3 emissions attributable to the suppliers in compliance with this environmental requirement

Select from:

☒ 26-50%

(5.11.6.9) Response to supplier non-compliance with this environmental requirement

Select from:

☒ Retain and engage

(5.11.6.10) % of non-compliant suppliers engaged

Select from:

☒ All suppliers compliant during the reporting period

(5.11.6.11) Procedures to engage non-compliant suppliers

Select all that apply

☒ Providing information on appropriate actions that can be taken to address non-compliance

(5.11.6.12) Comment

Climate change

(5.11.6.1) Environmental requirement

Select from:

- ☒ Disclosure of GHG emissions to your organization (Scope 1 and 2)

(5.11.6.2) Mechanisms for monitoring compliance with this environmental requirement

Select all that apply

- ☒ Off-site third-party audit
- ☒ On-site third-party audit
- ☒ Supplier scorecard or rating
- ☒ Supplier self-assessment

(5.11.6.3) % tier 1 suppliers by procurement spend required to comply with this environmental requirement

Select from:

- ☒ 76-99%

(5.11.6.4) % tier 1 suppliers by procurement spend in compliance with this environmental requirement

Select from:

- ☒ 26-50%

(5.11.6.7) % tier 1 supplier-related scope 3 emissions attributable to the suppliers required to comply with this environmental requirement

Select from:

[Add row]

(5.11.7) Provide further details of your organization's supplier engagement on environmental issues.

Climate change

(5.11.7.2) Action driven by supplier engagement

Select from:

☒ Circular economy

(5.11.7.3) Type and details of engagement

Innovation and collaboration

- ☒ Collaborate with suppliers on innovations to reduce environmental impacts in products and services

(5.11.7.4) Upstream value chain coverage

Select all that apply

- ☒ Tier 1 suppliers

(5.11.7.5) % of tier 1 suppliers by procurement spend covered by engagement

Select from:

- ☒ Less than 1%

(5.11.7.6) % of tier 1 supplier-related scope 3 emissions covered by engagement

Select from:

- ☒ 1-25%

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

In line with OMV's Sustainable Procurement targets to work on reaching low-carbon procurement and with OMV's Procurement Supplier Innovation Framework, two supplier innovation projects have been started in 2025, with the main objective to reduce the CO2 emissions by implementing circular procurement principles. 1. The Rockwool Industrial Insulation Project aimed to enhance sustainability by replacing the disposal of industrial insulation waste with recycling, enabling its use as a raw material for new insulation products for OMV and contributing to a reduction in Scope 3 emissions. 2. By converting used cooking oil from the OMV HQ canteen and its catering provider into biofuel, OMV has established a practical closed-loop circular economy solution that transforms waste into a valuable resource while contributing to decarbonization efforts within Scope 3.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

- ☒ Yes, please specify the environmental requirement : • Reduction of customers' operational emissions (customer scope 1 & 2) • Reduction of own operational emissions (own scope 1 & 2) • Reduction of downstream value chain emissions (own scope 3)

(5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action

Select from:

☒ Yes

[Add row]

(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.

Climate change

(5.11.9.1) Type of stakeholder

Select from:

☒ Customers

(5.11.9.2) Type and details of engagement

Innovation and collaboration

☒ Run a campaign to encourage innovation to reduce environmental impacts

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 100%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

☒ 1-25%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

OMV Gas Engineering (OGE) provides (technical) information on Best Use of NatGas, Legal Compliance and Energy Efficiency for all Gas Customers with main focus "Austria". As OMV Gas is a major player in the Austrian gas market, we provide our offers to some hundred (300-400) company sites here in Austria. Our rationale for engaging with 100% of our gas customers: OMV aims to market its products in a responsible manner by engaging consumers in lowering their greenhouse gas emissions. As a Technical Office within OMV Gas Sales, we are trained and experienced to offer technical support for NatGas with a strong understanding of the substantial opportunities that still exist for energy savings. We offer (in Austria): tailor made training for our gas customers support on "Energy Efficiency Projects" (based on data analysis and best practice) Remark: the legal obligation to save 0,6% of end energy per year at each customer site for OMV Gas Sales has ended in 2021, but we still focus on this topic as an important precondition to be able to cover as much as possible demand by green gases then.

(5.11.9.6) Effect of engagement and measures of success

Austria: The energy law in Austria is in place until 2021 and enabled OMV Gas to conduct detailed measurements of energy savings at end customer sites up to that year. Energy reductions of up to 50 GWh/year have been achieved, targeted and supported by OMV Gas Engineering. Since 2021 these energy savings can not be quantified. OMV Gas Engineering still offers support in energy savings proactively. Projects are supported incl. calculation of potentials. In Austria OGE offers the detection of methane leakages at customer gas grids. Additional site-based activities were undertaken in 2025, and based on the findings from these efforts, the associated methane emissions could have been effectively mitigated. Even the overall volumes of these methane emissions are small, as the CO2e-factor of methane is 28 (up to 80), we contribute to CO2e-savings.

Climate change

(5.11.9.1) Type of stakeholder

Select from:

☒ Investors and shareholders

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Share information about your products and relevant certification schemes

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 26-50%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

☒ Unknown

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

We engage with investors and shareholders to ensure transparency, build trust, and discuss our environmental strategy in light of their expectations. This also leads to better understanding of their information needs and expectations which should result in improved reporting as well as potentially leading to better financing conditions and a broader investor base.

(5.11.9.6) Effect of engagement and measures of success

Constructive engagement can lead to improved transparency and understanding as well as higher ESG ratings from rating agencies, which can further attract investment and create sustainable long-term value for society. Strong ESG performance can result in lower perceived risk, which may translate into a lower cost of capital
[Add row]

(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?

	Environmental initiatives implemented due to CDP Supply Chain member engagement
	Select from: ☒ Yes

[Fixed row]

(5.13.1) Specify the CDP Supply Chain members that have prompted your implementation of mutually beneficial environmental initiatives and provide information on the initiatives.

Row 1

C6. Environmental performance - Consolidation approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

Climate change

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

OMV uses the operational control approach in reporting its GHG inventory emissions data, in line with the GHG Protocol Corporate Standard and sector-specific guidance.

Water

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

OMV is applying the same consolidation approach across all environmental issues incl. water, and is using the operational control approach.

Biodiversity

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

OMV is applying the same consolidation approach across all environmental issues incl. biodiversity and is using the operational control approach.
[Fixed row]

C7. Environmental performance - Climate change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

☒ No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

	Has there been a structural change?
	Select all that apply ☒ No

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

(7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

Select all that apply

☒ Yes, a change in methodology

☒ Yes, a change in boundary

(7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

Change in methodology: • Energy segment: The methodology for measuring absolute methane emissions was updated in the reporting year to align with the OGMP 2.0 standards. Previous reporting years were not restated due to this change. • Borealis: The historical Scope 3.1 emissions were restated in 2019 and 2024 to reflect an update to an emission factor. Change in boundary: • Scope 3.15 emissions for 2024 were restated to reflect the adjusted OMV ownership share of an investment.
[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

☒ Yes

(7.1.3.2) Scopes recalculated

Select all that apply

☒ Scope 3

(7.1.3.3) Scope 3 categories recalculated

Select all that apply

☒ Purchased goods and services

(7.1.3.4) Base year emissions recalculation policy, including significance threshold

For the purpose of setting GHG emissions reduction targets, a meaningful and consistent comparison over time requires the setting of a performance date (base year) with which to compare current emissions. For its 2030 and 2040 GHG reduction targets, the OMV Group has set 2019 as the base year including full-year Scope 1 to 3 emissions data of Borealis. In accordance with best practice guidance (i.e., GHG Protocol), when a company undergoes significant structural changes due to acquisitions, divestments, and mergers, GHG data shall be recalculated for all years dating back to the base year. OMV has set a threshold that a significant change means that the cumulative effect of mergers/acquisitions/divestments represents a higher effect than 5% on the OMV Group's base year absolute GHG emissions that are covered by targets (Scope 1&2 emissions and the following Scope 3 categories are included: Category 11: Use of Sold Products for OMV's energy

and Nitro segments, Category 1: Purchased Goods (feedstocks) from OMV's non-energy business segment, and Category 12: End-of-Life of Sold Products for OMV's non-energy segment).

(7.1.3.5) Past years' recalculation

Select from:

☒ Yes

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

☒ ISO 14064-1

☒ The Greenhouse Gas Protocol: Scope 2 Guidance

☒ The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard

☒ 2019 Refinement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories

☒ IPIECA's Petroleum Industry Guidelines for reporting GHG emissions, 2nd edition, 2011

☒ The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

☒ American Petroleum Institute Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry, 2009

☒ European Union Emission Trading System (EU ETS): The Monitoring and Reporting Regulation (MRR) – General guidance for installations

☒ Other, please specify :Monitoring guideline 2007/589/EG and the respective national legislation under the EU ETS; EMEP/EEA air pollutant emission inventory guidebook; Excel tool based on IOGP factors; IPIECA and API's Estimating petroleum industry value chain (Scope 3)

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

(7.3.1) Scope 2, location-based

Select from:

☒ We are reporting a Scope 2, location-based figure

(7.3.2) Scope 2, market-based

Select from:

☒ We are reporting a Scope 2, market-based figure

(7.3.3) Comment

According to the Greenhouse Gas Protocol, Scope 2 accounts for GHG emissions from the generation of purchased electricity, consumed by the company, or otherwise brought into the organizational boundary of the company (purchased heat and steam are included). How detailed purchased electricity is broken down differs for all reporting units and is especially depending on their field of operation. Methodology for data identification is known by the local responsible persons. Data are collected and validated at OMV site level and checked for plausibility at corporate level. For Scope 2 calculations purchased electricity, heat and steam is split up to all reporting sites and then multiplied with the corresponding emission factor to convert them to GHG emissions. In accordance with GHG Protocol, OMV uses country specific emission factors (National Grid Factor) for the location-based Scope 2 figures and specific emission factors from electricity, heat and steam providers for the market-based Scope 2 figures, as far as available. Emission factors from energy providers are most accurate as they include the electricity source and technology type each energy provider uses. With the result of Scope 2 emissions for each site, the sum is built for countries and business divisions as well as for the overall OMV Group.

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are excluded from your disclosure of climate-related data?

Select from:

☒ Yes

(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions which are not included in your disclosure.

