Sustainability
At OMV, sustainability means creating long-term value for our customers and shareholders by being innovative and an employer of choice.

We conduct our business in a responsible way, respecting the environment and adding value to the societies in which we operate.
Responsible and sensible use of oil and gas

Oil is a valuable resource

- **Oil as an energy source:** when renewable energies are not available or affordable, or when a guarantee is needed that supplies are available in sufficient quantity (e.g. jet fuels)

- **Oil as a raw material:** premium materials and components for important products used in everyday life (petrochemicals)

- **Oil as a product produced synthetically:** as part of sustainable circular economy (plastics recycling)
Gas is an enabler for the energy transition to a lower-carbon energy system

Electricity production: By switching from coal to gas immediate CO₂ savings of 50%.

Transport sector: Gas produces 20–95% less CO₂ emissions and almost no particulate matter emissions. The technology and infrastructure are available.

2018 | 2030 | 2050

Heating and cooling: Gas is a clean and affordable low-carbon solution.

Storage system and pipeline infrastructure: Connection to the power infrastructure via Power2Gas

Climate-neutral gas: Hydrogen, pyrolysis and technologies for carbon capture and usage
Growth strategy is implemented in a safe, responsible and carbon efficient manner
