Call to Tender

Digital Drilling Optimization & Analytics Services

OMV Exploration & Production GmbH ("OMV") is interested in concluding a contract for "Digital Drilling Optimization & Analytics Services"

Description of the scope of work:

OMV wants to optimize the drilling performance and costs for future wells. To achieve this, we will use available technologies, methodologies, and operational experience related to real-time and predictive drilling performance optimization, with a particular focus on Non-Productive Time (NPT) reduction, drilling efficiency improvement and potential drilling problem detection.

We foresee the services being grouped into the following categories:

- On-demand studies (e.g. NPT/ILT optimization, Harmonics and DrillString Dynamics, etc.)
- Safety & Drilling Optimization – identifying, preventing, and providing solutions during drilling (e.g. stuck pipe prevention)
- Performance Analysis (e.g. KPIs, connection time, etc.).

OMV now invites eligible companies to indicate their interest in providing the above-mentioned services. Interested companies should provide information demonstrating that they have the required qualifications and relevant experience to perform the contract (brochures, description of similar assignments, experience in similar conditions, availability of appropriate skills among staff, etc.).

The companies which will express their interest in participating in the procedure organized by OMV will be invited to the sourcing event via SAP Ariba (supplier's prior registration in OMV's database is required, unless it is already available).

Further information can be requested per email at the address below.

Expressions of interest must be delivered in a written form to the address below (e-mail) by 16th of October 2026, 16.30 CEST.

The Call to Tender shall expire after the above-mentioned date.