Row 1

(7.4.1.1) Source of excluded emissions

OMV offices not already included in the GHG inventory

(7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

☒ Scope 2 (location-based)

☒ Scope 2 (market-based)

(7.4.1.4) Relevance of location-based Scope 2 emissions from this source

Select from:

☒ Emissions are not relevant

(7.4.1.5) Relevance of market-based Scope 2 emissions from this source

Select from:

☒ Emissions are not relevant

(7.4.1.8) Estimated percentage of total Scope 1+2 emissions this excluded source represents

0.1

(7.4.1.10) Explain why this source is excluded

Office buildings with small share of OMV employees are excluded as their amount of Scope 1 and 2 emissions are negligible (around 0.01%).

(7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

We have estimated the number of employees in international offices excluded from OMV's scope 2 inventory. With an assumed purchased energy consumption per employee, we are able to estimate the total MWh excluded from inventory. Which is equivalent to around 0.02% of OMV purchased energy consumption and represents an estimated 0.01% of OMV's Scope 1 + 2 Location based emissions.

[Add row]

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

12648004

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 2 (location-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

906219

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019

Scope 2 (market-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

1272153

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

12114065

(7.5.3) Methodological details

In 2025, there was a restatement of 2019 feedstock data in Scope 3.1. The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

536442

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

212529

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

According to IPIECA guidelines for Scope 3 estimation for the oil and gas business, upstream transportation and distribution emissions are not accounted for, as the fuels used in this transportation are oil products which are already accounted for in Scope 3 category 11 "Use of sold products". Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

1142347

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 6: Business travel

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, business travel emissions are not accounted for, as the fuels used in this transportation are oil products which are already accounted for in Scope 3 Cat. 11 "Use of sold products". Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, employee commuting emissions are not accounted for, as the fuels used in this transportation are oil products and are already accounted for in Scope 3 Cat. 11 “Use of sold products”. Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

0

(7.5.3) Methodological details

OMV Group’s leased assets such as offshore platforms and joint ventures are included in Scope 1 emissions. This also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO₂e)

0

(7.5.3) Methodological details

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, down-stream transportation and distribution emissions are not accounted for, as the fuels used in this transportation are oil products and are already accounted for in Scope 3 Cat. 11 “Use of sold products”. Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

12195100

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

96466758

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

11752165

(7.5.3) Methodological details

The OMV Group uses 2019 as its base year for all three scopes of emissions and for its targets because 2019 was the last full year before the COVID-19 pandemic and the majority of the OMV Group's assets were operating for the whole of 2019.

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

Emissions of assets that are owned by OMV Group are included in Scope 1 or 2. Therefore there are no emissions in this category.

Scope 3 category 14: Franchises

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

OMV Group does not maintain any franchise activities.

Scope 3 category 15: Investments

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

In 2019 Scope 3 category 15 emissions were not accounted in OMV Group. As of 2024, Scope 3 emissions from investments have been reported at OMV Group level.

Scope 3: Other (upstream)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

No other relevant Upstream emissions.

Scope 3: Other (downstream)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

(7.5.3) Methodological details

No other relevant Downstream emissions.

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO₂e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO₂e)

9470995

(7.6.3) Methodological details

All of the Health, Safety, Security, and Environment (HSSE) data, including greenhouse gas (GHG) data for Scope 1, Scope 2, and Scope 3 GHG emissions, is collected for activities where OMV is the operator or where OMV has a stake of more than 50% and exerts a controlling influence (operational control approach). OMV uses emission factors from different sources, e.g., IPCC, API GHG Compendium, etc. Since 2024, OMV has been applying global warming potentials of the IPCC Sixth Assessment Report (AR6 – 100 years).

[Fixed row]

(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO₂e?

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO₂e)

730629

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO₂e)

815098

(7.7.4) Methodological details

Scope 2 emissions are reported separately applying the location-based and the market-based approach. Aggregated Scope 2 GHG emissions are calculated in t CO2e based on activity data (MWh of electricity consumption) multiplied by GHG emission factors from various sources (e.g. national authorities, supplier-specific emission factors used, etc.). The market-based method reflects emissions from electricity that companies have purposefully chosen. It derives emission factors from contractual instruments. Where no contractual data is available, residual mix or location-based emission factors is used.

[Fixed row]

(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

13389241

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Average data method

☒ Hybrid method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0.03

(7.8.6) Please explain

The aggregated Scope 3.1 emissions from purchased goods and services are derived from purchased feedstock, goods, and services with a combination of an average data method for purchased feedstock, and a hybrid method (average emission factors and supplier-specific factors if available) for purchased goods and

services. The primary sources of emission factors are DBEIS, Ecoinvent®, and other sources. OMV actively engages with suppliers to increase the proportion of emissions calculated using supplier-specific emission factors.

Capital goods

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

572588

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Hybrid method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0.01

(7.8.6) Please explain

The aggregated Scope 3.2 emissions from capital goods are derived from the expenditure on capital goods using a hybrid method (average emission factors and supplier-specific factors if available). The primary source of emission factors is DBEIS. OMV actively engages with suppliers to increase the proportion of emissions calculated using supplier-specific emission factors. The Percentage of emissions calculated using data obtained from suppliers is 0.002%, considering the two decimal places restriction in this question, 0.01% was entered instead.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Average data method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.6) Please explain

The aggregated Scope 3.5 emissions are derived from waste data and appropriate emission factors from DEFRA, Ecoinvent©, and other sources.

Business travel

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Reason for this category not being relevant

Select from:

☒ Emissions not relevant to the sector that our organization operates in according to methodology specified in question 7.2

(7.8.6) Please explain

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, business travel emissions are not accounted for, as the fuels used in this transportation are oil products which are already accounted for in Scope 3 Cat. 11 "Use of sold products". Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Employee commuting

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Reason for this category not being relevant

Select from:

☒ Emissions not relevant to the sector that our organization operates in according to methodology specified in question 7.2

(7.8.6) Please explain

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, employee commuting emissions are not accounted for, as the fuels used in this transportation are oil products and are already accounted for in Scope 3 Cat. 11 "Use of sold products". Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Upstream leased assets

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Reason for this category not being relevant

Select from:

☒ Emissions covered under scope 1 or 2

(7.8.6) Please explain

OMV Group's leased assets such as offshore platforms and joint ventures are included in Scope 1 emissions. This also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

Downstream transportation and distribution

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Reason for this category not being relevant

Select from:

☒ Emissions not relevant to the sector that our organization operates in according to methodology specified in question 7.2

(7.8.6) Please explain

According to the IPIECA guidelines for Scope 3 estimation for the oil and gas business, down-stream transportation and distribution emissions are not accounted for, as the fuels used in this transportation are oil products and are already accounted for in Scope 3 Cat. 11 "Use of sold products". Thus, to avoid double counting these are not accounted for in OMV Group. This exclusion also applies to Borealis as part of OMV Group, however this category might be relevant for Borealis as stand-alone company.

☒ No change

(7.10.1.3) Emissions value (percentage)

0

(7.10.1.4) Please explain calculation

not relevant

[Fixed row]

(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Select from:

☒ Market-based

(7.12) Does your organization have significant land sector activities in its operations or value chain?

(7.12.1) Agriculture, forestry or other land sector activities

Select from:

☒ No, explanation provided

(7.12.3) Specify the reason for no significant activities

Select from:

☒ Relevant activities identified but evaluated to be below the significance threshold

(7.12.4) Significance threshold

In 2025, OMV Group's biogenic Scope 1, 2 & 3 emissions were 2 784 982 tCO₂. This corresponds to around 2% of the Group's fossil GHG emissions and is therefore considered not to be significant.

[Fixed row]

(7.13) Does your organization choose to account for and report technological CO₂ removals or captured CO₂ with geologic storage, or have you done so in previous years?

	Technological CO2 removals or captured CO2 with geologic storage in the reporting year	Specify the reason for no technological CO2 removals or captured CO2 with geological storage in the reporting year	Technological CO2 removals or captured CO2 with geologic storage were accounted for and reported in previous years
	<i>Select from:</i> ☒ No, explanation provided	<i>Select from:</i> ☒ No relevant activities identified	<i>Select from:</i> ☒ No

[Fixed row]

(7.15) Does your organization break down its Scope 1 and/or Scope 2 emissions by greenhouse gas type?

(7.15.1) Emissions breakdown by greenhouse gas type

Select from:

☒ Yes, Scope 1 emissions only

[Fixed row]

(7.15.1) Break down your total gross global Scope 1 and Scope 2 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).

Row 1

[Fixed row]

(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.

Consolidated accounting group

(7.22.1) Scope 1 emissions (metric tons CO2e)

9314215

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

729367

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

813954

(7.22.4) Please explain

Scope 1 and 2 GHG emissions from the consolidated accounting group includes 100% of gross Scope 1 and 100% of gross Scope 2 emissions from the parent and subsidiaries, as well as OMV's proportionate share of emissions from joint operations that it operationally controls.

All other entities

(7.22.1) Scope 1 emissions (metric tons CO2e)

156780

(7.22.2) Scope 2, location-based emissions (metric tons CO2e)

1262

(7.22.3) Scope 2, market-based emissions (metric tons CO2e)

1144

(7.22.4) Please explain

Scope 1 and Scope 2 emissions reported under "All other entities" include partners' shares in joint operations where OMV has operational control.

[Fixed row]

(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?

Select from:

☒ Yes

(7.23.1) Break down your gross Scope 1 and Scope 2 emissions by subsidiary.

Row 1

(7.23.1.1) Subsidiary name

Borealis AG

(7.23.1.2) Primary activity

Select from:

☒ Other base chemicals

(7.23.1.3) Select the unique identifier you are able to provide for this subsidiary

Select all that apply

☒ ISIN code – bond

☒ LEI number

☒ Other unique identifier, please specify :VAT registration number (VAT); Commercial court number (CCN); Data processing number (DPN))

(7.23.1.4) ISIN code – bond

AT0000A24UY3

(7.23.1.9) LEI number

549300TAT2TADBW0WR70

(7.23.1.11) Other unique identifier

VAT: ATU62060511; CCN: FN 269858a; DPN: 3001082

(7.23.1.12) Scope 1 emissions (metric tons CO2e)

1533697

(7.23.1.13) Scope 2, location-based emissions (metric tons CO2e)

497602

(7.23.1.14) Scope 2, market-based emissions (metric tons CO2e)

623373

(7.23.1.15) Comment

Primary Activity: Development, manufacture, distribution, marketing and sale of chemical products and plastic materials, directly and indirectly and the granting and acquisition of related licenses. Numbers are reflecting Borealis as integrated part of OMV and might differ from Borealis publication.

Row 2

(7.23.1.1) Subsidiary name

OMV Petrom

(7.23.1.2) Primary activity

Select from:

☒ Oil & gas extraction

(7.23.1.3) Select the unique identifier you are able to provide for this subsidiary

Select all that apply

- ☒ ISIN code - equity
- ☒ Ticker symbol

(7.23.1.13) Scope 2, location-based emissions (metric tons CO2e)

58898

(7.23.1.14) Scope 2, market-based emissions (metric tons CO2e)

52638

(7.23.1.15) Comment

Primary Activity: Exploration, production, refining, distribution, marketing, and sale of crude oil, natural gas, petroleum products, and energy-related services, both directly and indirectly, as well as the acquisition, granting, and management of related licenses, permits, and concessions. Numbers are reflecting OMV Petrom as integrated part of OMV and might differ from OMV Petrom publication.

[Add row]

(7.24) Report your methane emissions as percentages of natural gas and hydrocarbon production or throughput.

Row 1

(7.24.1) Oil and gas business division

Select all that apply

☒ Upstream

(7.24.2) Estimated total methane emitted expressed as % of natural gas production or throughput at given division

0.27

(7.24.3) Estimated total methane emitted expressed as % of total hydrocarbon production or throughput at given division

0.15

(7.24.4) Indicate whether your methane emissions figure is based on observational data

Select from:

☒ Estimated or modelled data only

(7.24.5) Details of methodology

Total methane emissions in toe from all sources in Upstream divided by total natural gas production in toe respectively divided by the total hydrocarbon production in toe. The percentages have increased from the previous year due to a disproportionately high reduction in production vs the respective reduction in methane emissions. The lower reduction in methane emissions is due to the methodology change in the Energy segment explained in question 7.1.2.
[Add row]

(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

☒ Doing so would require we disclose business sensitive/proprietary information

Row 2

(7.27.1) Allocation challenges

Select from:

☒ Diversity of product lines makes accurately accounting for each product/product line cost ineffective

(7.27.2) Please explain what would help you overcome these challenges

It is expected that improving reporting capabilities will help overcoming challenges of accounting complex processes.
[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

(7.28.1) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Select from:

☒ Yes

(7.28.2) Describe how you plan to develop your capabilities

A continuous effort is being made to improve how emissions are identified, measured and reported following the GHG protocol (scope 1, 2 and 3) as well as their allocation to specific customers.

[Fixed row]

(7.29) What percentage of your total operational spend in the reporting year was on energy?

Select from:

☒ More than 10% but less than or equal to 15%

(7.30) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	Select from: ☒ Yes
Consumption of purchased or acquired electricity	Select from: ☒ Yes
Consumption of purchased or acquired heat	Select from: ☒ Yes

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of purchased or acquired steam	Select from: ☒ Yes
Consumption of purchased or acquired cooling	Select from: ☒ No
Generation of electricity, heat, steam, or cooling	Select from: ☒ Yes

[Fixed row]

(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

Consumption of fuel (excluding feedstock)

(7.30.1.1) Heating value

Select from:

☒ LHV (lower heating value)

(7.30.1.2) MWh from renewable sources

66643

(7.30.1.3) MWh from non-renewable sources

43272287

(7.30.1.5) Total (renewable + non-renewable) MWh

(7.30.1.4) MWh from non-renewable zero or near-zero emission sources

270375

(7.30.1.5) Total (renewable + non-renewable) MWh

47841925.00

[Fixed row]

(7.30.6) Select the applications of your organization's consumption of fuel.

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for the generation of electricity	Select from: ☒ Yes
Consumption of fuel for the generation of heat	Select from: ☒ Yes
Consumption of fuel for the generation of steam	Select from: ☒ Yes
Consumption of fuel for the generation of cooling	Select from: ☒ Yes
Consumption of fuel for co-generation or tri-generation	Select from: ☒ Yes

[Fixed row]

(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.

Sustainable biomass

(7.30.7.1) Total fuel MWh consumed by the organization

0

(7.30.7.2) MWh fuel consumed for self-generation of electricity

0

(7.30.7.3) MWh fuel consumed for self-generation of heat

0

(7.30.7.4) MWh fuel consumed for self-generation of steam

0

(7.30.7.5) MWh fuel consumed for self-generation of cooling

0

(7.30.7.6) MWh fuel consumed for self- cogeneration or self-trigeneration

0

(7.30.7.7) Comment

no comment

Other biomass

(7.30.7.1) Total fuel MWh consumed by the organization

0

(7.30.7.2) MWh fuel consumed for self-generation of electricity

0

(7.30.7.3) MWh fuel consumed for self-generation of heat

0

(7.30.7.4) MWh fuel consumed for self-generation of steam

0

(7.30.7.5) MWh fuel consumed for self-generation of cooling

0

(7.30.7.6) MWh fuel consumed for self- cogeneration or self-trigeneration

[Fixed row]

(7.30.15) Provide details on the electricity purchases that were accounted for at a zero or near-zero emission factor in the reporting year.

Row 1

(7.30.15.1) Country/area of electricity consumption

Select from:

☒ Austria

(7.30.15.2) Sourcing method

Select from:

☒ Physical power purchase agreement (physical PPA) with a grid-connected generator

(7.30.15.3) Low-carbon technology type

Select from:

☒ Large hydropower (>25 MW)

(7.30.15.5) Low-carbon electricity consumed via selected sourcing method in the reporting year (MWh)

219000

(7.30.15.6) Energy attribute certificate (EAC) tracking system used

Select from:

☒ GO [Europe]

(7.30.15.7) Country/area of origin (generation) of the low-carbon electricity or energy attribute

Select from:

☒ Austria

(7.30.15.8) Are you able to report the commissioning or re-powering year of the electricity generation facility?

Select from:

☒ Yes

(7.30.15.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2006

(7.30.15.14) Comment

n/a

Row 2

(7.30.15.1) Country/area of electricity consumption

Select from:

☒ Austria

(7.30.15.2) Sourcing method

Select from:

☒ Purchase from an on-site installation owned by a third party (on-site PPA)

(7.30.15.3) Low-carbon technology type

Select from:

☒ Solar

(7.30.15.5) Low-carbon electricity consumed via selected sourcing method in the reporting year (MWh)

3018

(7.30.15.6) Energy attribute certificate (EAC) tracking system used

Select from:

	In-year net production	Comment
Natural gas, billion cubic feet	265.64	No additional comment

[Fixed row]

(7.38.1) Explain which listing requirements or other methodologies you use to report reserves data. If your organization cannot provide data due to legal restrictions on reporting reserves figures in certain countries/areas, please explain this.

OMV uses the SEC standards to estimate 1P reserves. For all other reserves and resource classes, the SPE PRMS is applied. Oil and gas production assets are depreciated using the units of production (UOP) method based on total proved developed reserves or total proved reserves. Reserves are estimated by the Group's own engineers. In addition, external reserves assessments are performed by independent reserves consultants on a two-yearly cycle. Proved reserves are those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulation before the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain. Proved developed reserves are those proved reserves that can be expected to be recovered through existing wells with existing equipment and operating methods, or in which the costs of the required equipment are relatively minor compared with the cost of a new well and through installed extraction equipment and infrastructure operational at the time of the reserves estimate. It should be reasonably certain that the required future expenditure will be made to safeguard existing equipment within the current budget. Proved undeveloped reserves are those proved reserves that are expected to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion or substantial new investment is required in order to safeguard or replace ageing facilities.

(7.38.2) Disclose your estimated total net reserves and resource base (million boe), including the total associated with subsidiaries and equity-accounted entities.

(7.45.7) Direction of change

Select from:

☒ Increased

(7.45.8) Reasons for change

Select all that apply

☒ Change in revenue

(7.45.9) Please explain

• Gross global combined Scope 1 and 2 emissions decreased slightly by 3%. • sales revenues decreased by 7% mainly due to lower sales volumes from contracts with customers in the Gas Marketing & Power business of the Energy segment. •Therefore, the higher decrease in revenues in comparison to the decrease in emissions resulted in an increase of intensity. In 2025, the Sales Revenues of Borealis Group, excluding Borouge investments, were reclassified as "held for sale" and "discontinued operations". Due to this, both the sales revenues and the Scope 1&2 emissions reported in this question are for the OMV Group without Borealis, which results in a different Scope 1&2 than in the rest of this CDP report. The previous year's intensity was recalculated with the same exclusions in order to calculate the percentage change. Revenue is disclosed in EUR
[Add row]

(7.48) Provide the intensity figures for Scope 1 emissions (metric tons CO2e) per unit of hydrocarbon category.

Row 1

(7.48.1) Unit of hydrocarbon category (denominator)

Select from:

Select all that apply

☒ Divestment

☒ Change in output

☒ Energy conservation, recovery and efficiency

☒ Venting reduction, leak detection and gas capture

- ☒ Flaring reduction
- ☒ Change in methodology
- ☒ Equipment improvements

(7.48.6) Please explain

The Scope 1 emission intensity refers to OMV’s Upstream E&P business, measured as total GHG Scope 1 emissions per Thousand Barrels of oil equivalent of oil and gas production from operated assets. The emissions per thousand barrels of oil equivalent of oil and gas production increased by 32% compared with 2024. In the E&P business, both the GHG emissions and production decreased. The Operated oil and gas production (denominator) decreased by 27% in 2025 compared with 2024. The Emissions (numerator) in the E&P business decreased by 3% in 2025 compared with 2024. The lower reduction in Scope 1 emissions compared to the production is partially due to the methodology change in the Energy segment explained in question 7.1.2 and partially due the other reasons for change selected in this question.

(7.53.1.82) Explain target coverage and identify any exclusions

Target coverage: 100% of Scope 1 direct GHG emissions and 100% of Scope 2 (market based) indirect GHG emissions from fully owned assets and assets where the Group's interest is less than 100% but more than 50%, and where the Group's interest is 50% or less if OMV is the operator of a joint venture. Scope 1 and 2 GHG emission reductions by 2030 include own measures and CCU/S; Exclusions: GHG removals (according to ESRS definitions), avoided emissions, and carbon credits are excluded as means of achieving the 2030 GHG emission reduction targets.

(7.53.1.83) Target objective

Sustainability & circularity lie at the center of our Group strategy. We aim to become a net-zero business by 2050, accelerate the energy transition, and proactively expedite the transition from a linear to a circular economy. We clearly recognize that climate change is one of the most important global challenges today and fully support the goals set forth by the Paris Agreement. OMV continuously improves the carbon efficiency of its operations and product portfolio, is fully committed to supporting and accelerating the energy transition, and aims to become a net-zero business by 2050 or sooner. To concretize our 2050 goals, we have set mid- and long-term targets to reduce our absolute Scope 1&2 emissions by at least 30% by 2030 and by at least 60% by 2040, both against the baseline year 2019. OMV has set out a roadmap with concrete interim short-, medium-, and long-term targets. Key pillars: -Decrease production and sales of fossil fuels -An increase in zero-carbon product energy sales -Increase in sales volumes of sustainable (renewable and recycled) chemicals and polymers -Improved energy and operational efficiency, and zero routine flaring and venting, thereby reducing methane emissions -All electricity purchases in the Chemicals segment will be sourced from 100% renewable energy. Investing in Carbon Capture and Storage (CCS) will support our efforts to achieve the climate targets.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

By 2030, OMV aims to reduce its Scope 1 and 2 emissions by 30%. This will be done with portfolio changes, improving energy and operational efficiency, increasing renewable energy purchases, additional petrochemicals production and lower fossil sales, CCS, modernizing our equipment and processes, and reducing the venting and flaring of gas. In particular OMV will conduct energy efficiency programs, run methane leakage, and repair programs, purchase 100% renewable energy in Chemicals, and decrease fossil fuels production and sales. In 2025, OMV reduced its Scope 1 and Scope 2 emissions by -26% vs. 2019. In 2025, we implemented several emission reduction initiatives contributing to achieve this target. For example, in the Schwechat refinery in 2025, a project was implemented to improve the efficiency of a boiler, leading to a reduction of approximately 8,900 t of CO2 per year. Several measures were executed, including replacing an existing air preheater with a segregated heat exchanger system.

(7.53.1.82) Explain target coverage and identify any exclusions

The target is covering the three most relevant Scope 3 categories for OMV: • Energy and F&F Scope 3 indirect GHG emissions from Category 11 (3.11) “Use of sold products” to third parties on an equity production basis. • Chemicals Scope 3 indirect GHG emissions from Category 1 “Purchased goods and services” (3.1) on a 100% operator/majority owned basis • Chemicals (Borealis) Scope 3 indirect GHG emissions from Category 12 “End of life treatment of sold products” to third parties on an equity production basis (3.12) Scope 3 GHG emission reductions by 2030 will include our own measures as well as CCU/S in the value chain. Exclusions: Intracompany sales and purely financial traded volumes, intracompany supply, intracompany sales and purely financial traded volumes; other Scope 3 indirect GHG emissions. GHG removals (according to ESRS definitions), avoided emissions, and carbon credits are excluded as means of achieving the 2030 GHG emission reduction targets.

(7.53.1.83) Target objective

Sustainability & circularity lie at the center of our Group strategy. We aim to become a net-zero business by 2050, accelerate the energy transition, and proactively expedite the transition from a linear to a circular economy. We clearly recognize that climate change is one of the most important global challenges today and fully supports the goals set forth by the Paris Agreement. OMV continuously improves the carbon efficiency of its operations and product portfolio, is fully committed to supporting and accelerating the energy transition, and aims to become a net-zero business by 2050 or sooner. To concretize our 2050 goals, we have set mid- and long-term targets to reduce our absolute Scope 3 emissions by at least 20% by 2030 and by at least 50% by 2040, both against the baseline year 2019. OMV has set out a roadmap with concrete interim short-, medium-, and long-term targets. Key pillars: -Decrease production and sales of fossil fuels -An increase in zero-carbon product energy sales -Increase in sales volumes of sustainable (renewable and recycled) chemicals and polymers. Investing in Carbon Capture and Storage (CCS) in the value chain will support our efforts to achieve the climate targets.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

By 2030, OMV aims to reduce its Scope 3 emissions by at least 20%. As an oil, gas, and chemicals company, we are aware that a large percentage of our emissions come from the use of our products. As such, we have a unique responsibility in this regard, and understand that a “business as usual” approach is no longer an option. The Energy Transition material topic focuses on reducing the carbon footprint of our energy supply, specifically through increasing sales of zero-carbon energy products such as renewable mobility fuels and renewable power. This is the centerpiece of OMV’s commitment to supporting and accelerating the energy transition, and becoming a net-zero business by 2050 or sooner. In this non-energy segment, we will also reduce our Scope 3 emissions by pursuing circular economy technologies, but not at the same rate as our energy segments. In 2025, OMV reduced its Scope 3 emissions by -19% vs. 2019. In 2025, we implemented several emission reduction initiatives contributing to achieve this target. For example, in April 2025, OMV started production of the first green hydrogen at the Schwechat refinery with a new 10 MW PEM electrolyzer, currently the largest such plant in Austria. The facility can produce up to 1,500 t of green hydrogen annually, supporting sustainable fuel production and saving up to 15,000 t of CO2 per year.

Select from:

☒ Revised**(7.53.2.84) Explain the reasons for the revision, replacement, or retirement of the target**

As OMV's portfolio has evolved, some of our project timelines have shifted and the Group has revised its target for the carbon intensity of energy supply from 15–20% to 10% by 2030. For 2040, OMV continues to target a 50% decrease in its carbon intensity of energy supply.

(7.53.2.85) Explain target coverage and identify any exclusions

Target Coverage: •GHG emissions and energy sold from the energy business of OMV Group; •Scope 1 direct GHG emissions from 100% operator/majority-owned assets from Energy and F&F •Scope 2 indirect GHG emissions (market-based) from third-party energy purchases (such as electricity, heat, steam) from 100% operator/majority-owned assets from Energy and F&F •Scope 3 indirect GHG emissions from Category 11 "Use of sold products" to third parties on an equity production basis •Scope 1-3 emission reductions by 2030 will include our own measures as well as CCU/S in the value chain. GHG removals (according to ESRS definitions), avoided emissions, and carbon credits are excluded as means of achieving the 2030 GHG emission reduction targets. Exclusions: •Scope 1 direct GHG emissions of Chemicals, Petchem-related Scope 1 direct GHG emissions in Refining, Energy, and F&F assets not operated/not majority owned by OMV; •Scope 2 indirect GHG emissions (market-based) from third-party energy purchases (such as electricity, heat, steam) of Chemicals, petrochemicals-related Scope 1 direct GHG emissions in Refining, Energy, and F&F assets not operated/majority owned by OMV; •Scope 3 indirect GHG emissions from Category 11 "Use of sold products": intracompany sales and purely financial traded volumes; •other Scope 3 indirect GHG emissions.

(7.53.2.86) Target objective

The objective of the target is to support the goals of the Paris Agreement by reducing the carbon footprint of our energy supply, specifically by increasing sales of zero-carbon energy products such as renewable mobility fuels and renewable power. The Energy Transition material topic focuses on reducing the carbon footprint of our energy supply, specifically through increasing sales of zero-carbon energy products such as renewable mobility fuels and renewable power. This is the centerpiece of OMV's commitment to supporting and accelerating the energy transition, and becoming a net-zero business by 2050 or sooner in alignment with the IEA's Net Zero Emissions (NZE) scenario, which foresees limiting the global temperature rise to 1.5C. To concretize our 2050 goals, we have set mid- and long-term targets to reduce our absolute Scope 1&2 emissions by at least 30% by 2030 and by at least 60% by 2040, and our Scope 3 emissions by at least 20% by 2030 and by at least 50% by 2040, all against the baseline year 2019. In addition, we intend to reduce the carbon intensity of our energy supply by at least 10% by 2030 and by at least 50% by 2040, both against the baseline year 2019.

(7.53.2.87) Plan for achieving target, and progress made to the end of the reporting year

Our plan to achieve the 2030 target by reducing Scope 1&2 emissions is to implement portfolio changes, improve operational efficiency, improving energy efficiency increase renewable energy purchases, decrease of refining fossil throughput and neutralization measures e.g., CCS, modernizing our equipment and processes, and reducing the venting and flaring of gas. More in particular OMV will conduct energy efficiency programs, run methane leakage, and repair programs, decrease fossil fuels production and sales. To achieve this target by reducing Scope 3 emissions, we take climate action in our product and service portfolio. These are the key pillars that will enable us to meet our goals: • Adjustments to petrochemicals and fuels production: A growing share of sustainable (renewable and recycled) feedstock for fuel and chemical production at our integrated sites in Schwechat and Burghausen • An increase in zero-carbon energy sales: There will be a significant increase in sustainable and biobased fuels, green gas sales, and a build-up of photovoltaic electricity capacity for captive use, as well as geothermal heat. In 2025, we implemented several emission reduction initiatives contributing to achieve this target. For example: In February 2025, OMV Petrom started construction of its plant for sustainable aviation fuels (SAF) and renewable diesel (HVO), following the Final Investment Decision in June 2024. From 2028, the plant will supply around 250,000 t of sustainable fuels annually.

Select all that apply

☒ Other, please specify :OMV Group's Sustainability Strategy (inclusive of Borealis)

(7.54.1.19) Explain target coverage and identify any exclusions

OMV Group is increasingly turning to renewable sources of electricity to power our operations. For instance, in our refineries in Schwechat and Burghausen, electricity contracts stipulate that 50% of purchased electricity must be from renewable sources. To achieve the goals described in our Strategy 2030, a key action plan to purchase 100% renewable electricity in Chemicals has also been defined. In addition, our subsidiary, Borealis (included within Chemicals in OMV) also aims to source 100% of its electricity supply from renewable sources by 2030, to reduce indirect (scope 2) emissions that are caused by electricity consumption. To

achieve this 2030 goal, OMV Group will use a combination of onsite investments where possible, as well as long-term contracts known as power purchase agreements. The projects targeted are preferably as close as realistically possible to the OMV Group locations where the power is consumed. Due to the nature of the target, there is no base year designated. The target is to source 100% of electricity from renewable sources by 2030 independent of any base year.

(7.54.1.20) Target objective

OMV is increasingly turning to renewable sources of electricity to power our operations. One approach is purchasing renewable energy, which subsequently reduces our Scope 2 emissions. The 2030 renewable electricity goal is an important part of the OMV Group Strategy 2030 and contributes to the overall Group target of reducing indirect (Scope 2) emissions. In 2025, electricity purchased in Chemicals accounted for 2,750 GWh (2024: 2,731 GWh), approximately 77% (2024: 73%) of OMV's total electricity purchased.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

The Chemicals Segment within OMV Group, will use a combination of on-site investments where possible, as well as long-term contracts known as power purchase agreements (PPAs). The projects targeted are as close as realistically possible to the OMV Group's locations where the power is consumed. OMV will continue to increase the sourcing of renewable electricity to power our operations. To reduce our Scope 2 emissions and achieve Borealis' target of sourcing 100% renewable electricity by 2030, OMV has continued to establish several Power Purchase Agreements (PPAs) for long-term renewable electricity sourcing, securing the necessary electricity and utilities for production processes. Having signed three sizable PPAs in Austria and Germany with counterparties VERBUND, ImWind, and Statkraft, OMV concluded an additional PPA with Energy to secure 9 GWh/a from a PV plant in Lower Austria, with delivery starting at the end of 2026. In September 2025, commercial operations started in the OMV PV Neusiedl asset. On a 80-year-old production site in Neusiedl an der Zaya, a 5.6 MWp PV plant has been built and the production corresponds approximately to the annual consumption of 1,500 households. The project design and execution was very complex due to the difficult terrain and simultaneous operations in the plants. The power will be sold to the refinery by means of an internal PPA. Several similar projects are scheduled to come on stream over the next few years.

☒ Other, please specify :OMV Group Sustainability Strategy**(7.54.2.18) Please explain target coverage and identify any exclusions**

Target coverage: Energy E&P activities comprising all operations from exploration to production, gas processing and gas storage (up to the first point of sale PoS), including LNG liquefaction plants if located before the first point of sale. The PoS is defined as the place/device of transfer of ownership of the product to the downstream player, which may be a third party or a downstream business unit within OMV. It can be described broadly as “from wellhead to point of sale.” 100% methane emissions (as part of Scope 1 direct GHG emissions) and total (gross) marketed gas (sales) from fully owned assets and assets where the Group’s interest is less than 100% but more than 50%, and where the Group’s interest is 50% or less if OMV is the operator of a joint venture. All methane emissions from operated upstream assets marketing oil and/or gas are included, including operated gas storage. Methane emissions from fugitives, venting, and incomplete combustion, for example in flares and turbines, are all included. Following this approach, emissions linked to force majeure events or sabotage are also included. Exclusions: Methane emissions and marketed gas of assets not operated/not majority-owned by OMV. Exploration drilling activities are considered outside of the boundary for inclusion (as this activity can be seen as separate from the value chain for marketed gas and oil), while production drilling and completions are considered within the boundary for inclusion. Energy-operated power plants, Fuels and Chemicals.

(7.54.2.19) Target objective

OMV implements measures aimed at optimizing its operational processes, increasing energy efficiency, reducing flaring, and venting, and reducing methane emissions through leakage detection and improvement of asset integrity. We will continue phasing out routine flaring and venting as soon as possible, but no later than 2030, as part of OMV's commitment to the World Bank's "Zero routine flaring by 2030" initiative. The method for calculating methane intensity is aligned with the Oil and Gas Climate Initiative's (OGCI) approach, defined as: Methane intensity [%] = Methane emissions [Sm3] / Marketed gas (sales) [Sm3].

(7.54.2.19) Target objective

OMV implements measures aimed at optimizing its operational processes, increasing energy efficiency, reducing flaring, and venting, and reducing methane emissions through leakage detection and improvement of asset integrity. We will continue phasing out routine flaring and venting as soon as possible, but no later than 2030, as part of OMV’s commitment to the World Bank’s “Zero routine flaring by 2030” initiative. The method for calculating methane intensity is aligned with the Oil and Gas Climate Initiative’s (OGCI) approach, defined as: Methane intensity [%] = Methane emissions [Sm³] / Marketed gas (sales) [Sm³].

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Reducing methane emissions from routine/non-routine venting of gas during oil and gas production and processing as well as from gas leaks also contributes to slowing down climate change and provides a valuable mitigation option for climate risk management. Fugitive methane emissions and other non-methane volatile organic compounds are monitored or estimated and controlled systematically with leak detection and repair programs. The methodology for measuring absolute methane emissions, which contribute to the methane intensity metric, was updated in the reporting year to align with the OGMP 2.0 standards. For 2019 and 2024, methane emissions were calculated using a different methodology and should not be used for direct comparison with 2025. For reference, if the 2025 methane intensity were calculated using the previous methodology, the value would be 0.2% instead of 0.3%. In 2026, OMV will review the established base year for the 2030 methane intensity target. Leaks are repaired based on prioritization and risk assessments. Key initiatives include the pipeline integrity program and modernizing facilities like compressor stations. OMV implements LDAR programs in both upstream and downstream sectors to address fugitive emissions. LDAR programs in OMV Energy align with the GHG Management Framework, the OGMP 2.0 Framework of the UN program for the reduction of methane emissions, which OMV joined in April 2024, and with the EU MER (Methane Emissions Regulation), which came into force in August 2024 for the sites that are subject matter. An internal and external LDAR team in OMV Austria and OMV Petrom uses advanced technologies for regular site screenings. In August 2025, OMV submitted its first LDAR reports

to the respective appointed competent authorities of the Member States, as along with the annual reports with the source-level quantification of methane emissions using generic emission factors, in order to comply with the EU MER. In addition, OMV submitted its first annual OGMP report and achieved Gold Standard Pathway status for the 2025 reporting year, showcasing the Company's strong commitment to methane management. In 2025, Upstream made further progress with methane emission monitoring and reporting, performing additional source-level methane measurements and quantification in their assets. Based on 2025 data, fugitive methane emissions account for 13% of total OMV Energy methane emissions.

One focus area of regular engagement with our suppliers is reducing carbon emissions. This annual engagement with numerous suppliers supports our 2030 target of maintaining active, climate-related engagement with suppliers representing 80% of Procurement spend, as a foundation for initiating and running joint low-carbon initiatives. The target covers Upstream value chain activities – tier 1 suppliers and covers suppliers within the Procurement scope, according to OMV's Procurement Directive. Hence excluded are all suppliers that are not within the Procurement scope, according to OMV's Procurement Directive. Target 2025: Engage with all suppliers that cover 80% of Procurement spend and assess their carbon footprint as a foundation for initiating and running joint low-carbon initiatives.

(7.54.2.19) Target objective

This KPI has been established to enhance the accuracy and transparency of Scope 3 emissions from purchased goods and services. We have adopted the 80/20 approach, focusing on suppliers that account for 80% of procurement spend to maximize impact.

(7.54.2.21) List the actions which contributed most to achieving this target

In 2025, 100% of suppliers covering >80% of Procurement spend were engaged to assess their carbon footprint and define and run joint low-carbon initiatives. (2024: 100%) This target is reviewed annually. Our Climate Change Questionnaire is our central instrument for creating transparency related to carbon emissions in our supply chain, and it is closely linked to our target. In 2025, OMV invited more than 1,000 suppliers to respond to a simplified version of the Climate Change Questionnaire, which was developed internally based on the CDP structure. In addition to reporting their emissions, we asked suppliers whether they have carbon reduction targets in place and invited them to share with us any initiatives or projects to reduce carbon emissions in which they would like us to participate. Suppliers were selected based on spend so as to focus on our largest business partners and thus maximize impact. The Climate Change Questionnaire is also included in our sourcing events. We award additional points in the commercial evaluation to bidders who have completed/agree to complete the EcoVadis assessment and Climate Change Questionnaire. In addition, individual meetings and webinars were offered to our suppliers to help them better understand the requirements of the Climate Change Questionnaire and why this information is important to OMV. We also include topics related to sustainability and low-carbon procurement in our annual strategic supplier meetings and invite key suppliers to deep dive workshops on innovation. In 2025, 17 meetings were organized with our strategic suppliers, during which commercial, technical, HSSE, and sustainability topics were discussed. In total, 6 deep dive workshops on innovation were also held with key suppliers. We actively engage not only with our suppliers, but also with buyers on sustainable procurement and supplier innovation practices. Our buyers receive regular training on how to assist the Procurement department in achieving its sustainable sourcing goals. To this end, they engage with suppliers and encourage participation in ESG evaluations, such as the EcoVadis assessments or our Climate Change Questionnaire.

Monitored is the Volume of gas routinely flared and vented in Sm3.***(7.54.2.19) Target objective***In OMV's Code of Conduct, we are committed to reducing operational emissions, including by improving operational and energy efficiency as outlined in the Strategy 2030. In our Environmental Management Standard, we have embedded the requirement to phase out routine flaring and venting by 2030. The target supports OMV's strategic objective to decarbonize its operations and to become a net-zero business by 2050.***(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year**

During oil production, associated gas is produced alongside the oil. While much of this gas is utilized, some is flared due to technical or economic constraints, releasing greenhouse gases like CO2 and methane. Around 0.2% of OMV's total direct GHG emissions and around 0.7% of OMV Energy's direct GHG emissions result from routine flaring. In 2017, OMV endorsed the World Bank's "Zero routine flaring by 2030" initiative. Existing sites where the routine flaring of associated and free gas still occurs are required to develop a phase-out plan to eliminate legacy routine flaring as soon as possible, but no later than 2030. New production sites are developed with the appropriate gas utilization solutions in place and without routine flaring. We report to the World Bank on our progress on this initiative annually. OMV defines routine flaring in accordance with the Global Flaring and Methane Reduction Partnership (GFMR) and the World Bank's "Zero Routine Flaring by 2030" initiative. Routine flaring and venting amounts are reported at the E&P country/asset level, including gas storage, and are aggregated at OMV Energy level. In the base year 2019, approximately 80% of the total gas flared and vented across the OMV Group was routinely flared and vented. Through reductions in routine flaring and venting, this share decreased to 12% by 2025.

(7.54.3.10) Explain target coverage and identify any exclusions

By 2050, OMV aims to transform into a net-zero business. The commitment “net-zero business by 2050” covers the greenhouse gas (GHG) emissions of our operations (Scopes 1 and 2), and our product portfolio and other Scope 3 emissions along the value chain. For our interim GHG targets for 2030 and 2040, Scopes 1 and 2 and the following Scope 3 categories are included: Category 11: Use of Sold Products for energy supply, Category 1: Purchased Goods (feedstocks) from OMV’s Chemicals business segment, and Category 12: End-of-Life of Sold Products for non-energy use. For the net zero Scope 1-3 emissions by 2050 target, residual GHG emissions (after GHG emissions are reduced by approximately 90–95%) are intended to be neutralized by methods such as GHG removals and storage in own operations and the upstream value chain (electricity generation), and carbon credits.

(7.54.3.11) Target objective

Climate neutrality by 2050 in line with the Paris Agreement. By 2050, OMV aims to transform into a net-zero business. This commitment includes not only our operations (Scope 1 and 2), but also our product portfolio and other material Scope 3 emissions.

(7.54.3.12) Do you intend to neutralize any residual emissions with permanent carbon removals at the end of the target?

Select from:

☒ Yes

(7.54.3.13) Do you plan to mitigate emissions beyond your value chain?

Select from:

☒ No, and we do not plan to within the next two years

(7.54.3.14) Do you intend to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation?

Select all that apply

☒ Yes, we plan to purchase and cancel carbon credits for neutralization at the end of the target

(7.54.3.15) Planned milestones and/or near-term investments for neutralization at the end of the target

We are aware that the vast majority of our emissions comes from the use of our products. As an oil, gas, and chemicals company, we have a unique responsibility in this regard. To support OMV's ambition of becoming a net-zero business by 2050, OMV has developed a transition plan. This plan is an integral part of the OMV Strategy 2030 and complemented by concrete short-, mid-, and long-term targets. OMV's targets are set at both absolute and intensity levels, with the ultimate goal of achieving net zero greenhouse gas (GHG) emissions in Scopes 1, 2, and 3 by 2050. To achieve our targets, OMV is committed to taking climate action across various areas of operation, including our product and service portfolio, circular economy activities, innovations and R&D efforts, working environment, and social investments. Reaching our targets for 2030 and beyond will demand considerable effort from all our business units, leveraging our existing strengths and expertise. The reduction in greenhouse gases (GHGs) will be achieved through several key initiatives: • Increase in zero-carbon energy sales: significant increase in sustainable and biobased fuels, green gas sales, and build-up of photovoltaic electricity capacity, as well as geothermal energy. • Install around 5,000 high-performance charging points for electric vehicles by 2030 • Building a production portfolio of sustainable fuels and chemical feedstocks, targeting an annual capacity of around 900,000 t by 2030 • Improved energy and operational efficiency, and zero routine flaring and venting, thereby reducing methane emissions. • All electricity purchases in the Chemicals segment will be sourced from 100% renewable energy.

(7.54.3.17) Target status in reporting year

Select from:

☒ Underway

(7.54.3.19) Process for reviewing target

*Our targets and the progress we are making towards achieving them is reviewed on a regular basis incl. as part of the mid-term planning and annual strategy reviews.
[Add row]*

(7.54.4) Indicate which targets reported in 7.53.1/2 incorporate methane emissions, or if you do not have a methane-specific emissions reduction target for your fossil fuel activities, please explain why not and forecast how your methane emissions will change over the next five years.

	Methane emissions reduction targets
	<i>Select from:</i> ☒ Methane emissions included in targets reported in questions 7.53.1 or 7.53.2

[Fixed row]

(7.55) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.

	Emissions reduction initiatives that were active within the reporting year
	<i>Select from:</i> ☒ Yes

[Fixed row]

(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e
Under investigation	8	
To be implemented	30	151000
Implementation commenced	25	95000
Implemented	23	59000
Not to be implemented	8	

[Fixed row]

(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.

Row 1

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in production processes

☒ Process optimization

(7.55.2.2) Estimated annual CO₂e savings (metric tonnes CO₂e)

59000

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

☒ Scope 1

(7.55.2.4) Voluntary/Mandatory

Select from:

☒ Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

0

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

46000000

(7.55.2.7) Payback period

Select from:

☒ 4-10 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 11-15 years

(7.55.2.9) Comment

Includes 23 projects with decarbonization implemented in the Energy segment as well as the three refineries, amounting to a reduction of Scope 1 emissions of ~59 000 tonsCO₂eq, no annual monetary savings available
[Add row]

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

(7.55.3.2) Comment

The Remuneration Policy for the Executive Board was approved at the Annual General Meeting in June 2022. It sets out GHG and ESG targets forming part of the annual bonus and LTIP. The proportion of variable remuneration linked to sustainability-related targets comprises 15% of the annual bonus, based on achieving the defined reduction in net absolute Scope 1 and 2 GHG emissions, and 30% of the Long-Term Incentive Plan (LTIP), based on achieving ESG targets. These ESG targets are to reduce the net carbon intensity of energy supply (weighted with 20%) and improve diversity at the OMV Group (weighted with 10%). The GHG targets in the annual bonus (i.e., reducing Scope 1 and 2 emissions) and the LTIP (i.e., reducing the carbon intensity of energy supply) are clearly linked and directly derived from the OMV GHG emissions reduction targets for 2030 and the required reduction pathways up to 2030 compared to the base year 2019. This means the achievement of the GHG targets set out in the annual bonus and the LTIP requires OMV to implement the defined decarbonization pathway to achieve its 2030 GHG emissions reduction targets, which include the reduction of absolute Scope 1 and 2 emissions by 30%, the reduction of Scope 3 emissions by 20%, and the reduction of the carbon intensity of energy supply by 10% – all compared to the base year 2019.

[Add row]

(7.57) Describe your organization's efforts to reduce methane emissions from your activities.

Sustainability remains a pillar of OMV's Strategy 2030. The Company is committed to achieving zero routine flaring and venting by 2030, as well as to reducing methane emissions to below 0.1% by 2030. Methane emissions reduction is incorporated into OMV absolute target Abs1; Intensity targets Int 1 and methane target Oth2. OMV's Upstream business accounts for ~ 95% of all methane emissions within OMV Group largely attributed to routine flaring and venting as methane sources. Methane emissions represented ~ 37% of the OMV Upstream GHG Scope 1 emissions in 2010, which are in turn part of OMV's Int1. By phasing out routine flaring and venting, OMV Upstream is a main contributor to the achievement of targets Abs1, Int1, and Oth2, hence, the measures taken to achieve the target directly relate to the reduction of methane emissions. In 2017, OMV voluntarily endorsed the World Bank's "Zero routine flaring by 2030" initiative. Existing sites where the routine flaring of associated and free gas still occurs are required to develop a phase-out plan to eliminate legacy routine flaring as soon as possible, but no later than 2030. New production sites are developed with the appropriate gas utilization solutions in place and without routine flaring. We report to the World Bank on our progress on this initiative annually. All OMV operations are also required to minimize methane emissions from point sources, as well as fugitive emissions and technically avoidable emissions (such as those from well testing and well workover, among other events). In 2024, OMV joined the Oil and Gas Methane Partnership (OGMP 2.0) of the United Nations Environment Program (UNEP). It is the only comprehensive and most credible reporting framework for the oil and gas industry that improves the accuracy and transparency of methane emissions reporting. Key initiatives include the pipeline integrity program and modernizing facilities like compressor stations. LDAR programs in OMV Energy align with the GHG Management Framework, the OGMP 2.0 Framework of the UN program for the reduction of methane emissions, which OMV joined in April 2024, and with the EU MER (Methane Emissions Regulation), which came into force in August 2024 for the sites that are subject matter. An internal and external LDAR team in OMV Austria and OMV Petrom uses advanced technologies for regular site screenings. In August 2025, OMV submitted its first LDAR reports to the respective appointed competent authorities of the Member States, as along with the annual reports with the source-level quantification of methane emissions using generic emission factors, in order to comply with the EU MER. In addition, OMV submitted its first annual OGMP report and achieved Gold Standard Pathway status for the 2025 reporting year, showcasing the Company's strong commitment to methane management. In 2025, Upstream (OMV Energy) made further progress with methane emission monitoring and reporting, performing additional source-level methane measurements and quantification in their assets.

(7.61) Does your organization conduct leak detection and repair (LDAR) or use other methods to find and fix fugitive methane emissions from oil and gas production activities?

Select from:

☒ Yes

(7.61.1) Describe the protocol through which methane leak detection and repair or other leak detection methods, are conducted for oil and gas production activities, including predominant frequency of inspections, estimates of assets covered, and methodologies employed.

OMV systematically monitors and controls fugitive methane emissions and other non-methane volatile organic compounds (NMVOCs) through Leak Detection and Repair (LDAR) programs. Routine audio, visual, and olfactory inspections, along with soap bubble testing and optical gas imaging and other technologies, are used for leak detection. Advanced methods such as infrared cameras and collaborations with third parties using drones, satellite data, and acoustic leak imaging enhance monitoring efforts. Leaks are repaired based on prioritization and risk assessments. Key initiatives include the pipeline integrity program and modernizing facilities like compressor stations. OMV implements LDAR programs in both upstream (OMV Energy) and downstream (OMV Fuels) sectors to address fugitive emissions. LDAR programs in OMV Energy align with the GHG Management Framework, the OGMP 2.0 Framework of the UN program for the reduction of methane emissions, which OMV joined in April 2024, and with the EU MER (Methane Emissions Regulation), which came into force in August 2024 for the sites that are subject matter. An internal and external LDAR team in OMV Austria and OMV Petrom uses advanced technologies for regular site screenings. In August 2025, OMV submitted its first LDAR reports to the respective appointed competent authorities of the Member States, as along with the annual reports with the source-level quantification of methane emissions using generic emission factors, in order to comply with the EU MER. In addition, OMV submitted its first annual OGMP report and achieved Gold Standard Pathway status for the 2025 reporting year, showcasing the Company's strong commitment to methane management. In 2025, Upstream (OMV Energy) made further progress with methane emission monitoring and reporting, performing additional source-level methane measurements and quantification in their assets.

(7.62) If flaring is relevant to your oil and gas production and processing activities, describe your organization's efforts to reduce flaring, including any flaring reduction targets.

(7.62.1) Occurrence of flaring in production and/or processing activities

Select from:

☒ Yes, both non-emergency and emergency flaring

(7.62.2) Flaring reduction targets

Select from:

☒ Flaring target reported in 7.54.2

(7.62.3) Efforts to reduce flaring

Select all that apply

- ☒ Improvements in efficiency
- ☒ Upgrading equipment
- ☒ Other, please specify :1. Projects to ensure gas sales specifications 2. Flare gas recovery & recompression 3. Gas to Power and Combined Heat & Power projects

(7.62.4) Involvement in voluntary flaring reduction programs

Select all that apply

- ☒ World Bank Zero Routine Flaring by 2030

[Fixed row]

(7.73) Are you providing product level data for your organization's goods or services?

Select from:

- ☒ No, I am not providing data

(7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

- ☒ Yes

(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

(7.74.1.1) Level of aggregation

Select from:

- ☒ Product or service

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

☒ Other, please specify :Green Loan Principles

(7.74.1.3) Type of product(s) or service(s)

Power

☒ Other power, please specify :Chemical Recycling of plastic waste (ReOil®)

(7.74.1.4) Description of product(s) or service(s)

OMVs patented chemical recycling technology ReOil®, converts hard-to recycle plastic waste into circular feedstock for the production of new plastics. With ReOil®, plastic waste, that is not suitable for mechanical recycling and would be sent to incineration or landfill, is turned into a valuable resource. Since 2018, a ReOil® pilot plant with a capacity of 100 kg/h is installed in the refinery in Schwechat, Austria, to turn mixed post-consumer plastic waste under moderate pressure operating temperatures, into pyrolysis oil, which serves as a raw material for producing sustainable chemicals. These chemicals can then be converted into various essential everyday applications, including food packaging, healthcare products, and components for electric vehicles. The feedstock for the ReOil®, is being sourced in Austria and neighboring countries and consists mainly of mixed polyolefins. Since beginning of 2025, a ReOil® plant with up to 16,000 metric tons p.a. capacity is continuously operating. This plant is ISCC+ certified and fully integrated into the Schwechat refinery. OMV entered into its first-ever green loan agreement to finance this next step towards circular economy.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Other, please specify :Life-Cycle-Assessment basket-of-products approach

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

☒ Cradle-to-gate

(7.74.1.8) Functional unit used

The functional unit is the treatment of 1 tonne pre-sorted post-consumer waste / commercial and industrial waste for the production of x tonnes polymer recyclates along with the generation of energy (power and heat). 1.113 metric tons CO₂eq / FU, which refers to 34% of CO₂eq savings per functional unit

(7.74.1.9) Reference product/service or baseline scenario used

No

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

☒ Cradle-to-gate

(7.74.1.11) Estimated avoided emissions (metric tons CO₂e per functional unit) compared to reference product/service or baseline scenario

1.113

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

The greenhouse gas emission (GHG) emissions savings are based on a Life-Cycle-Assessment (LCA) conducted by Fraunhofer UMSICHT and Fraunhofer ICT, in accordance with international standards ISO 14040 and 14044 for the "basket-of-product" approach. The assessment underwent an independent peer review by experts from Sphera, CE Delft and ifeu.

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

0.21

Row 2

(7.74.1.1) Level of aggregation

Select from:

☒ Product or service

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

☒ The EU Taxonomy for environmentally sustainable economic activities

(7.74.1.3) Type of product(s) or service(s)

Power

☒ Other power, please specify :Biofuels (SAF)

(7.74.1.4) Description of product(s) or service(s)

SAF is a renewable alternative to conventional jet fuel that is fully compatible with existing aircraft engines and airport infrastructure and can reduce lifecycle greenhouse gas emissions by more than 80% compared with conventional kerosene. OMV started to produce SAF at the Schwechat Refinery in Austria already in 2022 to stimulate the market at an early stage. In 2025, following the introduction of the ReFuelEU Aviation mandate requiring a minimum 2% SAF blend, OMV further strengthened its supply capabilities through the commissioning of dedicated SAF blending facilities in Austria and Germany. As part of its pathway to net-zero emissions by 2050 and its ambition to become a leading SAF supplier by 2030, OMV reached a significant milestone with the start of construction of a large-scale SAF/HVO production plant at its Petrobrazi refinery in Romania. With an annual production capacity of 250 kta the facility is expected to establish OMV as the first major producer of renewable fuels in Southeast Europe. OMV is well positioned to achieve compliance with the ReFuelEU Aviation requirements while enabling customers to achieve their sustainability goals and accelerate the adoption of SAF beyond regulatory obligations.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Other, please specify :Calculation of the GHG emission is based on the EU REDII/III AnnexV methodology, as basis for the ISCC EU requirements (ISCC EU 205 GHG-Emission), is our standard for EU compliant material.Under the EU REDII/III), entire fuel value chain is assessed

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

☒ Cradle-to-gate

(7.74.1.8) Functional unit used

1 MJ of SAF (emissions are calculated according to EU RED in gCO₂e/MJ)

(7.74.1.9) Reference product/service or baseline scenario used

The fossil reference value is 94gCO₂e/MJ which is the basis for calculating the emission savings according to EU RED.

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

☒ Cradle-to-gate

(7.74.1.11) Estimated avoided emissions (metric tons CO₂e per functional unit) compared to reference product/service or baseline scenario

3.3

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

Based on the assumption that we achieve at least 80% savings compared to the fossil reference value (94gCO₂e/MJ (fossil baseline) *44 MJ/kg (LHV) *80% (min saving))

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

0

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

☒ No

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Water withdrawals are directly measured by flow meters or estimated. The total of all water withdrawals at site level are reported in OMV's HSSE reporting system on a quarterly basis.

(9.2.4) Please explain

For water wells we operate ourselves, we have volume metering devices installed at the point where the water enters our operations. Smaller amounts of water supplied via a local water network, or a third party are tracked and monitored via third party measurements (invoices received from the supplier). In major operations we have also metering devices at single plants. With these metering devices we know how much water we withdraw, which kind of water and what our main consumers are.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Water withdrawals are directly measured by flow meters or estimated. The total of all water withdrawals by source at site level are reported in OMV's HSSE reporting system on a quarterly basis.

(9.2.4) Please explain

We have metering devices installed, for all kind of waters, will it be fresh ground water, fresh surface water, brackish/ sea water or water from public supply; to measure the volumes by source.

Produced water associated with your oil & gas sector activities - total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Produced water volumes are directly measured and estimated along with the oil & gas production process. The total volume of produced water generated at site level is reported in OMV's HSSE reporting system on a quarterly basis.

(9.2.4) Please explain

In the process of producing oil and gas we always want to know the ratio of oil/gas to water, this is a key parameter of every oil/gas field. We also have to manage and handle produced water. In many cases produced water is a valuable resource/ mean as we can re-inject it into the well (after treatment) to stabilize or create an adequate pressure in the oil and gas reserves.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

The water withdrawal quality is monitored at site level and analyzed according to respective analytical methods.

(9.2.4) Please explain

We measure the quality of water withdrawals, on a regular basis (annually, quarterly); we need to know the quality of the water for use in our operations and even more for domestic use.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Water discharges are directly measured by flow meters. The total of all water discharges at site level are reported in OMV's HSSE reporting system on a quarterly basis.

(9.2.4) Please explain

Volumes of Water discharges are measured. If water is discharged to third party the volumes are measured as the contract / price is based on volume and quality. Volume and quality of water discharged to waste water treatment plants are also measured as such treatment plants are often operated together with partners and therefore volume and quality are part of the contract. Volume and quality are also measured if we discharge to surface water (creek, river, sea) because we are responsible to not negatively impact the environment and due to legal obligations.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Water discharges are directly measured by flow meters and destination. The total of all water discharges by destination at site level are reported in OMV's HSSE reporting system on a quarterly basis.

(9.2.4) Please explain

Volumes of Water discharges are measured. If water is discharged to third party the volumes are measured as the contract / price is based on volume and quality. Volume and quality of water discharged to waste water treatment plants are also measured as such treatment plants are often operated together with partners and therefore volume and quality are part of the contract. Volume and quality are also measured if we discharge to surface water (creek, river, sea) because we are responsible to not negatively impact the environment and due to legal obligations.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Water discharges are directly measured by flow meters and destination. The total of all water discharges by destination at site level are reported in OMV's HSSE reporting system on a quarterly basis. Water discharges by treatment methods are monitored at site level.

(9.2.4) Please explain

Volumes of Water discharges are measured. If water is discharged to third party the volumes are measured as the contract / price is based on volume and quality. Volume and quality of water discharged to waste water treatment plants are also measured as such treatment plants are often operated together with partners and therefore volume and quality are part of the contract. Volume and quality are also measured if we discharge to surface water (creek, river, sea) because we are responsible to not negatively impact the environment and due to legal obligations.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

For bigger discharges, parameters like pH, Temperature, conductivity are measured continuously with online measurement. For smaller discharges, these parameters are analysed with routine sampling protocols.

(9.2.4) Please explain

For all discharges, the water quality (standard effluent parameters, such as pH, conductivity, as well as relevant pollutants), is monitored as defined in the respective discharge permits.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a month

(9.2.3) Method of measurement

Relevant pollutants are measured using sampling and lab analysis at a frequency consistent with established monitoring plans. This is done internally (in many cases on a monthly basis) and externally by an accredited lab (in many cases once per year).

(9.2.4) Please explain

For all discharges, the water quality (standard effluent parameters, such as pH, conductivity, as well as relevant pollutants), is monitored as defined in the respective discharge permits.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

☒ 76-99

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

For bigger discharges, parameters like pH, Temperature, conductivity are measured continuously with online measurement. For smaller discharges, these parameters are analysed with routine sampling protocols.

(9.2.4) Please explain

Temperature is one of the key parameters when determining the quality of discharged water. For major discharges water temperature is measured, for smaller discharges, temperature measurements might not be in place.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

The total volume of water consumption is calculated quarterly based on measured withdrawal and discharge.

(9.2.4) Please explain

Water consumption is reported and monitored.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Where applicable, this parameter is measured or calculated based on measurements.

(9.2.4) Please explain

We have two kinds of waters to be recycled / reused. Produced water is reused/ re-injected to maintain the pressure in oil reserves. This amount of water is measured. Water is also recycled / reused in our operations.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

☒ 100%

(9.2.2) Frequency of measurement

Select from:

☒ At least once a quarter

(9.2.3) Method of measurement

Status on the provision of WASH services are measured through audits.

(9.2.4) Please explain

We have washing facilities on all our sites, on the majority of sites we have showers, only on very small sites we have a washing basin only. We feel responsible for all our workforce, will it be own employees or contractor employees. We do take care of our people. We signed of the UN Global Compact Code of Conduct, incl. Humans Rights and get audited periodically. We always got confirmation and very positive results from independent, internationally reputable auditors, for all our sites and operations.

[Fixed row]

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.1) Volume (megaliters)

604020

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ About the same

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ No/minimal change in business activity

(9.2.2.4) Five-year forecast

Select from:

☒ Unknown

(9.2.2.5) Primary reason for forecast

Select from:

☒ Other, please specify :Currently, no forecasting in place

(9.2.2.6) Please explain

Currently, no forecasting in place. Thresholds for the “comparison with previous reporting year” and “five-year forecast”: Deviation +/- 10% about the same; Deviation between +/- 11-20% higher / lower; Deviation +/- 20% much higher / lower.

Total discharges

(9.2.2.1) Volume (megaliters)

598593

(9.2.2.2) Comparison with previous reporting year

Select from:

☒ Higher

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

☒ Change in accounting methodology

(9.2.2.4) Five-year forecast

Select from:

☒ Unknown

(9.2.2.5) Primary reason for forecast

Select from:

☒ Other, please specify :Currently, no forecasting in place

(9.2.2.6) Please explain

Changes in discharges are mainly driven by improvements in one of our subsidiaries' data collection and reporting tools, replacing estimates and extrapolations with measured and invoiced data. The reported volume includes rainwater discharged by OMV, which is not counted in the total withdrawals. Currently, no forecasting in place. Thresholds for the "comparison with previous reporting year" and "five-year forecast": Deviation +/- 10% about the same; Deviation between +/- 11-20% higher / lower; Deviation +/- 20% much higher / lower.

Total consumption

(9.2.2.1) Volume (megaliters)

65423

(9.2.2.2) Comparison with previous reporting year

(9.2.10) Provide details of your organization's emissions of nitrates, phosphates, pesticides, and other priority substances to water in the reporting year.

(9.2.10.1) Emissions to water in the reporting year (metric tons)

5.7

(9.2.10.2) Categories of substances included

Select all that apply

☒ Phosphates

(9.2.10.4) Please explain

For all discharges, the water quality (standard effluent parameters, such as pH, conductivity, phosphates, as well as relevant pollutants), is monitored as defined in the respective discharge permits. Total numbers on OMV group level are currently not available. As part of the European Sustainability Reporting Standard requirements, we aim to review our monitoring and reporting processes.

[Fixed row]

(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?

Direct operations

(9.3.1) Identification of facilities in the value chain stage

Select from:

☒ No, we have not assessed this value chain stage for facilities with substantive water-related dependencies, impacts, risks, and opportunities, but we are planning to do so in the next 2 years

(9.3.4) Please explain

During the materiality assessment process for OMV's Sustainability Statement, OMV environmental experts evaluated business activities for actual and potential impacts, risks, and opportunities related to water and marine resources. The impacts, risks, and opportunities were assessed based on a robust environmental governance framework, with business division-level information considered for the top-down qualitative assessment. To identify operations with nature sensitivities, such as activities in areas at risk of water scarcity or water stress, Verisk Maplecroft's Water Stress Index was considered, the aim being to screen the state of nature including water resources. Risk assessments conducted so far indicate a low to medium water risk level for the majority of OMV's own operations. However, the assessment process to scientifically delimit areas at water risk is still ongoing, with further details to be analyzed based on the LEAP (Locate, Evaluate, Assess, Prepare) approach and other tools such as the WWF Water Risk Filter and the Aqueduct Water Risk Atlas tool from the World Resources Institute (WRI).

Upstream value chain

(9.3.1) Identification of facilities in the value chain stage

Select from:

☒ No, we have not assessed this value chain stage for facilities with substantive water-related dependencies, impacts, risks, and opportunities, but we are planning to do so in the next 2 years

(9.3.4) Please explain

During the materiality assessment process for OMV's Sustainability Statement, OMV environmental experts evaluated business activities for actual and potential impacts, risks, and opportunities related to water and marine resources. The impacts, risks, and opportunities were assessed based on a robust environmental governance framework, with business division-level information considered for the top-down qualitative assessment. The value chain was also included in the evaluation. However, the immediate focus of our organisation in the recent years was on our own operations, but we aim to strengthen engagement in the value chain in the next years.

[Fixed row]

(9.4) Could any of your facilities reported in 9.3.1 have an impact on a requesting CDP supply chain member?

Select from:

☒ No facilities were reported in 9.3.1

(9.5) Provide a figure for your organization's total water withdrawal efficiency.

(9.5.1) Revenue (currency)

24308000000

(9.5.2) Total water withdrawal efficiency

40243.70

(9.5.3) Anticipated forward trend

The total water withdrawal efficiency is calculated as water withdrawal including Borealis divided by revenues excluding Borealis. This approach is applied due to diverging scope definitions relating to the reclassification of Borealis as "held for sale" and "discontinued operations" for IFRS revenue recognition and water performance metrics. No forecast is available to anticipate a forward trend.

[Fixed row]

(9.11) Do you calculate water intensity for your activities associated with the oil & gas sector?

Select from:

☒ Yes

(9.11.1) Provide water intensity information associated with your activities in the oil & gas sector.

Row 1

(9.11.1.1) Business division

Select all that apply

☒ Upstream

(9.11.1.2) Water intensity value (m3/denominator)

0.23

(9.11.1.3) Numerator: water aspect

Select from:

☒ Much lower

(9.11.1.6) Five-year forecast

Select from:

☒ Lower

(9.11.1.7) Use of the metric within the organization

Select all that apply

☒ Reference for future water targets and business planning

(9.11.1.8) Please explain

The freshwater withdrawal intensity is calculated as freshwater withdrawn per tonnes of oil equivalent produced, and is a relevant indicator of water efficiency. The freshwater withdrawal intensity of OMV's Upstream operated facilities is much lower compared to the previous year (around -30%) due to consistent operational processes improvement. The Intensity is used internally for benchmark as far as comparability of sites are given. We intend to decrease our future Upstream water intensity by decreasing freshwater withdrawals in existing operated facilities. Every location in the OMV Group must implement, and maintain a Water Management Plan, which should include, among other elements, water conservation and water efficiency measures including an action plan with expected result to have lower water intensity. Thresholds for the "comparison with previous reporting year" and "five-year forecast": Deviation +/- 10% about the same; Deviation between +/- 11-20% higher / lower; Deviation +/- 20% much higher / lower.

(9.11.1.7) Use of the metric within the organization

Select all that apply

☒ Reference for future water targets and business planning

(9.11.1.8) Please explain

The freshwater withdrawal intensity is calculated as freshwater withdrawn per tonnes of throughput, and is a relevant indicator of water efficiency. The freshwater withdrawal intensity of OMV's refineries is higher compared to the previous year (around 17%) Thresholds for the "comparison with previous reporting year" and "five-year forecast": Deviation +/- 10% about the same; Deviation between +/- 11-20% higher / lower; Deviation +/- 20% much higher / lower.

[Add row]

(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?

	Products contain hazardous substances
	Select from: ☒ Yes

[Fixed row]

(9.13.1) What percentage of your company's revenue is associated with products containing substances classified as hazardous by a regulatory authority?

Row 1

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

☒ Annex XVII of EU REACH Regulation

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:

☒ Don't know

(9.13.1.3) Please explain

We have established appropriate processes and workflows to ensure our compliance with EU regulations on the Registration, Evaluation, and Authorization of Chemicals (REACH) and on the Classification, Labelling, and Packaging (CLP) of substances and mixtures, as well as with the Toxic Substances Control Act in the United States. We are committed to maintaining and updating our mandatory registrations to keep up with relevant regulatory developments. To this end, we closely follow the guidance published by the European Chemicals Agency and participate in the REACH consortia (Concawe, Lower Olefins and Aromatics, Fuel Ethers, Co-processed Refinery Products, Phenol and Derivatives, etc.), as well as in working groups through oil and chemical industry trade associations. In addition to keeping REACH registrations up to date, Borealis also follows the developments on authorizations and restrictions under REACH.

[Add row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

☒ No, and we do not plan to address this within the next two years

(9.14.6) Primary reason for not classifying any of your current products and/or services as low water impact

Select from:

☒ Not an immediate strategic priority

(9.14.7) Please explain

Sustainable energy solutions play a major role in our transformational path to meet society's energy needs. The OMV Group is leveraging its existing expertise and collaborating with start-ups and research institutions to find innovative technological solutions that will drive the energy transition and pave the way to becoming a net-zero company by 2050. In our Energy segment, we will build up of renewable energy production (including geothermal, PV, and wind). PV and wind energy production in particular have a considerably lower impact on water. We are currently developing new processes for the identification and assessment of water-related impacts, dependencies, risk & opportunities, but currently we do not plan to classify any of our products or services as low water impact.
[Fixed row]

☑ Underway

(9.15.1.12) Global environmental treaties/initiatives/frameworks aligned with or supported by this target

Global environmental treaties/initiatives/frameworks aligned with or supported by this target

☑ Sustainable Development Goal 6

(9.15.1.13) Explain target coverage and identify any exclusions

The target covers all withdrawals of freshwater in OMV direct operations. Freshwater is used for processes such as drilling, steam generation, and cooling, among others

(9.15.1.14) Plan for achieving target, and progress made to the end of the reporting year

Water Management Plans (WaMP) are tools for addressing water-related topics, issues & tasks, with the aim of improving water management performance. They provide information about current water uses & chart a course for water efficiency improvements, conservation activities & water reduction goals. Majority of location in OMV has developed its water management plan and has now started its implementation WaMP will be improved to cover the ISO 46001 requirements

(9.15.1.18) Further details of target

We have set a target for 2025 & 2030 to reduce the freshwater withdrawal in our own direct operations, however, we did not yet establish a quantitative target value. We are monitoring the quantitative metric and compare with the base year in order to assess the target status. A project to set a quantitative target value is already underway, with related activities in progress. The project includes a systematic approach to water assessment, target setting and management. OMV is applying the TNFD's LEAP approach (Locate, Evaluate, Assess, and Prepare), which has been developed to address all nature-related issues.

☒ Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

☒ Waste data

☒ Fuel consumption

☒ Methane emissions

☒ Renewable fuel consumption

☒ Target-setting methodology

☒ Emissions breakdown by country/area

- ✓ Base year emissions
- ✓ Progress against targets
- ✓ Electricity/Steam/Heat/Cooling consumption
- ✓ Renewable Electricity/Steam/Heat/Cooling generation
- ✓ Year on year change in absolute emissions (Scope 3)
- ✓ Renewable Electricity/Steam/Heat/Cooling consumption
- ✓ Year on year change in emissions intensity (Scope 3)
- ✓ Emissions breakdown by business division
- ✓ Electricity/Steam/Heat/Cooling generation
- ✓ Year on year change in absolute emissions (Scope 1 and 2)
- ✓ Year on year change in emissions intensity (Scope 1 and 2)

(13.1.1.3) Verification/assurance standard

General standards

- ✓ IDW AsS 821: IDW Assurance Standard: Generally Accepted Assurance Principles for the Audit or Review of Reports on Sustainability Issues
- ✓ International Sustainability and Carbon Certification (ISCC)
- ✓ ISAE 3000

Climate change-related standards

- ✓ Verification under the EU Emissions Trading Scheme (EU ETS) Directive and EU ETS related national implementation laws

(13.1.1.4) Further details of the third-party verification/assurance process

The majority of the data that is disclosed in CDP is audited by our external auditor. While the KPIs may not be audited one for one, our auditor is responsible and required to audit the comparability, accuracy, timeliness, clarity and reliability of the data that is reported in our non-financial report. Additionally, the auditor is also responsible for ensuring that the process through which our data is collected, verified and reported is consistent and robust. Reference to various verification standards are made in our external reports or on our website e.g. ISCC. The assurance can be found in our 2025 OMV 2025_ Combined Report.pdf

(13.1.1.5) Attach verification/assurance evidence/report (optional)
